## CONTENTS

Overview 1  
Experience with the Use of the New ASTM E 813-87 2  
A Comparison of the J-Integral and CTOD Parameters for Short Crack Specimen Testing 19  
Normalization : An Experimental Method for Developing $J-R$ Curves 42  
Quantification of Engineering Limits to $J$ Control of Ductile Crack Growth 57  
Specimen Size Requirements for Elastic-Plastic Crack Growth Resistance Curves 81  
A Fracture Instability Data Qualification Limit 102  
Development of Eta Factors in Elastic-Plastic Fracture Testing Using a Load Separation Technique 114  
Obtaining $J$-Resistance Curves Using the Key-Curve and Elastic Unloading Compliance Methods : An Integrity Assessment Study 133  
Nonincremental Evaluation of Modified $J-R$ Curve 150  
Experience in Using Direct Current Electric Potential to Monitor Crack Growth in Ductile Metals 163  
Analysis of Deformation Behavior During Plastic Fracture 178  
Fracture Toughness and Fatigue Crack Initiation Tests of Welded Precipitation- Hardening Stainless Steel 197  
Experience with $J$ Testing of Type 304/308 Stainless Steel Weldment 213  
Key-Curve Analysis Linde 80 Welds 225  
Observations in Conducting $J-R$ Curve Tests on Nuclear Piping Materials 238  
Effect of Residual Stress on the $J-R$ Curve of HY-100 Steel 260  
Dynamic Fracture Toughness of Modified SA508C12 in the Ductile-to-Brittle Transition Region 273  
Discussion 289  
The Application of the Multispecimen J-Integral Technique to Toughened Polymers 290  
Fracture Toughness of Polycarbonate as Characterized by the J-Integral 306  
Determination of $J_{lc}$ for Polymer Using the Single Specimen Method 320
