PREFACE	xiii
Infrared Spectroscopy of Transient Surface Species	
<i>C. Lamberti, E. Groppo, G. Spoto, S. Bordiga and A. Zecchina</i>	
I. Introduction	2
A. Dynamic Aspects in Adsorption and Surface Transformations	4
B. Dynamic Aspects of Oligomerization Reactions Catalyzed by Brønsted Acid Sites	6
C. Dynamic Aspects of Unsaturated Hydrocarbons Oligomerization and Polymerization on Metal-Containing Catalyst	8
II. NO Decomposition in Cu-Exchanged Zeolites	10
A. Preparation of Cu ⁺ -Exchanged Zeolites Exhibiting a Model Compound Character	10
B. Formation of Intrazeolitic Cuprous Complexes of Well-Defined Stoichiometry	10
1. Cu ⁺ · N ₂ Complexes	11
2. Cu ⁺ · (CO) _n Complexes (<i>n</i> = 1, 2, and 3)	11
3. Cu ⁺ · (NO) _n Complexes (<i>n</i> = 1 and 2)	13
C. Reactivity of Intrazeolitic Cuprous Sites Toward NO as Investigated by Temperature-Resolved IR Spectroscopy	16
III. H ₂ Splitting on High-Surface-Area MgO	18
A. Overview of Room Temperature Experiments	19
B. Time-Dependent IR Spectroscopy of Hydrogen Adsorbed at 20 K on High-Surface-Area MgO	20
C. Pressure-Dependent IR Spectroscopy of Hydrogen Adsorbed at 20 K on MgO Microcrystals of Various Surface Areas	21
D. Temperature-Dependent IR Spectroscopy of Hydrogen Adsorbed on High-Surface-Area MgO	23
1. Site-Specific Adsorption Energy for Molecularly Adsorbed Hydrogen Adducts	23
2. Concluding Remarks and Assignment of Hydroxyl and Hydride Species	23
IV. Reactions Catalyzed by Brønsted Acid Sites: The MTO Process and Oligomerization of Unsaturated Hydrocarbons	25
A. The MTO Process	25
1. Mechanism of Methanol-to-Hydrocarbon Catalysis	25
2. Carbocationic Methyl-Substituted Benzenes in Zeolites	26
B. Oligomerization of Acetylenic and Olefinic Hydrocarbons in Zeolite Cavities	29
1. Acetylenic Molecules Formed in HZSM-5 at Room Temperature	29
2. Olefinic Hydrocarbons Formed in Various Protonic Zeolites	33
V. Oligomerization Reactions Catalyzed by Surface Basic Centers: The MgO/CO Case Study	41
A. CO Oligomerization on MgO: <i>Ab initio</i> Calculation for Simple Cluster Models	43
B. CO Oligomerization on MgO: Time- and Pressure-Dependent IR Spectroscopy at 60 K	45
1. Microcrystal Surface Area: A Means for Tuning Surface Reactivity	45
2. CO Oligomerization on High-Surface-Area MgO	47

VI. Polymerization Reactions Catalyzed by Transition Metal Centers: The Cr/SiO ₂ Case Study	49
A. The Cr/SiO ₂ Phillips Catalyst for Ethene Polymerization: Structure of the Active Sites	49
1. Preparation of the Cr/SiO ₂ Phillips Catalyst	49
2. The Structure of the Reduced Cr(II) Species	51
B. The Ethene Polymerization Mechanism	52
1. Comparison with Other Alkene Polymerization Catalysts: The Mystery of the Polymerization Mechanism in the Phillips Catalyst	52
2. The Mechanisms Proposed in the Literature and the "Zoo" of Precursor Species	53
C. The Ethene Initiation Mechanism as Investigated by FTIR Spectroscopy	56
1. Ethene Polymerization at Room Temperature: Observation of the Growing Polymeric Products.	56
2. Recent Improvements in the Detection of the Precursor/Intermediate Species.	60
3. Outlook	65
VII. Conclusions	67
References	67

The Application of UV Raman Spectroscopy for the Characterization of Catalysts and Catalytic Reactions

P. C. Stair

I. Introduction	75
II. UV Resonance Raman Spectroscopy	77
III. Avoidance of Fluorescence	78
IV. Instrumentation for UV Raman Characterization of Working Catalysts: The Fluidized-Bed Reactor.	81
V. Characterization of Catalysts	85
A. Highly Dispersed Supported Vanadium Oxide: The Influence of Resonance Enhancement.	85
B. Formation and Reaction of Peroxide and Superoxide in Fe ₂ /MFI	87
VI. Characterization of Adsorbates and Reactions.	91
A. Resonance Raman Spectroscopy of Adsorbed Benzene	91
B. Characterization of Coke Formation and Topology	93
VII. Conclusions and Perspective.	95
Acknowledgments	96
References	96

Inelastic Incoherent Neutron Scattering in Catalysis Research

Peter W. Albers and Stewart F. Parker

I. Introduction	100
II. Technical and Experimental Aspects of the IINS Technique	101
III. Examples	105
A. Detection of Adsorbed Species and Intermediates on Catalyst Surfaces.	105
1. Dihydrogen Adsorption.	105
2. Thiophene Adsorption	107

3. Ammonia Adsorption	109
4. Synthesis of Amines	109
5. Synthesis of Methyl Chloride.	109
6. Epoxidation of Propene.	111
7. Non-oxidative Coupling of Methane.	111
B. Catalyst Poisoning In-Process Over Time	112
C. Preferential Adsorption: Identification of Strongly Adsorbed Molecular Species on Pd/C Catalysts in a Process with Liquid-Phase Reactants (Heck Reaction)	117
D. Catalyst Coking.	118
E. Fuel Cell Catalysis: Site Occupation by Atomic Hydrogen-Titration of Surface Sites on Supported Nanoparticles of Various Sizes-Detection of Hydrogen Spillover	120
F. Hydrogenation/Hydrogasification	123
G. Zeolites	125
IV. The Future of the IINS Technique	127
References	129

Sum Frequency Generation and Polarization-Modulation Infrared Reflection Absorption Spectroscopy of Functioning Model Catalysts from Ultrahigh Vacuum to Ambient Pressure

Günther Rupprechter

I. Introduction	134
II. Model Catalysts for Investigations of Elementary Steps of Catalytic Reactions.	140
III. High-Pressure Surface-Sensitive Techniques	142
A. Vibrational Sum Frequency Generation Spectroscopy	144
1. Basics	144
2. IR Gas-Phase Absorption Correction, Sensitivity toward Various Adsorbed Species, and SFG Lineshape	146
3. Design of an SFG Spectrometer	148
4. SFG-compatible UHV-High-pressure Reaction Cells	149
B. Polarization-Modulation IR Reflection Absorption Spectroscopy	152
1. Basics	152
2. High-pressure Reaction Cells for PM-IRAS and Experimental Design	153
C. High-Pressure X-Ray Photoelectron Spectroscopy	155
1. Introductory Remarks.	155
2. High-pressure Reaction Cells for XPS	155
D. High-Pressure Scanning Tunneling Microscopy	156
E. Environmental Transmission Electron Microscopy	157
IV. Spectroscopy of Model Catalysts at Pressures Exceeding Ultrahigh Vacuum	158
A. CO Adsorption at Pressures from Ultrahigh Vacuum to 1000 mbar: Introductory Remarks	159
B. Gas Purity-Precautions for Experiments at Pressures Exceeding UHV	160
C. CO Adsorption and CO-H ₂ Interactions on Pd(111) and Pd/Al ₂ O ₃	162
1. CO Adsorption on Pd(111) and on "Defect-rich" Pd(111)	163
2. CO Adsorption on Al ₂ O ₃ -supported Palladium Nanoparticles	171
3. CO Dissociation on Palladium Surfaces	185
4. Hydrogen Adsorption, Absorption, and Palladium Hydride Formation on Pd ₃ Al ₂ O ₃ and on Pd(111)	188

5. CO/H Interactions on Pd(111) and Pd/Al ₂ O ₃ under UHV	190
6. CO Hydrogenation on Pd(111) and Pd/Al ₂ O ₃ at Atmospheric Pressure	198
D. CO Adsorption, Dissociation, and Oxidation on Pt(111) and Platinum Nanoparticles Supported on SiO ₂	202
1. CO Adsorption on Pt(111)	202
2. CO Adsorption on Platinum Nanoparticles Supported by SiO ₂	206
3. CO Dissociation and CO Oxidation on Pt(111)	210
E. CO Adsorption, Dissociation, and Oxidation on Rh(111)	210
1. CO Adsorption and Dissociation on Rh(111)	210
2. CO Oxidation on Rh(111)	215
F. CO Adsorption on Gold, Nickel, Iridium, Iron, and Ruthenium Single Crystals	216
G. Broadband SFG Spectroscopy and Pump-probe Experiments	218
H. Monitoring Molecular Orientation by Polarization-Dependent SFG	218
I. Ethene Adsorption, C ₂ H ₄ -Hydrogen Coadsorption, and C ₂ H ₄ Hydrogenation on Pd(111) and Pd/Al ₂ O ₃	219
1. Ethene Adsorption and C ₂ H ₄ -Hydrogen Coadsorption on Pd(111) under UHV	219
2. Ethene Adsorption and C ₂ H ₄ Hydrogen Coadsorption on Pd/Al ₂ O ₃ under UHV	222
3. Ethene Hydrogenation on Pd(111) and Pd/Al ₂ O ₃ at Atmospheric Pressure	225
J. Ethene Adsorption and Hydrogenation on Pt(111); Effect of Coadsorbed CO	228
1. C ₂ H ₄ Adsorption and Hydrogenation on Pt(111) under UHV and at mbar Pressure	228
2. C ₂ H ₄ /CO Coadsorption and Hydrogenation on Pt(111) at Pressures Ranging from UHV to 500 mbar	230
K. Methanol Decomposition and Oxidation on Pd(111) and Pd/Al ₂ O ₃	232
1. Methanol Decomposition on Pd(111) under UHV and at Elevated Pressures	232
2. Methanol Decomposition on Pd/Al ₂ O ₃ under UHV and at Elevated Pressures	237
3. Methanol Oxidation on Pd(111) and on Pd/Al ₂ O ₃ at mbar Pressures	239
V. Outlook and Directions of Future Research	244
VI. Conclusions and Perspective	248
Acknowledgments	249
References	250

Electron Paramagnetic Resonance: A Powerful Tool for Monitoring Working Catalysts

Angelika Brückner

I. Introduction and Scope	266
II. Fundamentals and Methods of EPR Spectroscopy for Characterization of Working Catalysts	267
A. Basic Principles and Approaches for Evaluation of EPR Spectra	267
B. Experimental Equipment for Monitoring Working Catalysts by EPR Spectroscopy	272
1. Measurements at High Temperatures and Atmospheric Pressure	273
2. Measurements at Higher Temperatures and Pressures	274
3. Matrix Isolation Electron Spin Resonance	275
III. Examples	277
A. Following the Formation of Active Catalysts from Precursor Structures	277
1. Influence of Gas Atmosphere on Transformation of VOHPO ₄ ·0.5H ₂ O	277
2. Monitoring the Formation of MCM-type Catalysts by Spin Probes	281

B. Assessing the Nature of Active TMI during Catalytic Redox Processes	284
1. Vanadium-Containing Oxide Catalysts in Selective Oxidation of n-Butane	284
2. FeZSM-5 Catalysts in SCR of N ₂ O and NO	287
C. Detection of Radical Intermediates in Heterogeneous Catalytic Processes	292
1. Isolating π -Allyl Radicals during Propene Oxidation by MIESR Spectroscopy	293
2. Detecting Hydroxyl Radicals in the Microwave-assisted Photocatalytic Decomposition of Hydrocarbons	295
D. Simultaneous Application of EPR Spectroscopy with UV-Vis and Raman Spectroscopy	298
IV. Benefits, Limitations, and Future Trends in the Application of EPR Spectroscopy in Catalysis.	303
Acknowledgments.	305
References	305

Mössbauer Spectroscopy in Heterogeneous Catalysis

Jean-Marc M. Millet

I. Introduction	310
II. Mössbauer Spectroscopy	310
A. Physical Principles and Current Capabilities	310
B. Hyperfine Interactions and Mössbauer Parameters	313
C. Spectral Analysis and Interpretations	317
D. Related Techniques	321
1. Emission Mössbauer Spectroscopy (EMS).	321
2. Conversion Electron Mössbauer Spectroscopy (CEMS)	322
III. Applications of Mössbauer Spectroscopy in Heterogeneous Catalysis.	323
A. Identification of Catalyst Components	323
1. Iron-Containing Catalysts	323
2. Tin-Containing Catalysts.	324
3. Gold-Containing Catalysts.	325
4. Antimony-Containing Catalysts	327
5. Catalysts Containing other Elements	327
B. Investigations of Catalysts in Reactive Atmospheres and under Working Conditions	328
1. Investigations of Functioning Catalysts.	329
2. Investigations of Quenched Catalysts	331
C. Investigation of Chemisorption of Reactants and Molecular Probes	332
IV. Perspective	333
A. Current Developments and Applications	333
1. Mössbauer Spectroscopy of Catalysts under Working Conditions	333
2. Mössbauer Spectroscopy of Catalysts below 4.2 K	333
3. Technological Advances and Theoretical Evaluation of Mössbauer Parameters	333
4. Mössbauer Spectroscopy and High-Throughput Catalyst Characterization.	335
5. Mössbauer Spectroscopy for Characterization of Membranes and Monoliths	335
B. Future Developments and Applications	336
1. Nuclear Forward Scattering (NFS) of Synchrotron Radiation.	337
2. Nuclear Inelastic Scattering (NIS) of Synchrotron Radiation	341
V. Conclusions	343
References	344

Characterization of Catalysts under Working Conditions with an Oscillating Microbalance Reactor

D. Chen, E. Bjorgum, K. O. Christensen, A. Holmen and R. Lodeng

I. Introduction	352
II. The Principle of Mass Measurement by TEOM	352
III. Description of a TEOM Experimental Set-Up	354
IV. Literature Survey of Application of Inertial Microbalance for Investigations of Working Catalysts	356
A. Investigations of Adsorption/Diffusion	357
B. Investigations of Carbon Formation and Catalyst Deactivation	358
C. Air Pollution Investigations	359
V. Methanol Conversion into Light Olefins Catalyzed by SAPO-34: A TEOM Investigation	360
A. Coke Formation and Deactivation Characterized by Pulse Mass Analysis.	360
B. Model of Coke Formation	363
1. Nature of Coke	363
2. Reaction Pathway for Coke Formation	365
C. Effect of Coke Deposition on Product Selectivity	365
D. Investigation of Adsorption under Catalytic Reaction Conditions	368
E. Diffusion and Reaction in SAPO-34	368
VI. Steam Reforming of Natural Gas	374
VII. Conclusions	378
References	379
