

CONTENTS

PART I. THE NATURE OF CERAMIC MATERIALS

CHAPTER 1	Introduction	
1-1	Ceramic materials	3
1-2	Ceramics versus metals	5
1-3	Ceramics versus organics	6
1-4	Background principles	6
CHAPTER 2	Atomic interaction in ceramic materials	
2-1	Introduction	8
2-2	Electronic structure of atoms	8
2-3	Interatomic spacings	17
2-4	Types of bonds	19
2-5	Ionic solids	20
2-6	Covalent bonds	23
2-7	Van der Waals bonds	24
CHAPTER 3	Crystalline ceramic materials	
3-1	Introduction	29
3-2	First neighbors (short-range order)	29
3-3	Crystals (long-range order)	32
3-4	Ceramic crystals	37
3-5	Imperfections	47
3-6	Polymorphism	54
CHAPTER 4	Glasses and other noncrystalline phases	
4-1	Introduction	57
4-2	The structure of glass	57
4-3	The composition of glass	60
4-4	Transformation range	65
4-5	Crystallization (devitrification) of glass	66
CHAPTER 5	Surfaces and interfaces	
5-1	Introduction	71
5-2	Surface adsorption	71
5-3	Ion exchange	74
5-4	Interfacial energies	76

CHAPTER 6	Equilibria and reactions between ceramic phases	
6-1	Introduction (phase rule)	79
6-2	Single-component systems	80
6-3	Polycomponent systems (binary)	83
6-4	Polycomponent systems (ternary and quaternary)	86
6-5	Rates of reaction	92
CHAPTER 7	Ceramic microstructures	
7-1	Introduction	97
7-2	Ceramic micrography	97
7-3	Grain Size	99
7-4	Grain shape and distribution	101
7-5	Phase quantities	105
7-6	Colloidal structures	106

PART 2. PROPERTIES AND BEHAVIOR OF CERAMIC MATERIALS

CHAPTER 8	Mechanical properties and applications	
8-1	Introduction	117
8-2	Elastic properties	117
8-3	Strength of ceramics	121
8-4	Structural ceramics	124
8-5	Abrasive materials	126
8-6	Plastic deformation in crystals	130
8-7	Viscous deformation	133
8-8	Rheology of colloidal structures	134
CHAPTER 9	Thermal properties and high-temperature behavior	
9-1	Introduction	140
9-2	Thermal expansion	140
9-3	Heat capacity	145
9-4	Thermal conductivity	147
9-5	Thermal stresses	151
9-6	High-temperature deformation	155
9-7	Refractory products	157
CHAPTER 10	Electrical magnetic properties and applications	
10-1	Introduction	167
10-2	Electrical conductivity	167
10-3	Ceramic conductors	174
10-4	Dielectric behavior	179
10-5	Ceramic insulators	188
10-6	Magnetic behavior	191

CHAPTER 11	Optical properties and behavior	
11-1	Introduction	202
11-2	Refraction and reflection	202
11-3	Transparency and color	207
11-4	Luminescence	210
11-5	Stimulated radiation (LASER)	212
CHAPTER 12	Nuclear applications	
12-1	Introduction	215
12-2	Alteration by radiation	215
12-3	Ceramics for core components	221
12-4	Shielding and waste disposal	223
 PART 3. THE PROCESSING OF CERAMIC PRODUCTS		
CHAPTER 13	Ceramic products: forming	
13-1	Introduction	227
13-2	Raw materials	227
13-3	Pressure fabrication	234
13-4	Hydroplastic forming	243
13-5	Slip-casting	245
13-6	Cementation	246
13-7	Vitreous shaping	251
13-8	Miscellaneous forming procedures	254
CHAPTER 14	Ceramic products: thermal treatments	
14-1	Introduction	259
14-2	Drying	259
14-3	Firing (sintering)	265
14-4	Annealing (and tempering)	275
14-5	Crystallization	277
APPENDIX A	Selected constants	285
APPENDIX B	Glossary of terms as applied to ceramic materials	285
APPENDIX C	Common ceramic phases	296
APPENDIX D	Table of elements and oxides	302
APPENDIX E	Properties of selected commercial materials	306
APPENDIX F	Selected phase diagrams	307

LIST OF SYMBOLS	319
ANSWERS TO PROBLEMS	232
INDEX	329
