

CONTENTS

Chapter 1. Quantitative determination of know additives	1
1.1 General discussion	1
1.2 Direct spectroscopy of polymer films	2
1.3 Preliminary solvent extraction of additives from polymer	4
1.4 Determination of phenolic antioxidants	8
1.5 Determination of amine antioxidants	26
1.6 Determination of plasticizers	30
1.7 Determination of ultraviolet absorbers	39
1.8 Determination of Polygrad in styrene-butadiene rubbers and latexes	44
1.9 Determination of organic peroxides	46
1.10 Determination of styrene, acrylonitrile and methacrylonitrile monomers	55
Chapter 2. Application of thin-layer and column chromatography to the separation	64
Chapter 3. Application of chromatography followed by spectroscopy to the identification and determination of unknown additive mixtures	79
3.1 Column chromatography	80
3.2 Paper chromatography	91
3.3 The powerful combination – thin-layer chromatography and spectroscopy	96
Chapter 4. Application of gas chromatography	122
4.1 Characterization and determination of additives	122
4.2 Characterization and determination of monomers and volatile impurities	135
References	154
Index	161
