PREFACE TO THE THIRD EDITION . . . . .	v
PREFACE TO THE FIRST EDITION . . . . .	vii
CHAPTER I	
FUNDAMENTAL UNITS AND OHM'S LAW . . . . .	1
Importance and nature of electricity—Static and dynamic electricity—Kinds of currents—Production of the current—Conductors and insulators—The electric circuit—Common electrical symbols—Series and parallel connections illustrated—Cause and regulation of hydraulic flow—Hydraulic units—Cause and regulation of electrical flow—Fundamental electrical units—Use of the voltmeter and ammeter—Ohm's law—Ammeter-voltmeter measurement of resistance.	
CHAPTER II	
SERIES AND PARALLEL CIRCUITS . . . . .	24
Further discussion of Ohm's law—Study of a series circuit—Study of a parallel circuit—Conductance.	
CHAPTER III	
FURTHER STUDY OF CIRCUITS . . . . .	35
Combination circuits—Fall in hydraulic pressure—Fall in electrical pressure—Line drop—Method of solving problems involving line drop.	
CHAPTER IV	
ELECTRIC POWER—HEATING EFFECTS . . . . .	44
Force and units of force—Units and measurement of work—Energy defined and illustrated—Kinds of energy—Why a body possesses energy—Transformation and conservation of energy—Power defined—Units of power—The fundamental power equation—Other power equations—Measurement of power by the ammeter-voltmeter method—The indicating wattmeter—The horsepower-hour—The watt-hour—The kilowatt-hour—Line loss—Heating effects of a current—The calorie—The British thermal unit—Amount of the heat developed in a conductor—Applications of heating effects.	

## CHAPTER V

## RESISTANCE OF WIRES . . . . . 62

Wires commonly used—Factors affecting the resistance of wires—Effect of length on resistance—Effect of diameter on resistance—The mil—The circular mil—Specific resistance—General formula for resistance—American-wire-gage table—Determination of copper resistances without reference to the working table—Voltage drop along a wire—Stranded wire—Carrying capacity of wires—Effect of temperature on resistance—Temperature coefficient of resistance.

## CHAPTER VI

## METHODS OF MEASURING RESISTANCE . . . . . 82

Ammeter-voltmeter method—Fall-of-potential method—Voltmeter method—Wheatstone-bridge method (diamond and slide-wire form)—Portable testing sets.

## CHAPTER VII

## TRANSMISSION AND DISTRIBUTION OF THE CURRENT . . . . . 93

Line loss—Modern transmission lines—Effect of voltage of transmission on line loss—Balanced and unbalanced two-wire systems—Balanced and unbalanced three-wire systems—Broken neutrals.

## CHAPTER VIII

## CHEMICAL EFFECTS OF THE CURRENT. . . . . 104

Liquids as conductors—Electrolysis of water—Electroplating—Industrial importance of electrolysis—Destruction of water and gas mains—The international ampere—Voltameters—Polarity indicators.

## CHAPTER IX

## PRIMARY BATTERIES . . . . . 110

Battery cells—Simple primary cells—Action of a simple primary cell—Local action—Polarization—Electromotive force of a cell—Cell resistance—Current delivered by a cell—Terminal voltage—Series arrangement of cells—Parallel arrangement of cells—Combination arrangement of cells—Best arrangement of cells—The Daniell cell—The gravity cell—The Le Clanché cell—The dry cell—The Weston standard cell.

## CHAPTER X

## STORAGE BATTERIES . . . . . 127

Secondary battery cells—The simple lead storage cell and its chemical action—Commercial storage cells—Chemical action of commercial storage cells—Planté or formed plates—Faure or

pasted plates—Stationary batteries—Vehicle batteries—Battery rating—Efficiency and characteristics of storage cells—Charging and care of storage batteries—Construction and chemical action of the Edison cell—Voltage control.

CHAPTER XI

**MAGNETS AND MAGNETISM** . . . . . 142

Importance of magnetism—Magnetic substances—Natural and artificial magnets—Field about a bar magnet—Consequent poles—Properties of lines of force—Magnetic attraction and repulsion—Effect of distance on magnetic attraction and repulsion—Theory of magnetism—Effect of breaking a magnet—Forms of magnets—Magnetizing and aging—Induced magnetism—Magnetic screens—The magnetic compass—The earth as a magnet—The dipping needle—The magnetic circuit.

CHAPTER XII

**MAGNETIC EFFECTS OF THE CURRENT** . . . . . 155

Electromagnetism—Proof that a live conductor is surrounded by a magnetic field—Magnetic field around a straight wire—Right-hand rule for direction of magnetic lines around a wire—Action of parallel conductors—Lines of force around a single turn of wire—The helix or solenoid—The helix rule—Commercial solenoids—The electromagnet—The lifting magnet—Dynamo magnets—The electric bell—The reverse-current cut-out—The telegraph.

CHAPTER XIII

**INDUCED ELECTROMOTIVE FORCE** . . . . . 168

Faraday's discovery—Direction of the induced e.m.f. (Fleming's right-hand rule)—Lenz's law of induced currents—Factors affecting the amount of induced e.m.f.—Value of the induced e.m.f.—Eddy currents—Mutual induction—Self induction—Low-tension ignition—High-tension ignition—Action of an automobile ignition system—The Ruhmkorff coil—Principle of the transformer—Commercial transformers—Bell's original telephone line—The modern telephone line—Modern transmitters and receivers.

CHAPTER XIV

**DIRECT-CURRENT GENERATORS** . . . . . 189

Function and general construction of the direct-current generator—General construction of the alternating-current generator—Action of a simple loop generator—Sine curve of induced e.m.f. for a simple loop generator—Collecting rings—The commutator—Sine curve of a simple loop generator with

commutator—The drum-wound armature—The ring-wound armature—Single-coil double-pole generator—Double-coil double-pole generator—Four-coil double-pole generator—Eight-coil double pole generator—Armature mathematics—Cross-magnetization—Position of brushes—Commutating poles and their effect—Classification of generators—Separately excited generators—Voltage control—External characteristic—Voltage regulation—Series generators—Shunt generators—Compound generators—Dynamo construction.

## CHAPTER XV

## DIRECT-CURRENT MOTORS. . . . . 214

Function of the motor—Principle of the direct-current motor—Fleming's left-hand rule—Force exerted on a conductor—Motor torque explained—Measurement of torque—Effect of field strength and armature current on torque—Motor effect of a generator—Counter e.m.f.—Motor speed—Speed regulation—Position of brushes—Commutating poles—The series motor—Speed control—Trolley-car speed control—The shunt motor—The compound motor—Purpose and construction of motor starters.

## CHAPTER XVI

## DYNAMO LOSSES AND EFFICIENCY . . . . . 235

General discussion of dynamo losses—Copper losses—Iron losses—Mechanical losses—Stray power—Efficiency.

## CHAPTER XVII

## ELECTRICAL MEASURING INSTRUMENTS . . . . . 240

General principle of measuring instruments—The D'Arsonval galvanometer—The millivoltmeter—The ammeter—The voltmeter—The indicating wattmeter—The watt-hour meter.

## CHAPTER XVIII

## ALTERNATING CURRENTS . . . . . 250

Advantages of alternating current—Prime movers—Transmission and distribution—Hydraulic analogy of a direct current—Hydraulic analogy of an alternating current—Comparison of direct-current circuits and alternating-current circuits—Experiment to show effect of inductance—Experiment to show effect of capacity—Instantaneous values—Sine curve of alternating e.m.f.—Important terms—Vector diagrams—Equations for instantaneous values of voltage and current—Average values of voltage and current—Effective values of voltage and current—Phase relations—Resonance—Ohm's law applied to alternating-current circuits—Inductive reactance—Capacity reactance

—Reactance—Impedance—General law of alternating-current circuits—True and apparent power—Power factor—Rating of alternators and transformers.

## CHAPTER XIX

STATIC ELECTRICITY . . . . . 273

Electrified bodies—Magnetized bodies—Electrification by rubbing—Positive and negative electricity—Electrification explained—General description of the atom—Detecting the charge—Measurement of the charge—The law of attraction and repulsion—Temporary charging by induction—Permanent charging by induction—The electrophorus—Static machines—Construction and operation of the electroscope—The Leyden jar—Commercial condensers—Distribution of the charge—Lightning—Lightning rods.

## CHAPTER XX

ELECTRIC LIGHTING . . . . . 285

The carbon lamp—The tungsten vacuum lamp—The tungsten gas-filled lamp—The carbon-arc light—The mercury-vapor lamp—The sodium-vapor lamp—The neon lamp—The fluorescent lamp.

## CHAPTER XXI

RECTIFICATION OF THE CURRENT. . . . . 292

Effect of heat on electrons—The Edison effect—The tungar rectifier—The copper oxide rectifier—The motor-generator set.

APPENDIX. . . . . 297

Useful information—English and metric equivalents—Units frequently used—Density of common substances—Specific gravity of common substances—Melting points—Boiling points—Trigonometric functions—Decimal equivalents.

INDEX . . . . . 301
