
CONTENTS

	Preface	xv
Chapter 1	Basic Concepts and Definitions	1
1-1	The Nature of Thermodynamics	1
1-2	Energy Sources and Conversion Efficiencies	2
1-3	Introduction to the Laws of Thermodynamics	6
1-4	Thermodynamic System, Property, and State	8
1-5	Dimensions and Units	12
1-6	Density, Specific Weight, Specific Volume, and Pressure	18
1-7	Temperature and the Zeroth Law	22
1-8	Constant-Volume Gas Thermometer	24
	References	28
	Problems (Metric)	28
	Problems (USCS)	31
Chapter 2	The First Law of Thermodynamics and the State Postulate	35
2-1	Introduction	35
2-2	The Concept of Work and the Adiabatic Process	35
2-3	Work as Related to Mechanical and Electrostatic Forms of Energy	37
2-4	The First Law of Thermodynamics	39
2-5	The Nature of E , the Total Energy	40
2-6	A Conservation of Energy Principle for Closed Systems	42
2-7	Quasistatic Processes	45
2-8	Quasistatic Expansion and Compression Work	46
2-9	Other Quasistatic Forms of Work	52
2-10	Generalized Quasistatic Work Interactions	55
2-11	Nonquasistatic Forms of Work	56
2-12	The State Postulate	58

2-13	Simple Systems	60
2-14	The Conservation of Energy Principle for Simple, Compressible Closed Systems	61
	References	63
	Problems (Metric)	63
	Problems (USCS)	68
Chapter 3	Ideal Gas and Specific Heat	74
3-1	Introduction	74
3-2	Ideal-Gas Equation of State	74
3-3	Specific Heats c_v and c_p	79
3-4	Internal Energy, Enthalpy, and Specific-Heat Relations for Ideal Gases	80
3-5	Specific Heats Variation with Temperature	82
3-6	Problem-Solving Techniques	85
3-7	Energy Analysis of Closed Ideal-Gas Systems	86
	References	96
	Problems (Metric)	96
	Problems (USCS)	101
Chapter 4	Properties of a Pure, Simple Compressible Substance	106
4-1	The PvT Surface	106
4-2	The Pressure-Temperature Diagram	109
4-3	The Pressure-Volume Diagram	112
4-4	Tables of Properties of Pure Substances	114
4-5	Tabular Data and Closed-System Energy Analysis	127
4-6	The Compressibility Factor and Corresponding States	137
4-7	Property Relations for Incompressible Substances	142
	References	146
	Problems (Metric)	146
	Problems (USCS)	153
Chapter 5	Control-Volume Energy Analysis	159
5-1	Idealizations for Steady-State Control-Volume Analysis	159
5-2	Conservation of Mass Principle for a Control Volume in Steady State	161
5-3	Conservation of Energy Principle for a Control Volume in Steady State	165
5-4	Special Conservation Equations	167
5-5	Engineering Applications Involving Steady-State Systems	168
	Problems (Metric)	185
	Problems (USCS)	189
Chapter 6	A Macroscopic Viewpoint of the Second Law	195
6-1	Introduction	195
6-2	Equilibrium and the Second Law	197
6-3	Heat Engines	199

6-4	Perpetual-Motion Machines	202
6-5	Reversible and Irreversible Processes	203
6-6	Heat and Work Reservoirs	207
6-7	Thermal Efficiency of Reversible and Irreversible Engines	208
6-8	The Thermodynamic Temperature Scale	210
6-9	The Carnot Efficiency	212
6-10	The Clausius Inequality	213
6-11	Entropy	215
6-12	Increase in Entropy Principle	218
6-13	The Entropy Change of Heat and Work Reservoirs	221
6-14	The Carnot Heat Engine	222
6-15	The Carnot Refrigerator and Heat Pump	224
6-16	Effects of Reversible and Irreversible Heat Interactions	230
	References	232
	Problems (Metric)	233
	Problems (USCS)	236
Chapter 7	Some Consequences of the Second Law	241
7-1	The Temperature-Entropy Diagram	241
7-2	The Enthalpy-Entropy Diagram	244
7-3	The $T ds$ Equations	245
7-4	Entropy Changes Involving Real Gases and Saturation States	247
7-5	Entropy Changes of Ideal Gases	254
7-6	Entropy Change of an Incompressible Substance	264
7-7	Some Second-Law Relationships for a Closed System	267
7-8	Some Second-Law Relationships for a Control Volume	269
7-9	Isentropic Processes	273
7-10	Efficiencies of Some Steady-Flow Devices	286
7-11	Irreversible Steady-Flow Processes Involving Incompressible Fluids	289
	References	295
	Problems (Metric)	297
	Problems (USCS)	303
Chapter 8	Concept of Availability	312
8-1	Introduction	312
8-2	Closed-System Availability	313
8-3	Availability in Steady-Flow Processes	319
8-4	Effect of Heat Reservoirs on Availability Studies	325
8-5	Irreversibility for Closed and Open Systems	327
8-6	Effectiveness of Processes and Cycles	330
	Problems (Metric)	331
	Problems (USCS)	334
Chapter 9	A Statistical Viewpoint of Entropy and the Second Law	337
9-1	Quantization of Energy	337
9-2	The Entropy Function	339
9-3	The Second Law of Thermodynamics	345

9-4	Reversible and Irreversible Processes	351
9-5	Microscopic Implications of Work and Heat	351
9-6	Entropy and the Most Probable Macrostate	353
9-7	Entropy Changes in Terms of Macroscopic Variables	356
9-8	Heat and Work Reservoirs	361
9-9	Application of the Second Law to Closed Systems	361
9-10	Heat Engine Concepts	364
	References	369
	Problems	369
Chapter 10	Transient Flow Analysis	373
10-1	Introduction	373
10-2	General Conservation of Energy Principle for a Control Volume	374
10-3	Charging and Discharging Rigid Vessels	378
10-4	Transient System Analysis with Boundary Work	385
	Problems (Metric)	388
	Problems (USCS)	390
Chapter 11	Nonreactive Ideal-Gas Mixtures	392
11-1	Introduction	392
11-2	Mass Analysis of Gas Mixtures	392
11-3	PvT Relationships for Mixtures of Ideal Gases	394
11-4	Properties of Mixtures of Ideal Gases	398
11-5	Mixing Processes Involving Ideal Gases	404
11-6	Properties of a Mixture of an Ideal Gas and a Vapor	409
11-7	The Adiabatic-Saturation and Wet-Bulb Temperatures	414
11-8	The Psychrometric Chart	418
11-9	Air-Conditioning Process	420
	Problems (Metric)	439
	Problems (USCS)	445
Chapter 12	PvT Behavior of Real Gases and Real-Gas Mixtures	453
12-1	The Virial Equation of State	453
12-2	The van der Waals Equation of State	455
12-3	Other Equations of State	457
12-4	Generalized Compressibility Charts	461
12-5	Real-Gas Mixtures	461
	References	466
	Problems (Metric)	466
	Problems (USCS)	468
Chapter 13	Generalized Thermodynamic Relationships	471
13-1	Fundamentals of Partial Derivatives	472
13-2	Some Fundamental Relations for Simple, Compressible Systems	474

13-3	Generalized Relations for Changes in Entropy, Internal Energy, and Enthalpy for Simple, Compressible Substances	475
13-4	Generalized Relations for c_p and c_v	480
13-5	Vapor Pressure and the Clapeyron Equation	484
13-6	The Joule-Thomson Coefficient	488
13-7	Generalized Thermodynamic Charts	492
	References	498
	Problems (Metric)	498
	Problems (USCS)	502
Chapter 14	Combustion and Thermochemistry	507
14-1	Stoichiometry of Reactions	507
14-2	Actual Combustion Processes	514
14-3	Steady-Flow Energy Analysis of Reacting Mixtures	517
14-4	Adiabatic-Combustion Temperature	523
14-5	Thermochemical Analysis of Constant-Volume Systems	528
14-6	Enthalpy of Reaction and Heating Values	534
14-7	Entropy Changes for Reacting Mixtures	538
14-8	Availability Analysis of Reacting Systems	545
	Problems (Metric)	554
	Problems (USCS)	559
Chapter 15	Chemical Equilibrium	564
15-1	Introduction	564
15-2	Equilibrium Criteria	565
15-3	Equilibrium and the Chemical Potential	567
15-4	The Chemical Potential of an Ideal Gas	570
15-5	The Equilibrium Constant K_p	571
15-6	Calculation of K_p Values	573
15-7	Calculation of Equilibrium Compositions	574
15-8	Ionization Reactions	578
15-9	First-Law Analysis of Reacting Ideal-Gas Mixtures	579
15-10	Simultaneous Reactions	583
15-11	A Relationship between K_p and the Enthalpy of Reaction	586
	Problems	587
Chapter 16	Gas Power Cycles	592
16-1	The Air-Standard Cycle	592
16-2	The Air-Standard Carnot Cycle	593
16-3	Some Introductory Nomenclature for Reciprocating Devices	596
16-4	The Air-Standard Otto Cycle	597
16-5	The Air-Standard Diesel Cycle and the Dual Cycle	603
16-6	The Air-Standard Brayton Cycle	609
16-7	The Adiabatic Efficiency of Work Devices	615
16-8	The Regenerative Gas-Turbine Cycle	620
16-9	The Polytropic Process	625
16-10	Steady-Flow Analysis of Compressors	627
16-11	Gas-Turbine Cycles with Intercooling and Reheating	631

Table A-30M Properties of Saturated Nitrogen (N_2): Temperature and Pressure Tables	824
Table A-31M Properties of Nitrogen (N_2): Superheated Vapor Table	825

Appendix A-4 Supplementary Tables and Figures (USCS Units)	826
Table A-1 Physical Constants and Conversion Factors	826
Table A-2 Values of the Molar Mass (Molecular Weight) of Some Common Elements and Compounds	828
Table A-3 Critical Properties and van der Waals Constants	829
Table A-4 Ideal-Gas Specific-Heat Data for Various Gases, Btu/(lb)($^{\circ}$ F)	830
Table A-5 Ideal-Gas Properties of Air	832
Table A-6 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Diatomic Nitrogen, N_2	834
Table A-7 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Diatomic Oxygen, O_2	836
Table A-8 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Carbon Monoxide, CO	838
Table A-9 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Carbon Dioxide, CO_2	840
Table A-10 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Water, H_2O	842
Table A-11 Ideal-Gas Enthalpy, Internal Energy, and Absolute Entropy of Diatomic Hydrogen, H_2	844
Table A-12 Properties of Saturated Water: Temperature Table	845
Table A-13 Properties of Saturated Water: Pressure Table	847
Table A-14 Properties of Water: Superheated-Vapor Table	850
Table A-15 Properties of Water: Compressed Liquid Table	856
Table A-16 Properties of Saturated Refrigerant 12, (CCl_2F_2): Temperature Table	857
Table A-17 Properties of Saturated Refrigerant 12, (CCl_2F_2): Pressure Table	858
Table A-18 Properties of Superheated Refrigerant 12 (CCl_2F_2)	859
Table A-19 Specific Heats of Some Common Liquids and Solids	862
Figure A-20 General Electric Psychrometric Chart, Barometric Pressure 14.696 psia	863
Table A-21 Constants for the Benedict-Webb-Rubin and Redlich-Kwong Equations of State	864
Table A-22 Values of the Enthalpy of Formation, Gibbs Function of Formation, Absolute Entropy, and Enthalpy of Vaporization at 77 $^{\circ}$ F and 1 atm	865
Table A-23 Thermodynamic Properties of Potassium	866
Figure A-24 Temperature-Entropy Diagram for Carbon Dioxide (CO_2)	867
Figure A-25 Mollier Diagram for Steam	868

Table A-26 Properties of Saturated Nitrogen (N_2): Temperature Table	869
Table A-27 Properties of Nitrogen (N_2): Superheated-Vapor Table	870
Symbols	871
Selected Problem Answers (Metric)	874
Selected Problem Answers (USCS)	881
