

Contents

1: General Information, 1

Basic formulas	2
Mathematics—areas.....	3
Mathematics—surfaces and volumes	4

Cables and Ropes 5

Estimating strength of cable.....	5
Find the working strength of Manila rope.....	5
How large should drums and sheaves be for various types of wire rope?.....	5
Find advantages of block and tackle, taking into account pull out friction.....	6
Safe loads for wire rope.....	6
Stress in guy wires.....	7
Strength and weight of popular wire rope.....	9
Measuring the diameter of wire rope.....	9
Wire rope: field troubles and their causes.....	9
Capacity of drums.....	11

Belts and Shafts 11

Determine length of a V-belt.....	11
Calculate stress in shaft key.....	12
Calculate V-belt length using simple equation.....	12
Estimate the horsepower that can be transmitted by a shaft.....	13

Miscellaneous..... 13

How to estimate length of material contained in roll.....	13
Convenient antifreeze chart for winterizing cooling systems.....	13
How to determine glycol requirements to bring a system to a desired temperature protection level.....	14
Weight in pounds of round steel shafting.....	14
Properties of shafting.....	15
Tap drills and clearance drills for machine screws.....	16
Common nails.....	17
Drill sizes for pipe taps.....	17
Carbon steel—color and approximate temperature.....	17
Bolting dimensions for raised face weld neck flanges.....	18
Steel fitting dimensions.....	19
ANSI forged steel flanges.....	20
Trench shoring—minimum requirements.....	21
Reuniting separated mercury in thermometers.....	22
Typical wire resistance.....	22
How to cut odd-angle long radius elbows.....	23
How to read land descriptions.....	24
Dimensions of hex nuts and hex jam nuts.....	26
Color codes for locating underground utilities.....	27
Approximate angle of repose for sloping sides of excavations.....	27
Size an air receiver for engine starting.....	28
Wind chill chart.....	29

Pipeline Pigging	30	Allowable pipe span between supports.....	51
Sizing plates	30	How engineers make pipe fit the ditch.....	52
Caliper pigging.....	30	Pipe Lowering	55
Cleaning after construction.....	30	How to lower an existing pipeline that is still in service.....	55
Flooding for hydrotest.....	31	Welding	58
Dewatering and drying.....	31	When should steel be preheated before welding?	58
Estimate volume of onshore oil spill	31	Welding and brazing temperatures	59
Estimating spill volume on water.....	33	Mechanical properties of pipe welding rods.....	59
Fluid Power Formulas	34	Lens shade selector.....	60
 		Pipeline Welding	60
2: Construction, 35		How many welds will the average welder make per hour?	69
Project Scoping Data	36	How much welding rod is required for a mile of schedule 40 pipeline?	69
Project scoping data worksheet for major facilities	36	How many pounds of electrodes are required per weld on line pipe?	69
Right-of-Way	38	Welding criteria permit safe and effective pipeline repair.....	70
How to determine the crop acreage included in a right-of-way strip.....	38	Cross country pipeline—vertical down electrode consumption, pounds of electrode per joint	76
Clearing and grading right-of-way: labor/equipment considerations.....	39	Guidelines for a successful directional crossing bid package.....	77
Estimating manhours for removing trees	39		
Estimating manhours for removing tree stumps.....	40		
Clearing and grading right-of-way.....	40		
Ditching	41		
How many cubic yards of excavation in a mile of ditch?	41		
Shrinkage and expansion of excavated and compacted soil.	41		
Ditching and trenching: labor/equipment considerations.....	41		
Concrete Work	42		
How to approximate sacks of cement needed to fill a form.....	42		
What you should know about mixing and finishing concrete.....	42		
Pipe Laying	43		
How to determine the degrees of bend in a pipe that must fit a ditch calling for a bend in both horizontal and vertical planes	43		
How to bend pipe to fit ditch—sags, overbends, and combination bends.....	43		
Pipe bending computations made with hand-held calculator	44		
Calculate maximum bend on cold pipe.....	48		
Determine length of a pipe bend	49		
Length of pipe in arc subtended by any angle.....	49		
Average pipelay table—underground.....	50		
Average pipelay table—on supports.....	51		
		3: Pipe Design, 85	
		Steel pipe design.....	86
		Properties of pipe	91
		Length of pipe in bends.....	93
		Calculation of pipe bends	94
		Spacing of pipe supports.....	96
		American standard taper pipe threads (NPT).....	98
		British standard taper pipe threads	99
		Normal engagement between male and female threads to make tight joints	100
		Hand-held computer calculates pipe weight, contents, velocity.....	100
		Formulas and constants of value in solving problems relating to tubular goods	103
		How to calculate the contraction or expansion of a pipeline	104
		Estimate weight of pipe in metric tons per kilometer ..	104
		How to find pipe weight from outside diameter and wall thickness	105
		What is the maximum allowable length of unsupported line pipe?	105
		Identify the schedule number of pipe by direct measurement	105
		Determine buoyancy of bare steel pipe	106

Determine buoyancy of bare and concrete-coated steel pipe in water and mud..... 106

Weights of piping materials..... 107

Allowable working pressure for carbon steel pipe..... 107

Find the stress in pipe wall due to internal pressure ... 108

How to calculate stress in aboveground/belowground : transition..... 109

How to identify the series number of flanged fittings .. 112

Dimensions of three-diameter ells with tangents 112

Spectacle blind thicknesses..... 112

Polypipe design data..... 113

4: Electrical Design, 117

Electrical design..... 118

Hazardous locations..... 119

NEMA Enclosure Types..... 120

Size portable electric generators..... 121

Typical wattages for tools and appliances..... 122

Knockout dimensions..... 122

National Electrical Code tables..... 123

Electrical formulas..... 127

Full load currents—single phase transformers..... 127

Conduit size for combinations of cables with different outside diameters..... 128

Minimum bending radius for insulated cables for permanent training during installation..... 128

Full load currents—three phase transformers..... 130

Motor controller sizes..... 130

Voltage drop on circuits using 600 V copper conductors in steel conduit..... 131

Determine the most economical size for electric power conductors..... 131

How to find the resistance and weight of copper wires..... 132

What you should remember about electrical formulas..... 132

How to calculate microwave hops on level ground..... 132

For quick determination of the horsepower per ampere for induction motors (3 phase) at different voltages..... 133

Chart of electric motor horsepower for pumping units..... 133

Pumping stations..... 134

Floodlighting Concepts..... 135

Terms..... 135

Floodlighting calculations..... 135

Point-by-point method..... 135

Beam-lumen method..... 136

Design procedure..... 136

Conductor size conversion chart—Metric to AWG..... 137

5: Hydrostatic Testing, 139

The Benefits and Limitations of Hydrostatic Testing..... 140

Hydrostatic testing for pipelines..... 151

Appendix A..... 157

Volume of water required to fill test section..... 157

Volume required at test pressure..... 158

Appendix B..... 159

How to use charts for estimating the amount of pressure change for a change in test water temperature..... 159

Basis for chart development..... 162

Compressibility factor for water..... 162

Hydrostatic test records..... 162

6: Pipeline Drying, 163

Pipeline Dewatering, Cleaning, and Drying..... 164

Dewatering..... 164

Cleaning pipelines..... 165

Brush pig run with gas..... 165

Brush pig run with liquid..... 165

Internal sand blasting..... 165

Chemical cleaning..... 166

Pipeline drying..... 166

Moisture content of air..... 168

Commissioning petrochemical pipelines..... 170

Vacuum drying..... 173

7: Control Valves, 177

Control valve sizing formulas..... 178

Sizing control valves for throughput..... 182

Control valve selection..... 187

Relief Valve Sizing, Selection, Installation, and Testing..... 189

Rupture disc sizing..... 193

Rupture disc sizing using the resistance to flow method (K_R)..... 194

Variable orifice rotary control valves..... 196

Sizing Valves for Gas and Vapor..... 198

Basic valve flow-capacity coefficient (C_V)..... 198

8: Corrosion/Coatings, 203

Hand-held computer determines concrete coating thickness.....	204
National Association of Pipe Coating Applications (NAPCA) specifications.....	206
How much primer for a mile of pipe?	209
How much coal-tar enamel for a mile of pipe?.....	210
How much wrapping for a mile of pipe?.....	210
Estimating coating and wrapping materials required per mile of pipe	210
Coefficient of friction for pipe coating materials.....	211
Troubleshooting cathodic protection systems:	
Magnesium anode system	213
Cathodic protection for pipelines.....	214
Estimate the pounds of sacrificial anode material required for offshore pipelines.....	222
Comparison of other reference electrode potentials with that of copper-copper sulfate reference electrode at 25°C.....	224
Chart aids in calculating ground bed resistance and rectifier power cost	225
How can output of magnesium anodes be predicted?.....	226
How to determine the efficiency of a cathodic protection rectifier.....	226
How to calculate the voltage drop in ground bed cable quickly.....	227
What is the most economical size for a rectifier cable?.....	227
How to estimate the number of magnesium anodes required and their spacing for a bare line or for a corrosion "hot spot".....	228
How can resistivity of fresh water be determined from chemical analysis?.....	228
What will be the resistance to earth of a single graphite anode?.....	229
How to estimate the monthly power bill for a cathodic protection rectifier.....	229
What will be the resistance to earth of a group of graphite anodes, in terms of the resistance of a single anode?.....	229
How can the current output of magnesium rod used for the cathodic protection of heat exchanger shells be predicted?.....	229
What spacing for test leads to measure current on a pipeline?.....	229
How many magnesium anodes are needed for supplementary protection to a short-circuited bare casing?.....	230
Group installation of sacrificial anodes.....	230
How can the life of magnesium anodes be predicted?.....	231

How to find the voltage rating of a rectifier if it is to deliver a given amount of current through a given ground bed (graphite or carbon)	231
Determining current requirements for coated lines.....	231
Determining current requirements for coated lines when pipe-to-soil potential values are estimated.....	231
HVDC effects on pipelines.....	232
Troubleshooting cathodic protection systems:	
Rectifier-ground bed	236
How to control corrosion at compressor stations	237
Project leak growth.....	238

Advances in Pipeline Protection 239

Methods of locating coating defects	240
Case histories	243
Estimate the number of squares of tape for pipe coating (machine applied).....	244
Estimate the amount of primer required for tape.....	245
Tape requirements for fittings.....	245

Induced AC Voltages on Pipelines May Present a Serious Hazard..... 246

Measuring Unwanted Alternating Current in Pipe	248
Minimizing shock hazards on pipelines near HVAC lines.....	253
Cathodic protection test point installations.....	254

9: Gas—General, 257

Know the gas laws	258
Calculate gas properties from a gas analysis	260
Physical properties of selected hydrocarbons and other chemicals and gases.....	264
Nomograph for calculating density and specific volume of gases and vapors	272

Considerations for Selecting Energy Measurement Equipment 273

Facts about methane and its behavior.....	279
Conversion table for pure methane	283
Categories of natural gas and reserves terminology	284
Glossary of common gas industry terms.....	285

10: Gas—Compression, 289

Compressors.....	290
Performance calculations for reciprocating compressors	291

Estimating suction and discharge volume bottle sizes for pulsation control for reciprocating compressors..... 293

Compression horsepower determination..... 295

Generalized compressibility factor..... 297

Nomograph aids in diagnosing compressor cylinder ills..... 298

Centrifugal Compressor Data..... **299**

Centrifugal compressor performance calculations..... 299

Nomographs for estimating compressor performance... 303

Estimate hp required to compress natural gas..... 308

Estimate compressor hp where discharge pressure is 1,000 psi..... 308

Calculate brake horsepower required to compress gas..... 309

How to find the size of a fuel gas line for a compressor station..... 309

Estimate engine cooling water requirements..... 310

Estimate fuel requirements for internal combustion engines..... 310

Estimate fuel requirements for compressor installation..... 311

11: Gas—Hydraulics, 313

Gas pipeline hydraulics calculations..... 314

Equivalent lengths for multiple lines based on Panhandle A..... 315

Determine pressure loss for a low-pressure gas system..... 316

Nomograph for determining pipe-equivalent factors 317

How much gas is contained in a given line section?.... 318

How to estimate equivalent length factors for gas lines..... 318

Estimating comparative capacities of gas pipelines..... 319

Determination of leakage from gas line using pressure drop method..... 319

A quick way to determine the size of gas gathering lines..... 320

Energy conversion data for estimating..... 320

How to estimate time required to get a shut-in test on gas transmission lines and approximate a maximum acceptable pressure loss for new lines..... 321

How to determine the relationship of capacity increase to investment increase..... 321

Estimate pipe size requirements for increasing throughput volumes of natural gas..... 322

Calculate line loss using cross-sectional areas table when testing mains with air or gas..... 323

Flow of fuel gases in pipelines..... 324

Calculate the velocity of gas in a pipeline..... 325

Determining throat pressure in a blow-down system ... 325

Estimate the amount of gas blown off through a line puncture..... 326

A practical way to calculate gas flow for pipelines..... 326

How to calculate the weight of gas in a pipeline..... 327

Estimate average pressure in gas pipeline using upstream and downstream pressures..... 327

Chart for determining viscosity of natural gas..... 328

Flow of gas..... 328

Multiphase flow..... 332

Nomograph for calculating Reynolds number for compressible flow friction factor for clean steel and wrought iron pipe..... 337

12: Liquids—General, 341

Determining the viscosity of crude..... 342

Chart gives API gravity of blends quickly..... 343

Liquid gravity and density conversion chart..... 344

Nomograph for calculating viscosities of liquid hydrocarbons at high pressure..... 344

Calculate viscosity of a blend..... 346

Calculate specific gravity of a blend..... 346

Convert viscosity units..... 346

Convert specific gravity to API gravity..... 346

Calculate bulk modulus..... 348

Nomograph for calculating viscosity of slurries..... 348

Nomograph for calculating velocity of liquids in pipes. 350

Nomograph for calculating velocity of compressible fluids in pipes..... 350

Nomograph for calculating velocity of liquids in pipes. 351

Derivation of basic ultrasonic flow equations..... 353

How fast does oil move in a pipeline?..... 355

Estimate the volume of a pipeline per linear foot using the inside diameter..... 355

What is the linefill of a given pipe in barrels per mile?..... 355

Estimate leakage amount through small holes in a pipeline..... 356

Table gives velocity heads for various pipe diameters and different rates of discharge..... 357

Viscosities of hydrocarbon liquids..... 358

13: Liquids—Hydraulics, 359

Marine Hose Data..... **360**

CALM system..... 360

SALM system..... 360

Tandem system..... 361

Multi-point mooring system..... 361

Pressure loss in hose string..... 363

Pressure drop calculations for rubber hose..... 365

Examples of pressure drop calculations for rubber hose 365

Typical formulas used for calculating pressure drop and flow rates for pipelines 365

Hydraulic gradients 367

Equivalent lengths 370

Series systems 371

Looped systems..... 372

Calculate pressure loss in annular sections 373

Calculate pressure and temperature loss for viscous crudes $\geq 1,000$ cP 373

Determine batch injection rate as per enclosure..... 376

Pressure Loss through Valves and Fittings 377

Nomograph for calculating Reynolds number for flow of liquids and friction factor for clean steel and wrought iron pipe..... 383

Nomograph for calculating pressure drop of liquids in lines for turbulent flow 385

Drag-reducing agents 389

How to estimate the rate of liquid discharge from a pipe..... 392

Predict subsurface temperature ranges 392

Sizing pipelines for water flow 393

How approximate throughput of a line can be estimated from pipe size..... 393

Gauge liquid flow where no weir or meter is available 394

Estimate crude gathering line throughput for a given pipe diameter..... 394

How to determine head loss due to friction in ordinary iron pipeline carrying clear water 394

How to size lines, estimate pressure drop, and estimate optimum station spacing for crude systems..... 395

Estimate the optimum working pressures in crude oil transmission lines 395

How to size crude oil and products lines for capacity increases..... 395

How to determine the maximum surge pressure in liquid-filled pipeline when a valve is suddenly closed..... 396

What is the hydrostatic pressure due to a column of liquid H feet in height?..... 396

Transient pressure analysis 396

Tank farm line sizing..... 406

Hydraulics calculations for multiphase systems, including networks..... 409

14: Pumps, 417

Centrifugal pumps 418

Speed torque calculation..... 430

Pulsation Control for Reciprocating Pumps 431

Rotary pumps on pipeline services 439

Key Centrifugal Pump Parameters and How They Impact Your Applications—Part 1 444

Key Centrifugal Pump Parameters and How They Impact Your Applications—Part 2 450

Estimate the discharge of a centrifugal pump at various speeds 454

How to estimate the head for an average centrifugal pump..... 455

Find the reciprocating pump capacity..... 455

How to estimate the hp required to pump at a given rate at a desired discharge pressure 455

Nomograph for determining reciprocating pump capacity 456

Nomograph for determining specific speed of pumps.. 457

Nomograph for determining horsepower requirement of pumps..... 458

How to select motors for field-gathering pumps..... 458

Reciprocating pumps..... 459

Understanding the basics of rotary screw pumps..... 468

15: Measurement, 475

Multiphase flow meter 476

Pipeline flow measurement—the new influences..... 477

Liquid measurement orifice plate flange taps..... 480

Mass measurement light hydrocarbons 484

Pipeline measurement of supercritical carbon dioxide..... 485

Gas Measurement..... 491

Master meter proving orifice meters in dense phase ethylene 491

Gas or vapor flow measurement—orifice plate flange taps 498

Properties of gas and vapors..... 502

Determine required orifice diameter for any required differential when the present orifice and differential are known in gas measurement..... 507

Estimate the temperature drop across a regulator..... 508
Estimate natural gas flow rates 508
How to estimate the average pressure differential on the remaining meter runs of a parallel system when one or more runs are shut off..... 509
Sizing a gas metering run 509
List of typical specifications for domestic and commercial natural gas..... 509
Determine the number of purges for sample cylinders..... 510
Find the British thermal units (Btu) when the specific gravity of a pipeline gas is known 510
Estimate for variations in measurement factors 510
Rules of measurement of gas by orifice meter..... 511
How to measure high pressure gas..... 511
Four ways to calculate orifice flow in field..... 515
Practical maintenance tips for positive displacement meters..... 518
Sizing headers for meter stations 522

16: Instrumentation, 525

Types of control systems..... 526

Developments in Pipeline

Instrumentation 528

Abstract..... 528
 Introduction 529
 Flow measurements..... 529
 Proving devices 531
 Valves 532
 Acoustic line break detectors..... 533
 "Smart" pressure sensors 534
 Densitometers 535
 Pipeline samplers..... 536
 Pipeline monitoring systems 537
 Computer systems 538
 SCADA systems 540
 Cathodic protection 540
 System design guidelines 540
 Future trends 541
 Conclusion..... 541

Choosing the Right Technology for

Integrated SCADA Communications .. 542

WAC methodology..... 542
 Analysis of technology 543
 C-band VSAT advantages 544
 C-band VSAT disadvantages 544
 Ku-band advantages 544

Ku-band disadvantages..... 544
VSAT decisions..... 544
Implementation 545

17: Leak Detection, 547

Pipeline leak detection techniques..... 548
 Summary 548
 Introduction..... 548
Causes and economic aspects of leaks..... 548
Simple leak detection systems..... 549
Pig-based monitoring systems..... 550
Computer-based monitoring systems 550
Pipeline leak phenomena..... 551
Background philosophy of pipeline modeling 551
Basic pipeline modeling equations 552
Impact of instrument accuracy..... 553
System design aspects and guidelines 554
Development of pipeline monitoring systems 555
 Conclusion..... 556

18: Tanks, 557

Charts give vapor loss from internal floating-roof tanks 558
 Estimating the contents of horizontal cylindrical tanks 560
 How to gauge a horizontal cylindrical tank..... 561
 Use nomograph to find tank capacity 561
 Correct the volume of light fuels from actual temperature to a base of 60°F 563
 Volume of liquid in vertical cylindrical tanks..... 563
 Chart gives tank's vapor formation rate..... 563
 Hand-held calculator program simplifies dike computations 564

19: Maintenance, 569

How to plan for oil pipeline spills (part 1) 570
Regulatory requirements 570
Contingency plan objectives..... 570
Related studies 570
Planning concepts 571
Contingency response..... 572
 How to plan for oil pipeline spills (part 2) 573
Immediate response 573
Immediate response actions 574
Flexible response actions 574

Training..... 575
Conclusion..... 576

20: Economics, 577

Rule of thumb speeds payroll estimates..... 578
 Rule of thumb estimates optimum time to keep
 construction equipment..... 579
 How to estimate construction costs 581
 Cost estimating strategies for pipelines,
 stations, and terminals (part 1)..... 584
 Cost estimating strategies for pipelines,
 stations, and terminals (part 2)..... 587
 Economics 592

**Time Value of Money: Concepts
 and Formulas 596**

Simple interest versus compound interest 596
 Nominal interest rate versus effective annual
 interest rate 597
 Present value of a single cash flow to be received
 in the future 597
 Future value of a single investment..... 598
 The importance of cash flow diagrams..... 598
 Analyzing and valuing investments/projects with
 multiple or irregular cash flows..... 598
 Perpetuities 599
 Future value of a periodic series of investments..... 600
 Annuities, loans, and leases 600
 Gradients (payouts/payments with constant
 growth rates) 601
 Analyzing complex investments and cash flow
 problems..... 602

**Decision and Evaluation Criteria for
 Investments and Financial Projects 603**

Payback method..... 603
 Accounting rate of return (ROR) method..... 604
 Internal rate of return (IRR) method..... 605
 Net present value (NPV) method 606

Sensitivity Analysis..... 607

**Decision Tree Analysis of Investments
 and Financial Projects 608**

Accounting Fundamentals..... 612

Estimate the cost of a pipeline in the United States
 (based on 1994 data)..... 616
 How to compare the cost of operating an engine
 on diesel and natural gas 617

How to estimate energy costs for different pipeline
 throughputs 617
 Comparing fuel costs for diesel and electric
 prime movers 618
 Nomograph for calculating scale-up of
 equipment or plant costs..... 618
 Nomograph for calculating scale-up of tank costs 620
 Nomograph for determining sum-of-years
 depreciation..... 621
 Nomograph for estimating interest rate of return on
 investment (“profitability index”) 621
 Nomograph for determining break-even point 623
 Chart gives unit cost per brake horsepower of
 reciprocating compressors with various types
 of prime movers..... 624
 Chart shows influence on unit cost of numbers of
 reciprocating compressor units installed in
 one station 624
 Chart gives unit cost per brake horsepower of
 centrifugal compressors with various types
 of prime movers..... 625

**21: Rehabilitation–Risk
 Evaluation, 627**

When does a pipeline need revalidation?
 The influence of defect growth rates and inspection
 criteria on an operator’s maintenance program 628
 Modeling for pipeline risk assessment..... 637

22: Conversion Factors, 645

Units of measurement convert from one system
 to another 646
 Viscosity—equivalents of absolute viscosity..... 657
 General liquid density nomograph..... 658
 Chart gives specific gravity/temperature relationship
 for petroleum oils 660
 Weight density and specific gravity of various liquids .. 660
 True vapor pressure of crude oil stocks with a Reid
 vapor pressure of 2 to 15 psi..... 661
 Low temperature vapor pressure of light
 hydrocarbons 662
 High temperature vapor pressure of light
 hydrocarbons 663
 Hydrocarbon gas viscosity..... 664
 Metric conversions—metric to English, English to
 metric..... 665
 Temperature conversion—centigrade to Fahrenheit or
 Fahrenheit to centigrade..... 666

Viscosity—equivalents of kinematic viscosity 667
Viscosity—equivalents of kinematic and Saybolt
 Universal Viscosity 667
Viscosity—equivalents of kinematic and Saybolt
 Furol Viscosity at 122° F 668
Viscosity—general conversions 669
A.S.T.M. standard viscosity temperature chart 670
Pressure conversion chart 671
A simple method to determine square root 671
SI data 672
Energy conversion chart 673
Flow conversion chart 673
Conversions involving different types of fuel 674
Conversion factors for Calorific values of gases under
 different conditions of measurement 676

Heat value conversions and natural gas equivalents
 of various fuel units 677
 Conversion for daily/annual rates of energy
 consumption (gross heat basis) 678
 Weight of water per cubic foot at various
 temperatures 679
 Engineering constants 679
 Mensuration units 680
 Minutes to decimal hours conversion table 681
 How to compare costs of gas and alternate
 fuels 681
 Typical characteristics of fuel oils 682

Index, 683
