Preface xi

Chapter 1. Natural Waste Treatment Systems: An Overview

1.1 Natural Treatment Processes	1
Background	1
Wastewater treatment concepts and expectations	2
1.2 Project Development	9
References	9

Chapter 2. Planning, Feasibility Assessment, and Site Selection 11

2.1 Concept Evaluation	11
Resources required	13
Preliminary estimates of land area	13
2.2 Site Identification	21
Screening procedure	21
Climate	24
Flood hazard	25
Water rights	27
2.3 Site Evaluation	28
Soils investigation	29
Infiltration and permeability	33
Buffer zones	40
2.4 Site and Process Selection	40
References	41

Chapter 3. Basic Process Responses and Interactions 43

3.1 Water Management	43
Fundamental relationships	44
Movement of pollutants	47
Groundwater mounding	51
Underdrainage	59
3.2 Biodegradable Organics	60
Removal of BOD	61
Removal of suspended solids	62

6.7	Design Models for BOD Removal	221
	Free-water-surface wetlands	223
	Subsurface-flow wetlands	226
	Preliminary treatment	231
6.8	Design Models for TSS Removal	232
6.9	Design Models for Nitrogen Removal	234
	Free-water-surface wetlands	235
	Subsurface-flow wetlands	239
	Nitrification filter bed	246
	Summary	250
6.10	Design Models for Phosphorus Removal	250
6.11	Design of On-site Systems	252
6.12	Vertical-Flow Wetland Beds	256
6.13	Wetland Applications	258
	Domestic wastewaters	258
	Municipal wastewaters	259
	Commercial and industrial wastewaters	260
	Stormwater runoff	261
	Combined sewer overflows	263
	Agricultural runoff	265
	Livestock wastewaters	268
	Landfill leachates	269
	Mine drainage	272
6.14	Construction Requirements	275
	Subgrade construction and liners	275
	Vegetation	277
	Inlet and outlet structures	277
	Costs	279
6.15	Operation and Maintenance	280
	Vegetation	280
	Mosquito control	281
	References	281
Chapter 7. Land Treatment Systems		285
7.1	System Types	285
	Slow-rate systems	285
	Overland-flow systems	286
	Rapid-infiltration systems	287
7.2	Slow-Rate Systems	289
	Design objectives	289
	Preapplication treatment	290
	Crop selection	291
	Loading rates	293
	Land requirements	302
	Storage requirements	303
	Application scheduling	303
	Distribution techniques	304
	Control of surface runoff	304
	Underdrainage	306
	System management	307
	System monitoring	309

7.3	Overland-Flow Systems	309
	Design objectives	309
	Site selection	310
	Preapplication treatment	310
	Climate and storage	311
	Design procedure	311
	Land requirements	315
	Vegetation selection	318
	Distribution system	319
	Slope design and construction	320
	Runoff collection	320
	Recycling	320
	System management and monitoring	320
7.4	Rapid-Infiltration Systems	321
	Design objectives	321
	Design procedure	321
	Treatment performance	322
	Nitrification	322
	Nitrogen removal	323
	Phosphorus removal	325
	Preapplication treatment	325
	Hydraulic loading rates	326
	Organic loading rates	328
	Land requirements	328
	Basin construction	330
	Winter operation in cold climates	331
	System management	331
	System monitoring	332
	References	332
 Chapter 8. Sludge Management and Treatment		 335
8.1	Sludge Quantity and Characteristics	335
	Sludges from natural treatment systems	337
	Sludges from drinking-water treatment	338
8.2	Stabilization and Dewatering	339
	Methods for pathogen reduction	339
8.3	Sludge Freezing	340
	Effects of freezing	340
	Process requirements	340
	Design procedures	342
	Sludge freezing facilities and procedures	345
8.4	Reed Beds	347
	Function of vegetation	348
	Design requirements	349
	Performance	350
	Benefits	352
	Sludge quality	353
8.5	Vermistabilization	353
	Worm species	353
	Loading criteria	354
	Procedures and performance	354
	Sludge quality	355

x Contents

8.6 Comparison of Bed-Type Operations	356
8.7 Composting	357
8.8 Land Application and Surface Disposal of Sludge	362
Concept and site selection	365
Process design, land application	367
Design of surface disposal systems	377
References	383
Chapter 9. On-site Wastewater Management Systems	387
9.1 Types of On-site Systems	387
9.2 Site Assessment	388
Preliminary site evaluation	390
Detailed site assessment	390
9.3 On-site Treatment Alternatives	394
Septic tanks	394
Imhoff tanks	396
Oil and grease removal	397
Intermittent sand filters	397
Recirculating fine gravel filters	400
Alternative nitrogen-removal processes	404
Package aeration systems	406
9.4 On-site Disposal Alternatives	406
Gravity leachfields	408
Pressure-dosed distribution	410
Fill systems	412
At-grade systems	412
Mound systems	413
Artificially drained systems	413
Evapotranspiration systems	413
9.5 Management of On-site Systems	414
References	415
Appendix	417
Table A.1 Metric Conversion Factors (SI to U.S. Customary Units)	418
Table A.2 Conversion Factors for Commonly Used Design Parameters	420
Table A.3 Physical Properties of Water	421
Table A.4 Dissolved Oxygen Solubility in Fresh Water	422
