Contents

Preface *iii*

1 Basic Concepts of Surface and Colloid Chemistry **1**
- I. Introduction 1
- II. Interfaces—Surface Energy and Surface Tension 2
- III. Surface-Active Molecules—Self-Assembly in Water and Monomolecular Surface Films 2
- IV. Interfaces of Solids—Critical Surface Tension of Wetting 4
- V. The Electric Double Layer 5
- VI. Monomolecular Films at the Air/Water and Oil/Water Interfaces 8
- VII. Self-Assembly of Lipid Molecules in Water 11
- VIII. Water and the Hydration Force 16
- IX. Colloidal Aspects of Proteins 17
- X. Colloidal Structures—Gels, Dispersions, Polyphasic Aqueous Systems, and Foams 19
- XI. Flow Properties 21
- XII. Porous Structures 22
- Textbooks Recommended for Further Study 29
- References 29

2 Physicochemical Behavior of the Components of Wheat Flour **31**
- I. Introduction 31
- II. Lipids 31
- III. Proteins 45
- IV. Starch 96
- V. Nonstarch Polysaccharides 129
- References 139

3	**Interactions Between Components**		**161**
	I.	Introduction	161
	II.	Protein–Lipid Interactions	161
	III.	Protein–Starch Interactions	165
	IV.	Starch–Lipid Interactions	171
		References	195
4	**Components in Other Cereals**		**203**
	I.	Introduction	203
	II.	Properties of the Components	203
		References	233
5	**Flour**		**241**
	I.	Introduction	241
	II.	Grain Structure	241
	III.	Milling	247
	IV.	Flour Composition	254
		References	256
6	**Dough**		**261**
	I.	Introduction	261
	II.	The Continuous Gluten Phase	261
	III.	The Dispersed Gas Phase	295
	IV.	Air/Water Interface	302
	V.	Rheological Behavior of the Dough	304
	VI.	The Structure of the Dough	310
		References	314
7	**Bread**		**325**
	I.	Effect of Heat	325
	II.	Bread Structure	340
	III.	Baking Behavior of Whole Wheat Flour and Non-Wheat Cereals	346
	IV.	Staling	349
		References	363
