The Journal of AOAC INTERNATIONAL publishes refereed papers and reviews in the fields of chemical, biological and to analytical chemistry for the purpose of showcasing the most precise, accurate and sensitive methods for analysis of food additives, supplements and contaminants, cosmetics, drugs, toxins, hazardous substances, pesticides, feeds, fertilizers and environment available at that point in time. The scope of the Journal includes unpublished original research describing r analytical methods, techniques and applications; improved approaches to sampling, both in the field and the laboratory; methods of preparing samples for analysis; collaborative studies substantiating the performance of a given method; st analytical techniques for evaluating data. The Journal will also publish other articles of general interest to its audience, e.g., techn communications; cautionary notes; comments on techniques, apparatus, and reagents.
