vii	Acknowledgements
viii	Meeting participants
xii	Declaration of interests
xiii	Abbreviations and acronyms
xv	Working definitions
xvii	Executive summary
xvii	<i>Background</i>
xviii	<i>Use of nanotechnology</i>
xix	<i>Assessment of human health risks</i>
xx	<i>Stakeholder confidence and dialogue</i>
3	Introduction
3	Background
3	Market drivers and scale of commercial activity
5	Meeting background
6	Scope and objectives
6	<i>Scope</i>
6	<i>Objectives</i>
7	Expected outputs
8	Existing and projected applications of nanotechnology in the food and agriculture sectors
8	Scope and objectives
9	Introduction
10	Processed nanostructures in food
11	Nanodelivery systems based on encapsulation technology
12	Nanomaterials relevant to food applications
13	<i>Inorganic nanomaterials</i>
14	<i>Surface functionalized nanomaterials</i>
14	<i>Organic nanomaterials</i>

15	Nano-enabled food contact materials (FCMs) and packaging
15	<i>Nanoparticle reinforced materials</i>
17	<i>Intelligent packaging concepts based on nanosensors</i>
18	Use of nanotechnologies in the agriculture sector
18	<i>Animal feed</i>
18	<i>Agrochemicals</i>
19	Future perspectives
19	<i>Introduction</i>
20	<i>Carbon nanotube–polymer composites</i>
20	<i>Polymer nanocomposite films</i>
21	<i>Polymer composites with nano-encapsulated substances</i>
21	<i>Dirt repellent coatings at nanoscale</i>
21	<i>Nanomaterials for next generation packaging displays</i>
21	<i>Improvement of the performance of biobased polymers</i>
22	Summary
24	Assessment of human health risks associated with the use of nanotechnologies and nanomaterials in the food and agriculture sectors
24	Introduction
25	Problem identification
26	Risk assessment: Hazard identification
27	<i>Techniques characterizing physicochemical properties</i>
28	<i>Interaction of nanomaterials with biology</i>
30	<i>Toxicological effects</i>
31	<i>In vitro and in vivo testing</i>
33	Hazard characterization
33	<i>Dose–response considerations</i>
34	<i>Species differences in toxicokinetics and toxicodynamics specific to nanoparticles</i>
34	<i>Epidemiological studies</i>
34	<i>Exposure assessment</i>
37	Risk characterization
37	Applicability of the risk assessment paradigm for nanoparticles
37	<i>Special tools or approaches required for nanoparticle risk assessment</i>
37	<i>Consideration of a tiered risk assessment approach</i>
38	<i>Product life cycle considerations</i>
39	<i>Animal health considerations including food of animal origin and residues in animal tissues</i>

40	Future needs for the assessment and prevention of human and animal health risks
40	<i>Databases</i>
40	<i>Exposure assessment</i>
40	<i>Hazard identification and characterization</i>
41	Summary
41	<i>Knowledge needs</i>
41	<i>Resource needs</i>
42	<i>Process needs</i>
43	Development of transparent and constructive dialogues among stakeholders – Stakeholder confidence
43	Stakeholder engagement
43	Risk communication in risk analysis frameworks
47	Models of Engaging Stakeholders
48	Upstream input into research strategy and prioritization of R&D funding/risk assessment
49	Transparency
50	<i>Interest and concerns of unaffiliated public citizens</i>
50	Consumer perception studies
53	Stakeholder organizations
54	<i>Environmental and consumer NGOs</i>
55	<i>Analysis of the key issues</i>
56	<i>Industries</i>
56	<i>Governments</i>
57	<i>Science, science policy, think tanks, and professional organizations</i>
58	Relevant theories of risk perception
58	<i>Cultural Theory</i>
60	<i>Psychometric paradigm</i>
60	<i>Social amplification of risk</i>
61	Good communication
61	<i>Effective communication and dialogue among all stakeholders</i>
62	<i>Effective dialogue with the media</i>
64	Summary and conclusions
66	Recommendations
66	Nanotechnology applications
66	Risk assessment
68	Stakeholder confidence

Appendices

- 87 Appendix 1. Core Group meeting outcome note
- 92 Appendix 2. Call for experts and information
- 97 Appendix 3. Briefing note for participants
- 99 Appendix 4. List of current and projected nanotechnology applications in the food and agriculture sectors
- 103 Appendix 5. Case studies and illustrative examples
- 103 *Case Study 1. β -cyclodextrin as a nanocarrier*
- 104 *Case Study 2. Zinc oxide as an antimicrobial in food contact material (hypothetical)*
- 106 Appendix 6. Nanotechnology dialogues
- 109 Appendix 7. Topics and processes for nanotechnology dialogues
