

CONTENTS

CHAPTER I.

ELASTIC STRESS AND STRAIN.

	PAGES
Stress—Strain—Elastic limits—Elastic constants—Resolution of stress—Ellipse of stress—Circular diagram of stress—Principal planes and stresses—Principal strains	1-34

CHAPTER II.

MECHANICAL PROPERTIES OF METALS.

Elastic limit and yield point—Ductile strains—Metallography—Ultimate and elastic strength—Factor of safety—Measures of ductility—Actual and nominal stress—Effect of shape of test pieces—Detailed properties of important metals—Raising the elastic limit by strain—Hysteresis—Hardening and annealing—Influence of rate of loading—Compression—Fractures—Effects of temperature—Stress due to temperature changes	35-76
--	-------

CHAPTER III.

STRAIN-ENERGY AND STRENGTH.

Work done in tensile strain—Elastic strain energy—Live loads—Resistance to shock—Elastic failure with combined stresses—Fatigue—Brief history—Present knowledge—Limiting ranges of stress—Factors affecting endurance—Damping capacity, over-stressing and damage line—Explanation of fatigue failure—Factors of safety	77-119
---	--------

CHAPTER IV.

THEORY OF BENDING.

Straining actions—Shearing force and bending moments—Diagrams—Contraflexure—Funicular polygon—Relation between bending moment and shearing force—Theory of bending—Simple and other bending	120-145
---	---------

CHAPTER V.

STRESSES IN BEAMS.

	PAGES
Moments of inertia of sections—Graphical methods—Beams of uniform strength—Distribution of shear stress — Pitch of girded rivets—Principal stresses—Bending beyond elastic limit—Modulus of rupture—Unsymmetrical bending146-181

CHAPTER VI.

DEFLECTION OF **BEAMS**.

Uniform curvature—Relations between curvature, slope, and deflection —Various cases—Propped beams—Deflection and slope from bending-moment diagrams, with applications—Other graphical methods—Beams of varying cross-section—Carriage springs .	.182-225
---	----------

CHAPTER VII.

BUILT-IN AND CONTINUOUS BEAMS.

Simple cases—Effect of fixed ends—Symmetrical loading—Any loading—Varying section—Theorem of three moments—Simple and general cases—Wilson's method—Advantages and disadvantages of continuous beams226-257
---	----------

CHAPTER VIII.

SUPPLEMENT ON BENDING.

Transverse curvature—Strain energy of beams—Deflections from strain energy—Theorems of Clerk Maxwell and Castigliano —Carriage springs—Shear strain energy and deflections due to shearing — Statically indeterminate beams258-276
--	----------

CHAPTER IX.

DIRECT AND BENDING STRESSES.

Combined bending and direct stress—Eccentric loads—The S-polygon—Pillars, columns, and struts—Euler's theory—Use of Euler's formulæ—Rankine's and other formulæ — Comparison with experiments—Eccentric loads on long columns—Basis of B.S.S. working stress formula for columns—Thin tubular struts—Columns of varying section—Struts and tie-rods with lateral loads.277-320
---	----------

CHAPTER X.

TWISTING.

PAGES

Stress and strain in pure torsion—Relation to twisting effort—Hollow shafts—Non-circular shafts—Keyways—Thin tubes—Combined bending and torsion—Effect of end thrust—Torsion beyond elastic limit—Torsional strain energy—Helical spring close coiled and open coiled 321-344

CHAPTER XI.

PIPES, CYLINDERS, AND DISCS.

Thin cylindrical shell—Oval sections—Seams—Thin spherical shell—Thick cylinders—Dimensions for tubes and cylinders—Collapse of tubes—Thick spherical shell—Compound cylinders—Press fits on solid shafts—Wire wound tubes—Rotating ring or wheel rim—Rotating disc—Rotating cylinder—Rotating disc of varying thickness 345-403

CHAPTER XII.

BENDING OF CURVED BARS.

Theory of bending—Various sections—Stresses in hooks—Stresses in rings—Deformation of rings—Simple chain links—Flat spiral springs—Arched ribs with three and with two hinges—Fixed ribs—Temperature stresses—Hanging wires and chains. . . . 404-449

CHAPTER XIII.

FLAT PLATES.

Stress and strain in circular plate—Free and fixed plates—Distributed, concentric and central loads—Uniform load and central support—Approximate methods for non-circular plates—Oval, square, and rectangular plates 450-471

CHAPTER XIV.

VIBRATIONS AND CRITICAL SPEEDS.

Elastic vibrations—Free vibrations—Forced vibrations—Critical frequency—Dangerous speeds—Longitudinal vibrations—Transverse vibrations—Loaded and unloaded rods—Whirling speeds of shafts—Stress and deflection—Vibrations of rotating shaft—Effect of end thrust and twist—Torsional vibrations. . . . 472-496

CHAPTER XV.

TESTING MACHINES, APPARATUS AND METHODS.

PAGES

Typical testing machines—Tension tests—Form of test pieces—
 Methods of gripping—Shearing tests—Calibration of testing
 machine—Torsion testing machine—Fixtensometers—Auto-
 graphic recorders—Beam deflections—Torsional **strains**—
 Tension and torsion of wires—Bending of light beams—Deter-
mination of elastic constants (summary) 497-522 .

CHAPTER XVI.

SPECIAL TESTS.

Repeated and reversed stresses—Wbhler type and electrical machines
 —Single bend tests—Hardness tests and testing **machines**—
 Impact tests and machines—Optical determination of stress
 distribution 523-533

CHAPTER XVII.

SPECIAL MATERIALS.

Cement tests, machines and apparatus—Concrete, stone, **and brick**—
 Timber, strength and tests—Tension, compression, shearing, and
 bending tests—Prolonged loading—Strength of wire ropes. . 534-547

APPENDIX—Tension in a perforated plate 548-554

MATHEMATICAL TABLES 555-559

ANSWERS TO EXAMPLES 561-566

INDEX 567-571
