CONTENTS

PREFACE v

ALARM CIRCUITS 1
- Beam-Direction Marker Circuit for Scope
  Gives Comet-Shaped Trace 28
- Magnetically Deflected Oscilloscope Uses 21-Inch Television Picture Tube 28

COMPUTER CONTROL CIRCUITS 31
- Transistorized Gate, Flip-Flop, Counter and Shaper Circuits for Digital Computers 31
- Read and Write Amplifier for Digital Data in Tape Systems 32
- Dual Chopper-Stabilized Operational Amplifier for Analog Computers 35
- Simple Operational D-C Amplifier Is Basis of Desk-Size Differential Analyzer 35
- Analog-Digital Converter Generates Pulse Frequency Proportional to D-C Input Voltage 36
- Direct-Coupled, Emitter-Coupled and Resistance-Coupled High-Speed Flip-Flops 38
- Transistorized Trigonometric Function Generator Provides Cosine of Input Voltage 39
- Precision Digital Delay Generator for Radar and Sonar Calibration and Target Simulation 40
- Sine-Cosine Approximator for Radar Computer Uses Diode Function Generator 43
- Nine-Bit Word Generator Checks Digital Computers at Pulse Rates up to 1 MC 44
- Probability Computer Produces Output Pulse When Noise Exceeds Reference Threshold 44
- Digital Computer Clock Circuits Use Germanium Transistors Either at Saturation or Cutoff 45
- Triangular-Wave Generator and D-C Operational Amplifier Serve in Analog Multiplier 47
- Transistor Matrix Gives Simultaneous Binary Addition and Multiplication 49
- Combined D-C Amplifier and Chopper Amplifier Give High Zero Stability 51
- Zero-Crossing Detector Aids Analysis of Brain Waveforms 51
- Transistorized Analog-Digital Converter Uses Feedback Subtraction 53

AUDIO CONTROL CIRCUITS 10
- Speech Rejector Differentiates between Damped Speech and Undamped Music 10
- Biased-Diode Squelch Circuit Mutes Magnetite-Tape Print-Through 12
- Speech-Music Discriminator Silences Radio Loudspeaker During Commercials 13
- Automatic Speech Amplitude Control Provides Differentiation and Clipping 14
- Automatic Fine Tuning Circuit Controls TV Sound-to-Picture Ratio 15
- Heartbeats Are Made Audible by Frequency-Modulating 1,000-CPS Oscillator 18
- Burst-Modulated A-F Transmitter Controls Tuned-Reed Induction Paging Receivers 18

CATHODE-RAY CONTROL CIRCUITS 20
- Ferrite Disk on Engine Shaft Generates Input for Cathode-Ray Rotation Analyzer 20
- Four-Thyratron Sawtooth Pulser Produces True Voltage-Current Curves on Scope 21
- Electronic Shutter for TV Kinescope Recorder Passes Exactly 525 Lines 22
- Isoecho Contour in Weather Radar Shows Center of Thunderstorm 23
- Signal-Triggered Sweep Magnifies Pulse Widths on Scope 24
- Synchronizer Feeds Transients to 12 Cathode-Ray Tubes Having Different Base Lines 26

COUNTING CIRCUITS 57
- Transistorized Decade Counter Uses Cascaded Bistable Multivibrators 57
CONTENTS

Batching Counter Actuates Solenoid at Predetermined Count and Resets Automatically . 57
Unijunction Transistors Simplify Design of Bistable Stages for Ring Counter . 59
Reversible Binary Counter Determines Variations in PCM Pulse Intervals . 60
Coincidence Detector Counts Missing Pulses in Radar Magnetron Output . 62
Automatic Bacteria Colony Counter Uses Anticoincidence Circuits . 64
Loudspeaker Serves as Microphone for Simple Shot and Blast Counter . 67
Predetermined Counter and Gate Fire Flashlamps in Missile Test Lab . 67
Four-Decade Decimal Counter Uses Beam-Switching Tubes . 69
Ring-of-10 Counter Having Four ON Stages Requires Only Three Feedback Resistors Per Stage . 72
Binary-Decimal Counter Uses Logical AND Gates in Feedback Loop . 74

DIRECT-CURRENT AMPLIFIER CIRCUITS . 76
Feedback Increases Input Impedance of Transistor D-C Amplifier . 76
D-C Amplifier for Voltmeters and Analog Computers Has Infinite Input Impedance and Infinite Voltage Range . 76
Wide-Band Differential Amplifier for Null Detection . 78
Silicon-Diode Electronic Chopper Stabilizes All-Triode D-C Amplifier . 79
Low-Drift Transistorized Differential D-C Amplifier Uses Silicon Temperature-Compensating Resistor . 81
Junction-Transistor D-C Amplifier for Transistor Voltmeter . 82
Differential Input Stage Improves Feedback Stabilization of D-C Amplifier . 83
Vibrating-Capacitor Modulator Changes D-C Output of Differential Analyzer to A-C . 84
Electronically Controlled Chopper Boosts Sensitivity of Infrared Detector . 84
Twin-Triode Electronic Chopper Handles High D-C Input Voltages . 86
Feedback Through Pentode Holds Cathode Follower at Unity Gain . 86
Simple Differential D-C Amplifier for Control Systems Amplifies Difference Between Two Signals . 88

MACHINE CONTROL CIRCUITS . 89
Size Control Circuit for Automatic Cylinder hone . 89

Level-Deviation Detector Locates Flaws in Magnetic Tape . 88
Recorded Tone Bursts Permit Dialing of 45 Taped Spot Announcements . 89
Automatic Stop Circuit for Tape Recorder . 91
Electrode Drive-Motor Servo for Spark Machining . 91
Auto Transmission Gear Contour Gage Controls Automatic Hobber and Gear Sorter . 93
Four-Transistor Inverter Drives Two-Phase Drag-Cup Servo Motor . 95
Muscle Potentials of Patients Control Respiration Rate of Iron Lung . 96
Tracer Control Circuit Maintains Constant Cutting Velocity for Milling Machine . 96
Three-Feed Control System for Metal-Cutting Band-Saw . 97
Carbon Dioxide Analyzer in Feedback Loop Controls Valve Motor . 98
Eight Audio Tones Recorded on Magnetic Tape Control Overhead Crane . 99
Circuit Controls Vacuum Actuators of High-Speed Tape Transport . 99

MAGNETIC AMPLIFIER CIRCUITS
Transistor Magnetic Inverter Uses Differential Multivibrator for Signal or Power Conversion . 100
Magnetic-Amplifier Square-Law Circuits Serve in Four-Quadrant Analog Multiplier . 100
Magnetic Amplifiers and Saturating Transformer Regulate D-C Power Supply . 101
Self-Balancing Magnetic Amplifier Drives 400-CPS Servo-Motor . 101
Magnetic Servo Amplifier Drives Gyro Indicator . 108
Magnetic Amplifiers Control Frequency and Voltage of Reflex Klystron . 109
Magnetic-Core Frequency Divider Controls ITV Sync Generators . 110
Half-Wave Magnetic Amplifier Drives Two-Speed High-Impedance Servo-Motor . 112
Saturable-Core Transistor Oscillator Integrates Gas Flow Data . 113
Synchronously Switched Biased Diodes Increase Gain of Magnetic Amplifier . 114

MEASURING CIRCUITS . 116
D-C Error Voltage of Resistor-Checking Wheatstone Bridge Is Amplified to Drive Go-No-Go Meter . 116
Circuit Delivers Pulse Width Proportional to Time That Signal Is Between Specified Voltage Levels . 117
Pulsed Eddy Currents Measure Thickness of Metal Coating on Base Metal ........ 118
Phase Comparator Locates Null as Float Moves Core of Differential Transformer in Liquid Density Gage ........ 119
Magnetic Quadrupole Is Probe of Magnetometer Using Servo Loop ........ 120
Fast-Acting Nonlinear Feedback Stabilizes Gain of Transistorized Pulse Amplifier .... 121
Erpmeter Uses Bolometer Bridge to Measure Energy of Discharging Capacitor .... 122
Automatic Range-Selecting Servo for Electronic Voltmeter ........ 123
Electronic Integrator-Amplifier Speeds Grading and Matching of Magnetic Cores .. 124
Hot-Wire Thermal Bridge Is Voltage Standard for Expanded-Scale A-C Voltmeter .... 125
Bootstrapped-Collector Circuit for Starved Transistor Has 500-Megohm Input Resistance ........ 126
Differentiating Circuit Accurately Locates Zero of A-C Voltage .......... 127
Counter on Shaft of Servo-Driven Self-Balancing Potentiometer Gives Digital Presentation for VTVM ........ 128
Tuned Voltmeter Measures First Four Harmonics of Power-Line Frequency .... 129
Meacham-Bridge Oscillator and Frequency Detector Measure Ice Coating Thickness. Admittance-Measuring Circuit Determines Setting Time of Cement ................ 130
Linear Potentiometer and Operational Amplifier Serve as Wide-Range Tachometer .. 131
Capacitance Pickup on Angle-of-Attack Potentiometer Boosts Accuracy .......... 134
Schering Bridge and Phase-Sensitive Voltmeters Sort Capacitors in Tolerance Ranges ................ 135
Portable Vibration Meter Uses Transistorized Integrating Amplifier and Demodulator .......... 137
Automatic Waveform Detector Uses Time-Sampling to Sort Ferrite Cores ........ 138
Thickness of Nonferrous Metals Is Gaged by Electromagnetic Absorption .......... 140
Flutter and Wow Meter Measures Variations in Tape Recorder Transport Speed .... 141
Checking Insulation Resistance of Pressure-Sensing Potentiometers ........ 142
Second-Harmonic Flux-Gate Magnetometer Serves as Steel Tubing Hardness Tester .... 143
Tester Checks Static and Dynamic Unbalance of Dual-Triode Sections .......... 144
Dual-Channel Doppler Radar Serves as Rate-of-Climb Meter ........ 145
Automatic Go-No-Go Comparator Makes 350 Checkout Measurements on Missile ... 147

METAL DETECTOR CIRCUITS ........ 150
Proximity Control Responds to Any Metal Near Pickup Coil ........ 150
Magnetic Concentricity Gage Trips Flashtube Trigger Circuit ........ 150
Detector Traces Buried Cables Carrying 250-CPS Signal .......... 152
Tack Detector for Shoes Trips Alarm When Probe Touches Metal .......... 153
Inexpensive Metal Detector Locates Concealed Conduits, Pipes and Ducts ........ 154

MULTIVIBRATOR CIRCUITS ........ 156
Two Multivibrators and Variable Delay Line Generate Variable-Width Pulses .... 156
A-C Tachometer Drives Multivibrator Circuits of Expanded-Scale Speed Indicator .. 156
Multivibrator, Blocking Oscillator and Counter Circuits Simulate Radar Targets .... 158
Fast-Switching Multivibrator-Controlled Relay Circuit ........ 159
Electronic Chopper Replaces Vibrator in Television Modulation Indicator .......... 160
Simple Sweep Generator for Oscilloscopes Has Range up to 500 KC ........ 161

NUCLEONIC CIRCUITS ........ 163
Transistorized Geiger-Muller Probe Traces Radioisotopes in Oil Well ........ 163
Time Interval Analyzer Uses Modified Chronotron Circuits to Time Nuclear Particle Flights .......... 163
Transistorized Geiger Counter Has High-Voltage Generator and Ratemeter ...... 165
Cold-Cathode Count-Rate Circuits Monitor Alpha Radiation ........ 167
Eddy-Current Circuit Detects Hairline Flaws in Fine Wire .......... 167
Time-of-Arrival Indicator Blows Fuse to Stop Clock When Radioactive Fallout Arrives .......... 168
Transistorized Gamma-Radiation Monitor Uses D-C/D-C Converter .......... 169
Simple G-M Radiation Monitor and Recorder .......... 171

OSCILLATOR CIRCUITS ........ 172
Self-Quenching Superregenerative Oscillator Produces Pulses of 500-CPS Tone .. 172
Pulse Generator Feeds Controlled-Duration Signals to Two Channels .......... 172
Pulse Modulator Generates Uniform Pulses for Widely Varying Load ........ 172
PHOTOELECTRIC CIRCUITS

Camera Shutter Tester Uses Photodiode to Feed D-C Amplifier ........ 191
Multiplier Phototube on Lathe Drives Electronic Counter That Reads Microniches 192
Photoelectric Function Generator Uses Oscilloscope as Light Source 193
Photoelectric Illumination Control Responds to Bright Sunlight 195
Vidicon Camera Circuits Detect Changes in Nearly Identical Photographs 195
Banks of Multiplier Phototubes Give Coordinates of Test Missile 196
Photocell-Controlled Multivibrator Generates Tone Frequency Proportional to Light 198
Photoelectric Counter Checks Frame Rate of Movie Camera 198
Three-Phototube Pickup Checks Hue and Saturation of Color TV Tubes 199

CONTENTS

Beat-Frequency Sub audio Oscillator Requires No Output Amplifier .......... 175
Electronic Organ Uses Neon Lamps as Tone Generators and Frequency Dividers 176
Closed-Loop Regulator Controls High-Power Induction Heater ............ 177
Direct-Coupled Multiple-Feedback R-C Oscillator Covers 4 CPS to 350 KC 178
Variable-Frequency Oscillator Controls Firing Rate of Machine Guns 179
Double-Triode and Two Diodes Generate Negative-Going Staircase 180
Oscillator Provides Beeps Required when Recording Telephone Conversations 181
Thyratron Delivers Predictable Half-Sine Pulse When Triggered ........ 181
Fork-Controlled Generator Provides Seven Standard Audio Frequencies Simultaneously 182
Oscillator-Sharing Simplifies Circuit of Electronic Organ ......... 184
Neon Tubes Back to Back Generate Keep-Alive Pulses for Recorder 185
Low-Distortion Audio Oscillator Uses Biased Diodes to Eliminate Hunting 186
Transistorized Crystal-Controlled 1-MC Oscillator Is Highly Stable 187
Sonar Target Simulator Produces Echo Signal for Servicing Purposes 188
Variable-Gain Negative-Feedback Amplifier Stabilizes Feedback Oscillator .... 188
Frequency Meter Quickly Measures Dynamic Compliance of Phono Cartridge 189
Frequency Comparator Applies Error Voltage to Repeller of Klystron Oscillator .... 189

POWER SUPPLY CONTROL CIRCUITS ............................. 204

Overcurrent Protection Circuit for Transistor Power Supply ............ 204
Energy in Received Radio Waves Provides Operating Power for Transistor Circuits 205
Junction Transistor Serves as Ripple Filter for Low-Voltage Power Supply .... 207
Control of Instantaneous Voltage and Current in Power Transistor Boosts Efficiency 207
Servo Discriminator Feeding Silicon-Diode Modulator Controls Aircraft Alternator Frequency . 208
Crystal-Controlled 28-Volt Bistable Voltage-Doubling Chopper Drives Synchronous Clock 209
Photoflash Power Converters Use Power Transistors in Symmetrical Inverter and Blocking Oscillator Circuits 210
Zener Diodes and Silicon Transistor Regulate Output of Bridge Rectifier 212
Controlled-Firing-Time Thyatron Inverter Eliminates Bulky Saturable Reactors 212
Solid-State Rectifiers and High-Current Regulator Tubes Eliminate Power Transformer in Regulated Power Supplies 214
R-F Power Supply Replaces Vibrator Supply for Portable Infrared Viewers 215
Regulated Transistor Power Supply Uses Direct-Coupled Amplifier in Feedback Loop 216
Transistorized Power and Bridge Excitation Supply for Strain-Gage System 216
High-Voltage Power Supply Uses 12.5-KC Oscillator and Corona-Tube Regulator 218
Variable-Frequency Power Supply for Servo Testing Uses Pentode Cathode Followers 219
Triode Serves as Grid Leak Resistor in Regulated Power Supply 220

PROCESS CONTROL CIRCUITS ................................... 222

Basic Amplifier, Modulator, Demodulator and Power Supply Circuits for Process Control 222
Audio-Level Trigger Circuit Shuts Off Crystal Lapping Machine 224
Closed-Loop Controller Provides Rate and Reset Action 225
Three-Channel Decade Counter Controls Flow of Liquid Plastics 226
Pressure Transmitter Controls Tuned Oscillator for Set-Point Control 227
Galvanometer-Type Controller Feeds F-M Circuit Giving D-C Output 227
**CONTENTS**

SERVOMECHANISM CIRCUITS

- Servo-Amplifiers Use Power Transistors to Drive A-C or D-C Motors 242
- Silicon Power Transistors Drive Split Control Winding or Servo-Motor 242
- Zener Diode in Feedback Loop Provides AGC for A-C Servo 243
- Servo Accelerometer Uses R-F Oscillator with Null Balance 244
- Servo Positioner for Component Inserter Is Programmed by Cards or Tape 245
- Self-Setting Servo Gate Rejects Random Interference Pulses 246
- Negative Feedback Provides Stability for Push-Pull Transistor Servo Amplifier 247
- Servo System Controlled by Radar I-F Signal Tunes Magnetron for Search or AFC 248
- Phase-Selective Gate Rejects Quadrature Signals in Servo Loop 250
- Transistorized Relay Servo Uses Step-Function Potentiometer 251
- Transistorized Servo Amplifier Drives Two-Speed Motor Directly 251
- Four-Transistor Preamplifier Feeds Transistor-Magnetic Amplifier Servo 252
- Simple Infrared Analyzer Detects Leaks in Air Chamber 253
- Phase-Stabilized UHF Servo Amplifier Controls Steerable Antenna 256

REMOTE CONTROL CIRCUITS

- Transmitter and Receiver Circuits for Radio-Controlled Garage-Door Opener 230
- Single-Stage Franklin Superregenerator for Radio Remote Control 230
- Ultrasonic Gong Controls Four Functions in TV Set 232
- Carrier-Current Control Through Power Line Tunes TV Set 233
- Microwave Link Controls Fog Alarm on Unattended Island Site 234
- Selective A-F Circuit Fires Squib or Operates Relay for Missile Control 235
- Ultrasonic Tones Control Tuning Motor in TV Set 236
- Tone-Actuated Programmer Mixes Records with Taped Announcements 237
- Two-Transistor Superregenerative Remote Control Receiver 240
- Flashlight Operates Photoelectric Remote Control for TV Set 241

SWITCHING CIRCUITS

- Simple Electronic Switch Gives Transient-Free Commutating 264
- Zener Diode Controls Triggering Level of Push-Pull Transistor Relay 267
- Ring-of-Five Neon-Lamp Oscillator Provides Sequential Switching 267
- Clearing, Resetting and Transfer-Storage Circuits for Beam-Switching Tubes 267
- D-C Voltage Comparator Actuates High-Speed Transistorized Electronic Switch 267
- Balanced-Input Transistorized Electronic Relay 267
- Two-Way Sampling Switch Using Compensated Comparators Has High Input Impedance 267
- Beam-Switching Tube Switches Low-Level Capacitive Transducer Signals 267
- Voice-Actuated Switching Circuit Controls Microwave Party Line 267
- Triode Makes Relay Pull-In and Drop-Out Currents Equal 267
- Multichannel Electronic Switch for Oscilloscope Uses Flip-Flops in Ring 267
- Electronic Crowbar Shorts Power Supply of High-Power Transmitting Tube to Prevent Flash-Arc Damage 267
- Coincidence Diodes Gate Transistorized Six-Channel Electronic Switch 267
- Saturated and Nonsaturated Transistor Flip-Flops Use Single and Double Triggering 274
- Ultrasonic Switch Controls Diversity Receivers 275

TELEMETERING CONTROL CIRCUITS 276

- Transistorized Micromicroammeter Feeds Radiation Data to Satellite Telemeter 276
- Underwater Telemetering System Uses Four 60-KC Ultrasonic Links 276
- Pulse-Position Telemetry Demodulator Compensates for Parameter Variations 278
- Transistorized Telemeter Transmitter for Balloon-Borne Radiation Detection 278
- Transistorized PDM Keyer Improves Airborne Telemetering System 279
- Telemetering Equipment in Sounding Balloon Monitors Cosmic Radiation 279
- Encoded Shaft Position Data Is Transmitted over Telephone Line 284
- Telemetering Transmitter in Rocket Produces PWM F-M Signals 288
- Eight-Transistor Transmitter Telemeters Scalp Voltages 289
- Telemetering Demodulator Converts Wide-Band F-M Data to PFM Data 289
TEMPERATURE CONTROL CIRCUITS

Proportional Heat Control Maintains Thermal Chamber at Preset Value

Thermopile Actuates Current-Adjusting Temperature Controller

Servo-Balanced Bridge for Compensated Thermocouple Gives Jet Engine Temperature

Germanium Transistor Serves as Thermostat for Cold Junction

TIMING CIRCUITS

Extending Linearity Range of Thyatron Interval Timer

Phantastron Circuit and Miller Integrator Used in Exposure Timer

Millisecond Timer and Thyatrons Stop Die-Cutting Press after Cut-Through

Doppler Radar Speed Meter Checks Highway Traffic

Regenerative Frequency Dividers for 1-MC Crystal Source Provide 1-KC Power for Precision Clock

Four-Thyratron Timer Triggered by Vertical Drive Pulses Exposes Camera for One TV Frame

Double-Triggering Improves Stability of Phantastron Frequency Divider

Current Transformer and Electronic Relay Turn on Running-Time Meter When Any Power Tool Is Used

Ticks of Master Clock Synchronize Time Base of Cathode-Ray Watch Timer

Astable Multivibrator Controls Pentode Gate for Pulsing Circuit

ULTRASONIC CIRCUITS

Doppler-Effect Ultrasonic Burglar and Fire Alarm

Battery-Operated Resonance-Type Ultrasonic Thickness Gage

Ultrasonic Vibrator Makes Beer Foam to Drive Out Air

Adjustable Ultrasonic Paths in Air Simulate Multipath Communications

Ultrasonic Pulses Detect Flaws in Coating of Uranium Slug

Two-Transistor Broadband Ultrasonic Preamplifier for Hydrophones

Pulsed Frequency-Modulated System Analyzes Ultrasonic Signal Returns

Piezoelectric Transducer Drives Tip of Ultrasonic Soldering Iron

Ultrasonic Phase Meter Measures Subsurface Water Velocity

Quartz-in-Water Delay Line Simulates Radar Moving Targets

Two-Receiver Ultrasonic System Measures Propagation in Sea Water

Driver for Magnetostriction Transducer of Ultrasonic Impact Grinder

WELDING CONTROL CIRCUITS

Capacitor-Discharge Spotwelder Controls Handles Metal Foils

Timer Controls Thyatrons in High-Speed Resistance Welder

Five-Function Programming Timer Controls Electrode Welder

Toroid Feeding A-C Electronic Voltmeter Measures Spot-Welding Current
