

Contents

<i>Preface</i>	v
1 The Place of Chemical Rockets in Advanced Propulsion Concepts	1
I. Introduction	1
II. The Status of Chemical Propulsion	2
III. Nonchemical Propulsion	17
IV. Related Soviet Propellant Research	28
References	30
2 A Review of Operational Propellants—Their History and Current Usage	33
A COMPARISON OF SOLID AND LIQUID FUEL ROCKETS	34
SOLIDS	36
I. General	36
II. Types of Propellant—Composition and Preparation	40
III. Ballistic Characteristics	53
IV. Solid Propellant Ignition and Igniters	79
V. Grain Design	86
VI. Mechanical Behavior of Solid Propellants	89
VII. Materials and Manufacture of the Case	95
VIII. Surveillance of Solid Propellant Rockets	98
IX. Hazards Evaluation of Solid Propellants	104
X. Experimental Determination of Performance	108
LIQUIDS	110
I. General	110
II. Propellants and Their Selection	117
III. The Burning of Liquid Propellants	138
IV. Pressurization	145

V. Liquid Rocket Engine Control	146
VI. Cooling of Rocket Motors	147
References	151
3 A Review of Developmental Propellants	157
LIQUIDS	158
I. Current Trends	158
II. Metallized Liquid Propellants	167
III. Storability of Liquid Propellants	171
IV. Propellants	182
V. Development Problems of Liquids	200
SOLIDS	201
I. Current Trends	201
II. Propellants	206
III. Special Applications	214
IV. Development Problems of Solids	222
HYBRID ROCKET PROPULSION	231
I. Introduction	231
II. Performance of Hybrid Motors	232
III. Current Status of Development	240
IV. Conclusions	243
AIR-BREATHING PROPULSION SYSTEMS	243
References	247
4 The Importance of Thermochemistry, Performance Calculations, and Combustion	251
I. Thermochemistry and Performance Calculations	251
II. Combustion	297
References	320
5 Advanced Propellant Ingredients	323
I. Energy Storage	324
II. Oxidizers	331
III. Fuels	344
References	346

6 Special Topics	353
I. Structural Integrity of Solids	353
II. Encapsulation of High Energy Substances	357
III. Hazards to Propellant Tanks from Meteoroid Impact	359
IV. Micromotors	360
V. Thrust Vector Control	360
VI. Plume Signal Interference	366
VII. Materials	369
VIII. Spacecraft Waste as Propellant	372
IX. The Rocket Motor as a Chemical Reactor	373
X. Mission Analyses	374
References	374
7 The Nature of the Advanced Propellant	377
I. The Advanced Propellant	378
References	380
Appendix A Rocket Propulsion Elements	381
Appendix B Flame Technology Compared with Propellant Technology	390
I. Introduction	390
II. Other Forms of Flame Agents	392
III. Combustion Characteristics	393
IV. Gel Characteristics	398
V. New Ingredients to Improve Heat Flux	400
VI. Conclusions	403
Appendix C Explosives Technology Compared with Propellant Technology	405
I. Introduction	405
II. History	406
III. Simple Detonation Theory	407
IV. Low Velocity Detonations	415
V. Deflagration-to-Detonation Transition (DDT)	418
VI. Initiation	419
VII. Sensitivity Measurement	429
References	432
<i>Author Index</i>	435
<i>Subject Index</i>	445
