

CONTENTS

1. A Historical Perspective on Cotton Dust in the United States Textile Industry	3
2. Technology for Pre-Textile Cotton Cleaning	11
3. Dust in Cotton Gins: An Overview	27
4. Washing Methods for Cotton: Effects on Fiber, Processing Qualities, and Dust Generation	37
5. Measurement of Dust-Release Potential of Cotton	53
6. Cotton Trash and Dust Contents and Airborne Dust Concentration: Feasibility of Predicting- by Nondestructive light Reflectance	67
7. A Standardized Method for Vertical Elutriator Cotton Dust Sampling	85
8. Procedures for the Determination of Humidifier Contributions to Respirable Dust Levels in- the Workplace	105
9. Real Time Measurement of Particle Size Distribution of Airborne Cotton Dust by Light – Scattering	123
10. Mechanisms in Byssinosis: A Review	145
11. Etiologic Agents and Pathogenic Mechanisms in the Acute Byssinotic Reaction	163
12. Cotton Bract and Acute Airway Constriction in Humans	187
13. Cotton Dust Exposure and Chronic Respiratory Impairment: An Epidemiological – controversy	203
14. Some Possible Relations of Fungi in Cotton Fiber to Byssinosis	213
15. The Relation of Microorganisms and Microbial Products to Cotton	225
16. Botanical Trash and Gram-Negative Bacterial Contents of Materials Utilized by the Cotton- Industry	245
17. Analysis of Antigens in Cotton Dust by Immunological Methods	259
18. Secondary Metabolites of Gossypium: A Biogenetic Analysis	275
19. Histamine in Cotton Plant and Dust Determined by High Performance Liquid – Chromatography	301
20. Analyses of the Inorganic Content of Cotton Dust: A Review	313
Index	335
