

CONTENTS

Chapter 1. Measuring the Variability of A Statistical Series	1
Chapter 2. Judging the Reliability of statistical Results	14
Chapter 3. The Relation Between two Variables, and the Idea of Function	34
Chapter 4. Determining the way one Variable Changes when another Changes: By the Use of- Average	47
Chapter 5. Determining the way one variable changes with another: According to the Straight-line – Function	59
Chapter 6. Determining the Way One Variable Changes When Another Changes: For Curvilinear – Function	75
Chapter 7. Measuring Accuracy of Estimate and Degree of Correlation	128
Chapter 8. Practical methods for working Two-Variable Correlation Problems	146
Chapter 9. Three Measures of Correlation: The Meaning and Use for Each	159
Chapter 10. Determining the way one variable changes when two of more variables change: By – Successive Elimination	163
Chapter 11. Determining the Way on variable Changes when two or more other variables change: By – Cross-Classification and Averages	181
Chapter 12. Determining the way one Variable changes when two or more other Variables change: By- Using a Linear Regression Equation	190
Chapter 13. Measuring Accuracy of Estimate and Degree of Correlation for Linear Multiple- Correlation	208
Chapter 14. Determining the way one Variable Changes When two or More Other Variables Change: - Using Curvilinear Regressions	220
Chapter 15. Measuring Accuracy of Estimate and Degree of correlation for Curvilinear Multiple- Correlation	259
Chapter 16. Short-cut Methods of Determining Net Regression Lines and Curves	268
Chapter 17. Measuring the Way a Dependent Variable Changes With Changes in A Non-Quantitative – Independent Factor	302
Chapter 18. Determining the Reliability of Correlation Conclusions	312
Chapter 19. The Reliability of an Individual Forecast and of Timeseries Analyses	341
Chapter 20. Influence of Selection of Sample and Accuracy of Observations on Correlation- Results	359
Chapter 21. Measuring the Relation Between one Variable and two or More Others Operating – Jointly	372
Chapter 22. Supplementary Methods for determining curvilinear and Joint Relations	396
Chapter 23. Types of Problems to Which Correlation analysis Has been Applied	415

Chapter 24. Steps in Research Work, and The Place of Statistical Analysis	442
Appendix	455
Index	523
