

# CONTENTS

	List of Contributors	xi
	Preface	xiii
<b>Chapter 1</b>	<b>Silicon Crystal Growth</b>	
	W. Lin	
	K. E. Benson	
1.1	Introduction	1
1.2	Growth Characteristics	
1.3	Impurity Incorporation	6
1.4	Trends in Large-Diameter Silicon Growth	18
1.5	Conclusions	23
<b>Chapter 2</b>	<b>Silicon Epitaxy</b>	
	McD. Robinson	
2.1	Introduction	25
2.2	EPI Equipment	27
2.3	Deposition	29
2.4	Doping	40
2.5	Autodoping	43
2.6	Pattern Shift	52
2.7	Defects	56
2.8	EPI Characterization	66
2.9	Conclusions	73
<b>Chapter 3</b>	<b>Silicon Oxidation</b>	
	G. J. Declerck	
3.1	Introduction	79
3.2	Oxide Formation	79
3.3	Silicon Dioxide Properties	109
3.4	Conclusions	127

<b>Chapter 4</b>	<b>Physical Vapor Deposition</b>	
	W. D. Westwood	
4.1	Introduction	133
4.2	Deposition Methods	136
4.3	Alloys and Compounds	164
4.4	Film Properties	182
4.5	Conclusions	195
<b>Chapter 5</b>	<b>Chemical Vapor Deposition</b>	
	W. Kern	
5.1	Introduction	203
5.2	Some Basic Aspects of CVD	205
5.3	Types of CVD Processes	211
5.4	Production CVD Reactor Systems	218
5.5	Deposition of Various Materials for VLSI Device Fabrication	224
5.6	Conclusions	240
<b>Chapter 6</b>	<b>Dielectric Materials</b>	
	W. Kern	
6.1	Introduction	247
6.2	Dielectric and Insulator Materials and their Applications in VLSI Technology	248
6.3	Methods of Film Formation and Equipment	252
6.4	Vertical Insulation in VLSI Technology	258
6.5	High Temperature Interconductor Insulation	258
6.6	Low Temperature Intermetal Insulation	263
6.7	Over-Metal Passivation Layer	269
6.8	Conclusions	270
<b>Chapter 7</b>	<b>Properties and Applications of Silicides</b>	
	S. P. Murarka	
7.1	Introduction	275
7.2	Properties	279
7.3	Formation of Silicides and their Processing	293
7.4	Process Stability of Silicides-Resistivity, Stress and Device Reliability	317
7.5	Limitations	318
7.6	Conclusions	310

<b>Chapter 8</b>	<b>Forefront of Photolithographic Materials</b>	
	G. N. Taylor	
8.1	Introduction	325
8.2	Extending Positive Resist Performance in the UV Region	326
8.3	Negative Resist Materials Which Do Not Swell During Development	335
8.4	Image Reversal Techniques	341
8.5	Contrast Enhancing Materials (CEMs)	347
8.6	Amplification in Photoresist Technology	353
8.7	Deep UV Resists	357
8.8	Multilevel Resist Technology and Planarization	368
8.9	Bilayer Resist Processes	372
8.10	Gas-Phase-Functionalized Plasma-Developed Resists	389
8.11	Conclusions	401
<b>Chapter 9</b>	<b>Fine-Line Lithography</b>	
	A. N. Broers	
9.1	Introduction	409
9.2	Basic Fabrication Processes and Ultimate Resolution	410
9.3	UV Shadow Printing	413
9.4	X-Ray Lithography	414
9.5	Ion and Electron Beam Proximity Printing	419
9.6	Optical Projection	420
9.7	Scanning Electron Beam Lithography	427
9.8	Scanning Ion Beam Lithography	451
9.9	Conclusions	454
<b>Chapter 10</b>	<b>Dry Etching Processes</b>	
	D. W. Hess	
10.1	Introduction	459
10.2	RF Glow Discharges (Plasmas)	461
10.3	Etching Considerations	474
10.4	Profile Control	491
10.5	Process Monitoring (Diagnostics)	496
10.6	Other Dry Etch Techniques	510
10.7	Radiation Damage	511
10.8	Safety Considerations	513
10.9	Conclusions	513

**Chapter 11 Ion Implantation**

E. Rimini

11.1	Introduction	521
11.2	Ion Implanters	522
11.3	Range Distributions	529
11.4	Ion Damage	550
11.5	Annealing of Implanted Dopant Impurities	555
11.6	Ion Beam Annealing	571
11.7	Conclusions	576

**Chapter 12 Diffusion in Semiconductors**

U. Gösele

12.1	Introduction	583
12.2	Phenomenological Description	584
12.3	Point Defects and Atomistic Diffusion Mechanisms	590
12.4	Diffusion in Silicon	596
12.5	Diffusion in Germanium	622
12.6	Diffusion in Gallium Arsenide	623
12.7	Conclusions	629

**Chapter 13 Interconnect Materials**

Y. Pauleau

13.1	Introduction	635
13.2	Material and Process Requirements for VLSI Technology	637
13.3	Gate Metallization	638
13.4	Metal-Silicon Contacts	650
13.5	Interconnect Lines	665
13.6	Conclusions	674

**Chapter 14 Imperfection and Impurity Phenomena**

K. V. Ravi

14.1	Introduction	679
14.2	Imperfections and Impurities	680
14.3	Electrical Phenomena	717
14.4	Defect-Free Processing	735
14.5	Conclusions	767

**Chapter 15 Process Simulation**

W. Fichtner

15.1	Introduction	775
15.2	Epitaxy	776
15.3	Ion Implantation	783
15.4	Diffusion	795
15.5	Lithography	810
15.6	Conclusions	839

**Chapter 16 Diagnostic Techniques**

H. W. Werner

16.1	Introduction	845
16.2	Physical Background of Diagnostic Techniques	852
16.3	Analytical Aspects of Diagnostic Techniques	862
16.4	Areas of Application of Diagnostic Techniques	871
16.5	Specific Features and Applications of the Different Methods	871
16.6	Conclusions	966
16.7	Explanation of Acronyms and Abbreviations	973

	<b>Index</b>	<b>981</b>
