|--|-----------------|
| <u>INTRODUCTION</u>                                | 1               |
| <u>SECTION A. THE SUGARS IN MOLASSES</u>           | 2               |
| Sucrose  | 2               |
| Fructose   | 2               |
| Glucose  | 2               |
| Reducing Sugars                                    | 2               |
| Hydrolysis of Sucrose                              | 2               |
| Polarised Light                                    | 3               |
| Lane-Eynon Double Reduction                        | 3               |
| Method of Raffinose                                | 4               |
| Unfermentable Reducing Substances                  | 4               |
| Total Sugars as Sucrose or as<br>Invert            | 4               |
| Standardisation of Analytical<br>Methods           | 5               |
| <u>SECTION B. THE COMPOSITION OF CANE MOLASSES</u> | 6               |
| Composition of Cane Molasses                       | 6               |
| Organic Acids                                      | 6               |
| Unfermentable Sugars                               | 8               |
| Theoretical Sugar Content of<br>Molasses           | 7/9             |
| Inorganic Matter                                   | 8               |
| Calcium  | 8/12            |
| Potassium  | 8/12            |
| Chlorine   | 8/12            |
| Copper   | 8/13            |
| Lead   | 8/13            |
| Zinc   | 8/13            |
| Nitrogen Compounds                                 | 10              |

|                          |    |
|--------------------------|----|
| Heating of Molasses      | 10 |
| Melanoidins              | 10 |
| <b>Maillard</b> Reaction | 10 |
| Vitamins                 | 11 |

SECTION C.                    THE COMPOSITION OF BEET MOLASSES                    **14**

|                              |       |
|------------------------------|-------|
| Composition of Beet Molasses | 14    |
| Melassigenic Effect          | 15    |
| Quentin Process              | 15    |
| Steffen Process              | 16    |
| Inorganic Matter             | 17/19 |
| Betaine                      | 17    |
| Glutamic Acid                | 17    |
| Organic Acids                | 18    |
| Vitamins                     | 18    |
| <b>pH</b>                    | 18    |
| Corrosion                    | 18    |

SECTION D.                    PROPERTIES OF MOLASSES                    **20**

|  |             |
|--|-------------|
| Viscosity and Temperature  | 20/21/27/28 |
| Specific Heat  | 21          |
| Hydrometer <b>Brix</b>   | 21/22       |
| Refractometer Brix   | 22          |
| Dry Matter   | 22          |
| Vacuum Oven  | 23          |
| Karl Fischer Moisture<br>determination                           | 24          |
| Table - Hydrometer Brix,<br>Refractometer Brix and<br>Dry Matter | 29/30       |
| Sugar Loss by Heating  | 24/25       |

|  |    |
|--|----|
| Vertical Kettles                                     | 52 |
| Water and Steam Addition                             | 52 |
| Absorption of Molasses by<br>Common Feed Ingredients | 53 |

SECTION I.

USE OF MOLASSES IN FERMENTATION

54

|  |       |
|--|-------|
| Enzymes  | 54    |
| Anaerobic and Aerobic<br>Fermentations             | 54    |
| Alcohol Production                                 | 55    |
| Preparation of Yeast Culture                       | 55    |
| Fermentation Conditions for<br>Alcohol Production. | 55    |
| Alcohol Quality                                    | 56    |
| Distillation                                       | 56    |
| Anhydrous Alcohol                                  | 57    |
| Use of Alcohol for Power                           | 57.   |
| Glycerine  | 57    |
| Carbon Dioxide Production                          | 58    |
| Baker's Yeast Production                           |       |
| Yield  | 58    |
| Cane and Beet Molasses                             | 58    |
| Conditions for Yeast Fermentation                  | 58    |
| Filtration of Yeast                                | 59    |
| Food Yeast   | 59    |
| Torula Yeast                                       | 59    |
| Candida utilis                                     | 59    |
| Combined Alcohol Yeast Yields                      | 59/60 |
| Citric Acid  | 60    |
| Aspergillus niger                                  | 60    |
| Citric Acid Fermentation<br>Conditions             | 61    |

|                           |    |
|---------------------------|----|
| Citric Acid and Pollution | 61 |
| Itaconic Acid             | 62 |
| Itaconic Acid Yields      | 62 |
| Monosodium Glutamate      | 62 |
| Butanol-Acetone           | 63 |

SECTION J.                    CONDENSED MOLASSES SOLUBLES                    66

|   |       |
|---|-------|
| Condensed Molasses Solubles<br>(C.M.S.)                     | 66    |
| Non-Sugar Organic Matter                                    | 66    |
| Pollution   | 66    |
| Nottingham University Research                              | 66    |
| Calculated Energy Values for<br>Ruminants, Pigs and Poultry | 67/70 |
| Nitrogen Value  | 67    |
| Palatability  | 68    |
| Viscosity   | 68/71 |
| Pelleting and Feeding Blocks                                | 68    |
| C.M.S. Composition Summary                                  | 69    |

|               |   |    |
