Preface xi
List of figures xv
List of tables xix
Glossary of terms and acronyms xxi
Glossary of mathematical and statistical symbols xxiii

SECTION A Most Suitable Environment 1

1. Introduction 3
1.1 The process of finding new lead medicines 4
1.2 A drug discovery framework 6

2. Technology transfer and the climate of change 11
2.1 Innovation and research 11
2.2 Method transfer 14

3. Quality systems structure and a maximum quality environment 15
3.1 The quality gurus and models for assurance 18
3.2 A cycle of continual improvement 22
3.3 Management structure and a functioning department 22

SECTION B Setting Process Bounderies 29

4. Validation 31
4.1 Process and manufacturing validation activities 35
4.2 Valid analytical methodologies (VAMs) 43

5. Good manufacturing practices **57**
5.1 Manufacture of standard products 60
5.2 Manufacture of materials requiring specialised production facilities 75
5.3 Quality assurance aspects of medical gases, devices and miscellaneous product manufacture 88

6. Process control via numerical means **97**
6.1 Charting and quality inspection 99
6.2 Sampling plans 104
6.3 Measures of process compliance and variation 108

7. Product verification and the role of qualified personnel **111**
7.1 Batch documentation 113
7.2 Standard operating procedures 114
7.3 Guides, overviews and validation plans 115
7.4 The duties of the qualified person 116

8. In-process and on-process QC testing and control **119**
8.1 Process analytical technologies 120
8.2 Analytical validation and clinical test validation (CTV) 121
8.3 LIMS and automation 126

SECTION C Starting from Scratch **131**

9. Applications of QA to new medicinal products and new chemical entities formulation **133**
9.1 Start-up and initialisation 134
9.2 Raw materials control 134
9.3 The validation life cycle 134
9.4 Top-down or bottom-up validations 135

10. New products manufacturing **137**
10.1 From inception to market place 139
10.2 New product development: product design and specification 146

11. Questions and problems **151**

11.1 Specimen examples and exam questions 151

11.2 Model answers to examples 162

References **169**

Index **177**
