

CONTENTS

Foreword to the Student

xv

BASIC PRINCIPLES, CONCEPTS AND DEFINITIONS 1

1

1.1 Introduction 1.2 The Working Substance 1.3 The System 1.4 Control Surface and Volume 1.5 Properties and State 1.6 Systems of Units 1.7 SI Units 1.8 Acceleration 1.9 Mass 1.10 Weight 1.11 Specific Volume and Density 1.12 Specific Weight 1.13 Pressure—Kinetic Theory 1.14 Fluid Pressure 1.15 Manometers 1.16 Archimedes Principle 1.17 Temperature—With a Microscopic View 1.18 Scales of Temperature 1.19 Measuring Temperature 1.20 Zeroth Law 1.21 Processes and Cycles 1.22 Conservation of Mass 1.23 Heat Reservoir 1.24 Heat Engines 1.25 Adiabatic Surface, Process 1.26 Closure.

ENERGY CONCEPTS 28

2.1 Introduction 2.2 Relation of Mass and Energy 2.3 Measuring Energy 2.4 Gravitational Potential Energy 2.5 Kinetic Energy 2.6 Internal Energy 2.7 Work 2.8 Work on a Moving Boundary of a System 2.9 Work Depends Upon the Path 2.10 Example—Work of a Nonflow Process 2.11 Elastic Work 2.12 Surface Tension 2.13 Electrical Work 2.14 Example 2.15 Generalized Work Equation 2.16 Flow Energy 2.17 Heat—A Microscopic Look 2.18 Constant Volume Specific Heat 2.19 Constant Pressure Specific Heat 2.20 Ratio of Specific Heats 2.21 Specific Heats for an Ideal Gas 2.22 Microscopic Aspects of Specific Heat 2.23 Accounting for the Variation of Specific Heats 2.24 Mean Specific Heats 2.25 Other Forms of Energy 2.26 Conservation of Energy 2.27 Perpetual Motion of the First Kind 2.28 Closure.

THE PURE SUBSTANCE 59

3.1 Introduction 3.2 The State Postulate 3.3 Phases 3.4 Changes of Phase at Constant Pressure 3.5 Comparison of Liquid and Vapor Curves 3.6 Thermodynamic Surfaces 3.7 Phase Diagrams 3.8 Phase Rule 3.9 Equations of State 3.10 Gas Tables 3.11 Liquid–Vapor Tables 3.12 Compressed Liquid 3.13 Example—Comparison of Enthalpy Changes of Water during Compression 3.14 Charts for Properties 3.15 The Mollier Diagram 3.16 The ph -Chart 3.17 Closure.

4 THE FIRST LAW, ENERGY 78

4.1 Introduction 4.2 First Law of Thermodynamics 4.3 Internal Energy—A Consequence of the First Law 4.4 Relation between E , U 4.5 Enthalpy 4.6 Closed Systems 4.7 Energy Equations for Closed Systems 4.8 Open Systems and Steady Flow 4.9 General Energy Equation for the Open System 4.10 Steady-State, Steady-Flow, Open Systems 4.11 Applications of the Steady-Flow Equation 4.12 Property Relations from Energy Equations 4.13 Unsteady State, Transient Flow, Open Systems 4.14 Matter Crossing More Than Two Boundaries 4.15 Boundaries of the System 4.16 Example—Air Compressor 4.17 Frictional Energy 4.18 Energy Equation for Flow of Incompressible Fluids 4.19 Incompressible Flow Through Fan or Pump 4.20 Closure.

5 THE SECOND LAW, ENTROPY 104

5.1 Introduction 5.2 Statements of the Second Law of Thermodynamics 5.3 Clausius Inequality 5.4 Entropy from the Second Law 5.5 Entropy Production 5.6 Example—Entropy Production Within a System 5.7 Availability, Closed System 5.8 Availability, Steady-Flow System 5.9 Reversibility 5.10 Irreversibility 5.11 Irreversibility of Closed System 5.12 Irreversibility of a Steady-Flow System 5.13 Available Portion of Heat 5.14 Example—Irreversibility of an Adiabatic Process 5.15 Example—Irreversibility of a Heat Exchange with Sink 5.16 Example—Irreversibility Because of a Heat Exchange 5.17 General Remarks about Entropy; Availability, and Irreversibility 5.18 Heat vs. Entropy for Irreversible Process 5.19 Entropy Change, Open System 5.20 Example—Mechanical Losses 5.21 Example—Irreversibility of Flow in Pipe 5.22 Example—Entropy Production for Transient Change 5.23 Second Law Analysis 5.24 Helmholtz and Gibbs Functions 5.25 Equilibrium 5.26 Quantitative Consideration of Equilibrium 5.27 Second Law and Probability 5.28 Perpetual Motion of the Second Kind 5.29 The Sink 5.30 Closure.

THE IDEAL GAS, 143

6.1 Introduction 6.2 Boyle's Law 6.3 Charles' Law 6.4 Avogadro's Law 6.5 The Equation of State 6.6 The Gas Constant 6.7 Joule's Law 6.8 Specific Heats of an Ideal Gas 6.9 Example 6.10 Dalton's Law of Partial Pressures 6.11 The Joule-Thomson Experiment 6.12 Third Law of Thermodynamics 6.13 Entropy of an Ideal Gas 6.14 Example—Irreversible Mixing of Gases 6.15 Gas Tables 6.16 Example—Gas Table Properties 6.17 Closure.

PROCESSES OF FLUIDS 162

7.1 Introduction 7.2 Isometric Process 7.3 Example—Isometric (Reversible) Process 7.4 Example—Irreversible Constant Volume 7.5 Isobaric Process 7.6 Example—Isobaric Process, Ideal Gas 7.7 Example—Isobaric Process, Vapor 7.8 Example—Irreversible Constant Pressure 7.9 Steady Flow with $\Delta K = 0$, $\Delta P = 0$, $W = 0$ 7.10 Example—Steady Flow, Steady State 7.11 Isothermal Process 7.12 Example—Isothermal Process, Air 7.13 Isentropic Process 7.14 Example—Isentropic

Process 7.15 Example—Isentropic Process with Variable Specific Heats 7.16 Adiabatic Processes, Reversible and Irreversible 7.17 Example—Reversible and Irreversible Adiabatics 7.18 Example—Irreversible Adiabatic 7.19 Throttling Calorimeter 7.20 Polytropic Process 7.21 Example—Polytropic Process, Solutions with Constant k and by Gas Table 7.22 Curves for Different Values of n 7.23 Stagnation Properties and Mach Number 7.24 Example—Stagnation Properties 7.25 Flow from a Rigid Tank 7.26 Example—Gas Flowing Out of a Tank 7.27 Entropy Change in a Control Volume, Pure Substance in Transient Process 7.28 Example—Entropy, Unsteady Flow 7.29 Example—Transient Flow 7.30 Example—Transient Flow 7.31 Some Efficiencies and Ratios 7.32 Closure.

GAS CYCLES 206

8.1 Introduction 8.2 Expansible Fluid in a Heat Engine 8.3 Cycle Work, Thermal Efficiency, and Heat Rate 8.4 The Carnot Cycle 8.5 Thermodynamic Temperature 8.6 Carnot Cycle with Ideal Gas 8.7 Cycle Work by $\int p dV$ or $-\int V dp$ 8.8 Mean Effective Pressure 8.9 Example—Carnot Cycle 8.10 Regeneration 8.11 Stirling Cycle 8.12 Ericsson Cycle 8.13 Reversed and Reversible Cycles 8.14 Reversed Carnot Cycle 8.15 Example—Cycle Analysis 8.16 Reversible Engine Most Efficient 8.17 Closure.

POWER FROM TWO-PHASE SYSTEMS 228

9.1 Introduction 9.2 Ideal Cycle, Ideal Engine 9.3 Rankine Cycle and Engine 9.4 Rankine Efficiencies—With Steam Rates 9.5 Example—Rankine Engine 9.6 Improving the Thermal Efficiency of Rankine Engine 9.7 Regeneration 9.8 Regenerative Cycle 9.9 The Regenerative Engine 9.10 Reheat 9.11 Reheat—Regenerative Cycle and Engine 9.12 Closed Feedwater Heaters 9.13 Binary Vapor Cycles 9.14 Incomplete-Expansion Engine and Cycle 9.15 Closure.

IMPERFECT GASES 255 10

10.1 Introduction 10.2 Equations of State 10.3 Van der Waals' Equation 10.4 Use of an Equation of State for Property and Energy Changes 10.5 Reduced Coordinates and Compressibility Factor 10.6 Generalized Compressibility Chart 10.7 Example—Volume Given 10.8 Generalized Equations of State 10.9 Example 10.10 Enthalpy Deviation 10.11 Entropy Deviation 10.12 Example—Isothermal Process 10.13 Example—Throttling Process 10.14 Example—Isentropic Process 10.15 Fugacity and the Generalized Fugacity Coefficient Chart 10.16 Example—Isothermal Process 10.17 Closure.

RELATIONS OF THERMODYNAMIC PROPERTIES 275 11

11.1 Introduction 11.2 Basic Mathematical Needs 11.3 Maxwell Relations 11.4 Example—Change of Entropy, $T = C$, by Equation of State 11.5 Clausius—Clapeyron Equation 11.6 Example—Clapeyron Equation 11.7 Coefficients of Expansions and

Compressibilities; Moduli 11.8 Example—Variation of Internal Energy with Pressure 11.9 Example—Isothermal Work and Heat for a Solid 11.10 Ideal-Gas Equation of State and the Coefficients 11.11 General Equations for Change of Entropy 11.12 Entropy Deviation 11.13 Entropy Deviation by Corresponding States 11.14 Example—Entropy of Compressed Water 11.15 Change of Entropy with Volume, $T = C$ 11.16 General Equation for Change of Internal Energy 11.17 General Equation for Enthalpy Change 11.18 Enthalpy Deviation 11.19 Joule-Thomson Coefficient 11.20 The Specific Heats 11.21 Example—Difference of Specific Heats for a Solid 11.22 The Energy Equations with Liquids or Solids 11.23 Specific Heats of Solids 11.24 The Primitive Surface of Gibbs 11.25 The Derived Surface of Gibbs 11.26 Thermodynamic Relations from the Gibbs Primitive Surface 11.27 Mixtures of Imperfect Gases 11.28 Elastic System 11.29 Paramagnetic System 11.30 Reversible Cell 11.31 Closure.

MIXTURES OF GASES AND VAPORS 316

12.1 Introduction 12.2 Description of Mixtures 12.3 Example 12.4 Properties of a Mixture 12.5 Mixtures of Gases with a Substance Undergoing Phase Change 12.6 Dew Point 12.7 Relative Humidity 12.8 Humidity Ratio 12.9 Adiabatic Saturation Process 12.10 Wet-Bulb Temperature 12.11 Psychrometric Chart 12.12 Enthalpy and Entropy of Superheated Vapor at Low Pressure 12.13 Example 12.14 Example—Properties of Atmospheric Air 12.15 Enthalpy, Internal Energy, and Wet Bulb Enthalpy of a Gas-Vapor Mixture 12.16 Example 12.17 Mixtures Other Than Air-Steam 12.18 Example—Fuel-Air Mixture 12.19 Example—Air Conditioning Process 12.20 Example—Constant Volume Process 12.21 Mixing Streams 12.22 Closure.

REACTIVE SYSTEMS 341

13.1 Introduction 13.2 Fuels 13.3 Analysis of Fuels 13.4 Composition of Air 13.5 Air-Fuel Ratios 13.6 Example—Combustion of Octane 13.7 Example—Volume of Products 13.8 Combustion in Excess and Deficient Air 13.9 Example—Dew Point of H_2O in Products 13.10 Example—Finding Air Required and Products from Combustion, Given the Gravimetric Analysis of Fuel 13.11 Analyzing the Products of Combustion 13.12 Example—Actual Air-Fuel Ratio 13.13 Example—Air for Hydrocarbon of Unknown Composition 13.14 Heats of Reactions 13.15 Enthalpy of Combustion 13.16 Some Remarks on Heating Values 13.17 Enthalpy Change During Reaction 13.18 Combustion Process, Random States 13.19 Sensible Enthalpy of Liquid Octane 13.20 Example—Temperature After Combustion, Ideal Diesel Engine 13.21 Example—Availability and Irreversibility for Combustion 13.22 Example—Fuel Cell Reaction 13.23 Constant Volume Combustion 13.24 Relation of Constant Pressure and Constant Volume Heating Values 13.25 Example 13.26 Example—Computing Heating Values at Constant Volume 13.27 Heating Value at Other Than Standard Temperature 13.28 Example—Enthalpy of Reaction at $0^\circ R$ Temperature 13.29 Enthalpy of Formation 13.30 Example—Temperature After Combustion, Diesel Engine 13.31 Enthalpy of Formation from Heating Value 13.32 Heating Value from Enthalpy of Formation 13.33 Gibbs Function of Formation 13.34 Reversible Reactions 13.35 Condition for Chemical Equilibrium, Ideal Gases 13.36 Example—Dissociation of CO_2 13.37 Example—Effect of Pressure on Dissociation of

CO₂ 13.38 Example—Dissociation of H₂O 13.39 van't Hoff Equilibrium Box 13.40 Equilibrium Constant 13.41 Example—Equilibrium Constant from ΔG_f 13.42 Example—Adiabatic Flame Temperature with Dissociation 13.43 Fugacity and Activity 13.44 Chemical Potential 13.45 Closure.

GAS COMPRESSORS 388

14.1 Introduction 14.2 Types of Compressors 14.3 Compressor Work 14.4 Preferred Compression Curves 14.5 Free Air 14.6 Volumetric Efficiency 14.7 Displacement Volume 14.8 Compressor Efficiency 14.9 Example—Air Compressor 14.10 Example—Final State and Entropy Change from Efficiency 14.11 Other Efficiencies 14.12 Multi-Stage Compression 14.13 Heat Transferred in Intercooler 14.14 Example—Two-Stage Compressor 14.15 Piston Speeds 14.16 Closure.

GAS TURBINES AND JET ENGINES 409

15.1 Introduction 15.2 Steady-Flow Brayton Cycle 15.3 Intermediate Temperature for Maximum Work 15.4 Gas Turbine with Fluid Friction 15.5 Example—Gas Turbine With and Without Friction, Air Standard 15.6 Energy Balance for Combustor 15.7 Example—Combustor 15.8 Ideal Cycle With Ideal Regenerative Heating 15.9 Effectiveness of Regenerator 15.10 Other Variations of the Brayton Cycle 15.11 Jet Propulsion 15.12 Work from Impulse-Momentum Principle 15.13 Maximum Power 15.14 Ram Effects 15.15 Example—Ram Effects 15.16 Performance Parameters for Jet Engines 15.17 Ramjets 15.18 Rockets 15.19 Closure.

INTERNAL COMBUSTION ENGINES 442

16.1 Introduction 16.2 The Otto Cycle 16.3 Ideal Standards of Comparison 16.4 Example—Air-Standard Otto Cycle 16.5 Energy Considerations of the Open Otto Cycle 16.6 Example—Computing the Size of Engine 16.7 Diesel Cycle 16.8 The Ideal Open-Cycle Diesel 16.9 Example—Diesel Cycle 16.10 Second Law Analysis 16.11 Dual Combustion Cycle 16.12 Variations in Actual Engines 16.13 Closure.

REVERSED CYCLES 460

17.1 Introduction 17.2 The Reversed Carnot Cycle 17.3 Conclusions from the Carnot Cycle 17.4 Unit for Refrigerating Effect 17.5 Example—Carnot Refrigerator 17.6 Vapor Compression Refrigeration 17.7 Displacement of the Compressor 17.8 Example 17.9 Refrigerants 17.10 Vacuum Refrigeration 17.11 Example—Vacuum Refrigeration 17.12 Absorption Systems of Refrigeration 17.13 Gas Refrigerating Cycle 17.14 Variations of Basic Refrigeration Cycles 17.15 Cryogenics 17.16 The Linde Liquefier 17.17 Claude Liquefier 17.18 Minimum Work for Liquefying Gases 17.19 Stage Compression 17.20 Separation of Binary Mixtures 17.21 Closure

18 NOZZLES, DIFFUSERS, AND FLOWMETERS 490

18.1 Introduction 18.2 Some Basic Principles 18.3 Acoustic Speed 18.4 Example—Acoustic Speed 18.5 Isentropic Flow with Varying Area 18.6 Mass Rate of Flow Through a Nozzle; 18.7 Critical Pressure Ratio 18.8 Correction for Initial Velocity 18.9 Efficiency and Coefficients for Nozzle 18.10 Example—Elementary Design Calculations and Variation of Velocity, Specific Volume, and Area of Section, Ideal Gas 18.11 Example—Equilibrium Flow in Steam Nozzle 18.12 Supersaturated Flow 18.13 Example—Supersaturated Flow 18.14 Flow from Nozzles with Varying Pressure Ratios 18.15 Diffuser 18.16 Example—Diffuser 18.17 Approximate Equations for a Small Pressure Change 18.18 The Venturi 18.19 Example—Venturi 18.20 Flow Nozzle: Orifice and Pitot Tube 18.21 Closure.

19 HEAT TRANSFER 516

19.1 Introduction 19.2 Conduction 19.3 Fourier's Law 19.4 Example—Heat Flux 19.5 Variation of Thermal Conductivity 19.6 Conduction Through a Plane Wall 19.7 Film Coefficient 19.8 Heat Transfer from Fluid to Fluid 19.9 Example—Composite Plane Wall Heat Transfer 19.10 Conduction Through Curved Wall 19.11 Example 19.12 Logarithmic Mean Temperature Difference 19.13 Example—Logarithmic Mean Temperature Difference 19.14 Thermal Radiation 19.15 Stefan-Boltzmann Law 19.16 Some Basic Definitions 19.17 Configuration Factor 19.18 Radiation Between Gray Bodies 19.19 Example—Two Gray Surfaces in Space 19.20 Example—Radiation from Steam Line 19.21 Radiation of Gases 19.22 Review of Units 19.23 Viscosity 19.24 Kinematic Viscosity 19.25 Dimensional Analysis and Dimensionless Numbers 19.26 Flow of Fluids 19.27 Convected Heat 19.28 Film Coefficient 19.29 Film Coefficient, Turbulent Flow Inside Pipes 19.30 Example—Air Preheater 19.31 Example—Film Coefficient for Steam 19.32 Film Coefficient, Laminar Flow of Liquids in Pipes 19.33 Example—Oil Heater 19.34 Film Coefficients for Annular Space 19.35 Flow-Over Outside of a Single Pipe, Forced Convection 19.36 Film Coefficients with Free Convection 19.37 Example—Heat Loss from Pipe 19.38 Condensing Vapors 19.39 Closure.
