

CONTENTS

**Part I. General and Basic Techniques**

1. Rapid Methods and Automation in Food Microbiology: An Update	3
2. Basic Principles of Industrial Microbiological Testing and Uses of its Findings	23
3. Sample Removal, Transport, and Preparation	35
4. Rapid Methods of Enumerating Microorganisms	47
5. Evaluation of Microflora by Nonmicrobiological Techniques	73
6. Identification	97
7. Microbiological Applications of Immunology	109
8. Identification of Microorganisms by Nucleic Acid Probe Hybridization	119
9. Mechanization and Automation of Techniques	139
10. Prediction of Product Life Span	151

**Part II. Methods of Evaluation of Various Technologically Significant Microflora**

11. Total Aerobic Mesophilic Microflora	175
12. Psychrotrophic Microflora	181
13. The Lactic Microflora	189
14. Bacteriophages of Lactic Starters: Detection and Enumeration	227
15. The Yeasts	249
16. The Molds	277

**Part III. Evaluation Methods for Microflora of Sanitary Incidence**

17. Indicators of Fecal Contamination	293
18. The Genus Salmonella	309
19. The Genus Campylobacter	325
20. The Genus Yersinia	335
21. The Genus Clostridium and the Sulfite-Reducing Anaerobes	347
22. Coagulase-Positive Staphylococci	361
23. The Genus Listeria	373

**Part IV. Microbiological Testing of Starting Materials and Finished Products**

24. Water	385
25. Milk and Dairy Products	395
26. Beer and Soft Beverages	415
27. Meat and Meat Products	421
28. Eggs and Egg Products	431
29. Fisheries Products: Fish, Crustaceans, and Shellfish	437
30. Vegetable Products	445
31. Prepared Meals	455
32. Preserves and Semipreserves	461

33. Testing of Intermediate Moisture Foods	469
<b>Part V. Miscellaneous Applications of Microbiological Testing</b>	
34. Testing of Starter Cultures for Purity	497
35. Microbiological Monitoring of Factory Equipment, Atmosphere, and Personnel	515
<b>Index</b>	<b>531</b>
