CONTENTS

		Introduction
Section	A:	The Composition of Molasses
Section	B:	Principles of Molasses Analysis
Section	C:	General Laboratory Notes
Section	D:	Preparation and Standardisation of Fehling Solution
Section	E.1:	Determination of Reducing Sugars – Lane-Eynon Volumetric Method
	E.2:	Determination of Reducing Sugars – Munson & Walker Gravimetric Method
Section	F.1:	Determination of Sucrose by Chemical Reduction before and after inversion with Hydrochloric Acid – Lane-Eynon Volumetric Method
	F.2:	Determination of Sucrose by Polarisation before and after inversion with Hydrochloric Acid – Jackson & Gillis Method No. IV
Section	G.1:	Determination of Raffinose – Chromatographic Method I (Paper)
	G.2:	Determination of Raffinose – Chromatographic Method II (Thin Layer)
Section	H:	Determination of Unfermentable Reducing Substances
Section	I.1:	Determination of Solids by Vacuum Sand Drying
	1.2:	Determination of Brix by Hydrometer (double dilution)
	1.3:	Determination of Brix by Specific Gravity Bottle (double dilution)
	1.4:	Determination of Brix by Refractometer (direct)
Section	J:	Determination of Sulphated Ash
Section	K:	Determination of Sulphur Dioxide – Monier-Williams Method
Section	L:	Determination of Gelling Properties
Section	M:	Determination of Viscosity
Tables:	1:	Lane-Eynon Factors A. U.M.T.C. Computed Tables B. Published Tables
	2:	Hammond Table for the Munson & Walker Method
	3:	Degrees Brix – Specific Gravity Conversion Table
	4:	Refractive Index – Refractometer Brix Conversion Table
	5:	Viscosity Conversion Chart
	6:	Temperature Conversion Table (°C – °F)
	7:	Relative Atomic Weights.
