Acknowledgment xvii

Chapter 1. History of the Development of Engineering Polymers 1

1.1 Introduction—Scope 1
1.2 Natural Polymers 2
1.3 Pre-World War I Polymers 2
1.4 Pre-World War II Polymers 3
1.5 Engineering Thermoplastics 4
1.6 Nylons 4
1.7 Polyesters 6
1.8 Polyacetals 9
1.9 Polysulfones 9
1.10 Polysulfides 10
1.11 PEEK 10
1.12 PPO 10
1.13 Polymeric Blends 10
1.14 Polyimides 11
1.15 Styrene Polymers 12
1.16 PVC 13
1.17 Fluorocarbon Polymers 13
1.18 Phenol-Formaldehyde 14
1.19 Amino Resins 14
1.20 Epoxy Resins 14
1.21 Cyanate Polymers 15
1.22 Polyurethanes 15
1.23 Silicones 15
1.24 Polyphosphazenes 16
1.25 Elastomers 16
1.26 Thermoplastic Elastomers 16
1.27 Future Outlook 17
1.28 Glossary 21
1.29 References 27

Chapter 2. Phenolic, Furan, Urea, and Melamine Plastics 29

2.1 PF Polymers 29
2.2 Processing of Phenolic Polymers 31
2.3 Molding of Phenolic Polymers 32
2.4 Wood-Based Composites 33
2.5 Compounding of PF 33
2.6 Properties of PF 34
2.7 Applications of PF 34
2.8 Phenolic Laminates 35
2.9 Toxicity of PF 36
2.10 Furan Plastics 36
2.11 Production of Amino Resins, Adhesives, and Laminates 37
2.12 Amino Resin Molding Compounds 38
2.13 Toxicity 38
2.14 Glossary 39
2.15 References 41

Chapter 3. Thermoset Polyesters 43

3.1 Introduction 43
3.2 Design Considerations 43
3.3 Reinforcement Concepts 44
3.4 Coupling Agents 45
3.5 Reinforcements 45
3.6 Diallyl Phthalate 46
3.7 Diallyl Diglycol Carbonate 49
3.8 Alkyd Resins 49
3.9 Glossary 53
3.10 References 57

Chapter 4. Unsaturated Polyester, Epoxy, and Polyimide Resins 59

4.1 Introduction 59
4.2 Unsaturated Polyester (Polyethylene Maleate) Resin 59
4.3 Other Unsaturated Polyester Resins 61
4.4 Initiators (Catalysts) for Curing Unsaturated Polyesters 62
4.5 Vinyl Ester 62
4.6 Epoxy Resins 62
4.7 Thermosetting (PIs) 64
4.8 Properties of Composites 65
4.9 Bulk Molding 67
4.10 Sheet Molding 68
4.11 Hand Lay-Up 68
4.12 Spray-Up 68
4.13 Filament Winding 68
4.14 Pultrusion 69
4.15 Applications 70
4.16 Glossary 71
4.17 References 75

Chapter 5. Inorganic Polymers 77

5.1 Glass 77
5.2 Hydraulic Cement 79
5.3 Silicones 80
5.4 Polyphosphazenes 82
5.5 Polysulfur Nitride 83
5.6 Other Inorganic Polymers 83
5.7 Glass Structures 84
5.8 Concrete Structure 84
5.9 Glossary 85
5.10 References 88

Chapter 6. Elastomers for Engineering Applications 91

6.1 Introduction 91
6.2 Characteristics of Elastomers 91
6.3 Neoprene 93
6.4 Polybutadienes 94
6.5 Polysulfide Elastomers 95
6.6 Silicone Elastomers 96
6.7 Acrylic Elastomers 97
6.8 Ethylene-Propylene Elastomers 97
6.9 IIR 97
6.10 Fluorinated Elastomers 99
6.11 Elastomeric Copolymers of Styrene and Butadiene (SBR) 100
6.12 Elastomeric Copolymers of Acrylonitrile and Butadiene (NBR) 101
6.13 TPEs 102
6.14 Glossary 108
6.15 References 113

Chapter 7. Styrene Polymers 115

7.1 Introduction 115
7.2 SAN 115
7.3 Styrene-Maleic Anhydride Copolymers 117
7.4 SMA-PC Alloys 117
7.5 High-Barrier Polymers 117
7.6 ABS Terpolymer 119
7.7 Acrylic-Styrene-Acrylonitrile Terpolymers 122
7.8 Other AN Copolymers 122
7.9 Thermoforming 123
7.10 Glossary 127
7.11 References 129

Chapter 8. The Acrylics 131

8.1 Introduction 131
8.2 Acrylic Ester Polymers 132
8.3 Cyanoacrylic Ester Polymers 132

8.4 Polyacrylamide 133
8.5 Flocculants 133
8.6 Enhanced Oil Recovery 133
8.7 Polyalkyl Methacrylates 134
8.8 Optical Properties of Acrylics 135
8.9 Electrical Properties 135
8.10 Glazing Materials 135
8.11 Glossary 139
8.12 References 142

Chapter 9. Polycarbonates 143

9.1 Introduction 143
9.2 Optical Properties of PC 144
9.3 Effect of Moisture on PC 145
9.4 Electrical Properties of PC 145
9.5 PC Sheet 145
9.6 Effect of Variables on Physical Properties of PC 146
9.7 Effect of Temperature on PC 147
9.8 Flammability 147
9.9 PC Foams 148
9.10 Reinforced PC 148
9.11 Polyester Carbonates 148
9.12 Reinforced PC 148
9.13 PC Blends 148
9.14 Glossary 150
9.15 References 151

Chapter 10. Acetals 153

10.1 Introduction 153
10.2 Extrusion of POM 154
10.3 Injection Molding of POM 154
10.4 Machining and Buffing of POM 156
10.5 Properties of POM 157
10.6 Modified POM 157
10.7 Electrical Properties of POM 157
10.8 Flammability of POM 157
10.9 Effect of Water on POM 159
10.10 Chemical Properties of POM 159
10.11 Resistance of POM to Creep and Fatigue Stress 160
10.12 Health and Safety Factors 160
10.13 Glossary 161
10.14 References 163

Chapter 11. Thermoplastic Aromatic Polyesters 165

11.1 Introduction 165
11.2 Molding Resins 166

11.3 Physical Properties of Engineering Polymers 167
11.4 Effect of Molecular Structure on Properties of Polyesters 168
11.5 Other Thermoplastic Polyesters 169
11.6 Crystallinity 171
11.7 Reinforcements 172
11.8 Thermal and Flame Resistance 173
11.9 Electrical Properties 173
11.10 Processing of Polyesters 173
11.11 Applications 174
11.12 Glossary 175
11.13 References 178

Chapter 12. Aliphatic and Aromatic Polyamides (Nylons) 179

12.1 Introduction 179
12.2 Processing of Nylon 6,6 180
12.3 Properties of Nylon 6,6 and Nylon 6,12 181
12.4 Properties of Nylon 6, Nylon 7, Nylon 11, and Nylon 12 182
12.5 Effect of Humidity on Nylon 184
12.6 Nylon Powder Coating 185
12.7 Aramids 185
12.8 Glossary 186
12.9 References 188

Chapter 13. Isocyanate Polymers 189

13.1 Introduction 189
13.2 RIM 189
13.3 Other Reactants 190
13.4 Properties of PURs 190
13.5 Toxicity of PURs 191
13.6 Applications of PURs 192
13.7 Isocyanate Polymers and Copolymers 193
13.8 Cyanate Ester Polymers 193
13.9 Polyureas 194
13.10 Glossary 194
13.11 References 196

Chapter 14. Polyphenylene Oxide (Ether) and Other Polymeric Blends 197

14.1 Introduction 197
14.2 Blends 197
14.3 Blending Concepts 199
14.4 Properties of Commercial Polymer Blends 200
14.5 Modified PPO 200
14.6 Design of PPO Molded Parts 202
14.7 Properties of PPO-PS Blends 203
14.8 PPE 204

14.9 Applications of PPO Blends 204
14.10 Electrical Properties 204
14.11 PC-PBT (Xenoy) 204
14.12 PPO-Nylon Blends 205
14.13 Commercial Blends 206
14.14 Outlook for Blends 207
14.15 Glossary 207
14.16 References 210

Chapter 15. Fluorocarbon Polymers 213

15.1 Introduction 213
15.2 Structure of PTFE 214
15.3 Properties of PTFE 215
15.4 Frictional Behavior of Polyfluorocarbons 216
15.5 Abrasion Resistance of Polyfluorocarbons 216
15.6 PCTFE 216
15.7 PVDF 217
15.8 PVF 218
15.9 Fluorocarbon Copolymers 218
15.10 Applications of Polyfluorocarbons 220
15.11 Glossary 220
15.12 References 222

Chapter 16. Polyimides and Ester and Amide Copolymers 223

16.1 Introduction 223
16.2 Processing of PI 224
16.3 Properties of PIs 224
16.4 PAI 225
16.5 PEI 231
16.6 Applications of Imide Copolymers 231
16.7 Glossary 232
16.8 References 235

Chapter 17. Polyether Ketones, Polysulfones, and Polyphenylene Sulfide 237

17.1 Polyether Ketones 237
17.2 Applications of PEK and PEEK 238
17.3 Polysulfones 239
17.4 Applications of Polysulfones 241
17.5 Polyphenylene Sulfide 241
17.6 Applications of PPS 246
17.7 Glossary 247
17.8 References 248

Chapter 18. Liquid-Crystal Polymers 249

18.1 Introduction 249
18.2 Commercial Liquid-Crystal Polymers 250

18.3 Properties of LCPs 251
18.4 Theoretical Considerations of LCPs 255
18.5 Applications 256
18.6 Glossary 256
18.7 References 258

Chapter 19. Advanced Polymer Composites 259

19.1 Introduction 259
19.2 Fibrous Reinforcements 259
19.3 Pultrusion 260
19.4 Design Considerations 260
19.5 Rheology of Composites 263
19.6 Viscoelasticity 263
19.7 Effects of Temperature 266
19.8 Polymers for Engineering Applications 266
19.9 Unique Applications of Polymeric Composites 266
19.10 Future of Engineering Polymers 269
19.11 Glossary 269
19.12 References 272

Chapter 20. Design Considerations 273

20.1 Introduction 273
20.2 Viscoelasticity 273
20.3 Reinforced Polymers 274
20.4 Predictable Characteristics 274
20.5 Electrical Properties 275
20.6 Ease of Processing 276
20.7 Dimensional Changes in Processing 276
20.8 Principles of Design 276
20.9 Design Safety Factors 277
20.10 Health/Safety Factors 277
20.11 Future Outlook 277
20.12 Glossary 279
20.13 References 281

Appendix 283
