Contents

Foreword (Richard G. Baker and Harry J. Litsch) vii

Preface ix

Acknowledgments xii

PART ONE FUNDAMENTALS 1

Introduction: The What and Why of Metal Finishing 1

1. Background: The Place of Electrochemistry in Technology 5
2. Some Definitions and the Basics of Electrodeposition 8
3. Corrosion 27
4. Metallurgy 46

PART TWO ELECTROPLATING: PRINCIPLES AND PRACTICE 63

Section A Preparation for Finishing 65

5. Chemical Preparation for Finishing 67
6. Mechanical Preparation for Finishing 93
7. Rinsing and Water 99

Section B Fundamentals of Electroplating 113

8. Electrochemistry Applied to Electroplating 115
9. Electricity and the Electroplater 157

Section C The Plating Metals 167

10. Introduction to the Plating Metals 169
11. Sacrificial Coatings: Zinc and Cadmium 171

12. Decorative/Protective Coatings: Copper, Nickel, Chromium 188
13. The Engineering Metals 250
14. Minor Metals 333
15. Uncommon Metals 351
16. Alloy Plating 363

PART THREE RELATED PROCESSES 387

17. Autocatalytic ("Electroless") Plating 389
18. Immersion Plating 410
19. Plating on Nonconductors 416
20. Electroforming 426
21. Conversion Coatings 442
22. Anodizing Aluminum 452

PART FOUR SPECIAL TOPICS 479

23. Specifications and Tests 481
24. Control and Analysis 512
25. Waste Treatment and Metal Recovery 537
26. Control Charts, Sampling, and Quality Control 547

APPENDIXES 561

A-1 Electrochemical Equivalents of Elements of Plating Interest 563
A-2 Conversion Factors: U.S. Customary Units—SI 566
A-3 Glossary of Terms 569

Bibliography 577

Index 585
