<b>PART ONE FOOD SAFETY CHALLENGES IN THE 21<sup>ST</sup> CENTURY</b>	<b>1</b>
<b>1 Origin and evolution of the modern system of food safety management: HACCP and prerequisite programmes</b>	<b>3</b>
1.1 Historical perspectives	3
1.2 Origin and evolution of HACCP	5
1.3 The necessity of prerequisite programmes	10
1.4 The future of HACCP	10
<b>2 Lessons learned from food safety successes and failures</b>	<b>12</b>
2.1 Introduction	12
2.2 Benefits of using HACCP – lessons learned from successful implementation	12
2.3 Misconceptions or ‘failure to understand HACCP’	14
2.4 Barriers to effective HACCP use	20
2.5 Reasons for failure	21
2.5.1 Lessons learned from major food safety events	21
2.5.2 Commonly observed mistakes in the <i>implementation</i> of HACCP and management of food safety programmes	22
2.6 Difficulties with applying HACCP through the entire food supply chain	24
2.7 Roles and responsibilities – lessons learned	26
2.7.1 Industry	26
2.7.2 Government	27
2.7.3 Retailers/food service establishments	27
2.7.4 Trade and professional associations	27
2.7.5 Consumers	28
2.7.6 Academia	28
2.7.7 The media	28
2.7.8 Advocacy and pressure groups	28
2.8 Conclusions	28

<b>3</b>	<b>Food safety challenges in the global supply chain</b>	<b>30</b>	
3.1	Introduction	30	
3.2	Increased complexity of the global supply chain	32	
3.2.1	Economic factors	32	
3.2.2	Environmental factors	33	
3.2.3	Social factors	36	
3.3	Food safety issues in global trade	37	
3.3.1	Lack of uniformity in regulations and requirements	39	
3.3.2	Lack of uniformity in audit requirements	41	
3.4	Strategic-level responses	41	
3.4.1	Government communications systems	41	
3.4.2	Global food safety audit standards	42	
3.4.3	Auditor competency	43	
3.4.4	Public–private partnerships	43	
3.5	Tactical level responses	43	
3.5.1	Supplier audits and approvals	44	
3.5.2	Shared audits and approved supplier lists (with other companies)	45	
3.5.3	Business continuity planning	45	
3.5.4	Sharing technology	46	
3.6	Conclusions	46	
<b>4</b>	<b>The future of food safety and HACCP in a changing world</b>	<b>48</b>	
4.1	Introduction	48	
4.2	Food safety issues	49	
4.2.1	Emerging pathogens	49	
4.2.2	Changes in distribution of pathogens	49	
4.2.3	Additional control measures	49	
4.2.4	Antibiotic-resistant pathogens	50	
4.2.5	Allergens	50	
4.2.6	Other chemical hazards	50	
4.2.7	Physical hazards	50	
4.3	Technology advancements	50	
4.4	Food safety management	51	
4.4.1	HACCP preliminary steps and principles	51	
4.4.2	Additions to current prerequisite programmes (Codex principles of food hygiene)	52	
4.4.3	Global food safety assurance	53	
4.5	Changes in thinking/policy making	59	
4.5.1	Food safety objectives	59	
4.5.2	End product testing	60	
4.5.3	Hazard analysis versus risk assessment	60	
4.6	Conclusions	61	
	<b>PART TWO</b>	<b>FOODBORNE HAZARDS AND THEIR CONTROL</b>	<b>63</b>
<b>5</b>	<b>Recognising food safety hazards</b>	<b>65</b>	
5.1	Introduction	65	

---

5.1.1	What is a food safety hazard?	65
5.1.2	What is not a food safety hazard?	65
5.2	<b>Biological hazards</b>	66
5.2.1	Epidemiology and morbidity statistics	66
5.2.2	Characteristics of foodborne illnesses	69
5.2.3	Bacterial pathogens – special considerations and features	73
5.2.4	Viral pathogens	75
5.2.5	Prions	76
5.2.6	Protozoan parasites	77
5.2.7	Parasitic worms	78
5.3	<b>Chemical hazards</b>	78
5.3.1	Allergens	78
5.3.2	Mycotoxins	79
5.3.3	Marine foodborne toxins	80
5.3.4	Genetically modified foods	81
5.3.5	Antibiotics	81
5.3.6	Persistent organic pollutants	82
5.3.7	Heavy metals	83
5.3.8	Chemicals used in food processing environments	84
5.3.9	Chemicals used in food packaging materials	84
5.3.10	Unanticipated potential chemical hazards	84
5.4	<b>Physical hazards</b>	85
5.4.1	Sources of foreign material	85
5.4.2	Injuries associated with physical hazards	85
5.5	<b>Conclusions</b>	86
<b>6</b>	<b>Designing safety into a food product</b>	<b>87</b>
6.1	Introduction	87
6.2	Formulation intrinsic control factors	87
6.2.1	Water activity	88
6.2.2	pH	90
6.2.3	Chemical food preservatives	90
6.2.4	Oxidation–reduction potential	94
6.2.5	Interactions between preservative factors	95
6.3	Use of experimental design and analysis	97
6.3.1	Challenge testing	97
6.3.2	Accelerated shelf life testing	100
6.3.3	Predictive microbiology and mathematical modelling	101
6.3.4	Theory versus reality	101
6.4	Ingredient considerations	102
6.4.1	High-risk ingredients	102
6.5	<b>Conclusions</b>	104
<b>7</b>	<b>Designing a safe food process</b>	<b>105</b>
7.1	Introduction	105
7.2	Process control of microbiological hazards	106
7.2.1	Destruction of microorganisms	106
7.2.2	Prevention of microbial growth	112

7.2.3	Prevention of contamination	114
7.3	Process control of chemical hazards	117
7.3.1	Allergen control	117
7.3.2	White powder control	118
7.3.3	Cleaning, sanitation and maintenance chemicals	119
7.4	Process control of physical hazards	119
7.4.1	Exclusion techniques	119
7.4.2	Removal techniques	120
7.4.3	Detection techniques	121
7.5	Conclusion	122
<b>PART THREE SYSTEMATIC FOOD SAFETY MANAGEMENT</b>		<b>123</b>
<b>8</b>	<b>Overview of a world-class food safety programme</b>	<b>125</b>
8.1	Introduction	125
8.2	Preliminary concepts and definitions	126
8.2.1	What is a world-class food safety programme?	126
8.2.2	World-class food safety programmes – fundamental elements	127
8.2.3	World-class food safety programmes – essential management practices	129
8.2.4	World-class food safety programmes – further supporting elements	129
8.3	World-class food safety programmes in the global food supply chain	130
8.4	Continuous improvement of the world-class food safety programme	131
8.5	Conclusions	132
<b>9</b>	<b>Building the foundations of a world-class food safety management programme: essential steps and practices</b>	<b>133</b>
9.1	Introduction	133
9.2	Essential management practices	135
9.2.1	Management commitment	135
9.2.2	Assignment of roles and responsibilities	136
9.2.3	Training and education	136
9.2.4	Resource management	139
9.2.5	Documentation	142
9.2.6	Supplier–customer partnerships	142
9.2.7	Continuous improvement	143
9.3	Preparation activities for food safety programmes	143
9.3.1	Preparing a project plan	143
9.3.2	Structure the HACCP programme	144
9.3.3	Carry out a gap assessment	144
9.4	Prioritisation of corrective actions	150
9.5	Conclusions	152
<b>10</b>	<b>Formalised prerequisite programmes in practice</b>	<b>154</b>
10.1	Introduction	154
10.2	Prerequisite definitions and standards	154

10.3	Prerequisite programmes – the essentials	155
10.3.1	Primary production	156
10.3.2	Establishment: design and facilities	157
10.3.3	Control of operation	158
10.3.4	Establishment: maintenance and sanitation	161
10.3.5	Establishment: personal hygiene	169
10.3.6	Transportation	170
10.3.7	Product information and consumer awareness	170
10.3.8	Training	172
10.4	Prerequisite programmes and operational prerequisites	173
10.5	Validation and verification of prerequisite programmes	175
10.6	Conclusions	175
<b>11</b>	<b>Conducting a product safety assessment</b>	<b>176</b>
11.1	Introduction	176
11.1.1	Who is involved in product safety assessments?	176
11.1.2	Timing of the product safety assessment process	177
11.1.3	Product safety assessment process	178
11.1.4	Previous approaches	178
11.2	Training for research and development personnel	179
11.3	Example of a product safety assessment	179
11.3.1	Process flow diagram	181
11.4	Conclusions	184
<b>12</b>	<b>Developing a HACCP plan</b>	<b>185</b>
12.1	Introduction	185
12.2	Preliminary concepts	186
12.2.1	HACCP principles	186
12.2.2	The HACCP plan and documentation approaches	186
12.2.3	HACCP application process	187
12.2.4	Codex logic sequence	187
12.3	Applying the codex logic sequence to develop a HACCP plan	189
12.3.1	HACCP study terms of reference and scope	189
12.3.2	Codex logic sequence step 1: HACCP teams	190
12.3.3	Codex logic sequence step 2: product/process descriptions	191
12.3.4	Codex logic sequence step 3: identify intended use	192
12.3.5	Codex logic sequence step 4: construct process flow diagram	193
12.3.6	Codex logic sequence step 5: on-site confirmation of flow diagram	198
12.3.7	Codex logic sequence step 6: list all potential hazards, conduct a hazard analysis and consider control measures (apply HACCP principle 1)	199
12.3.8	Codex logic sequence step 7: determine CCPs (HACCP principle 2)	206
12.3.9	Codex logic sequence step 8: establish critical limits for each CCP (HACCP principle 3)	209

12.3.10	Codex logic sequence step 9: establish a monitoring system for each CCP (HACCP principle 4)	209
12.3.11	Codex logic sequence step 10: establish corrective actions (HACCP principle 5)	213
12.3.12	Codex logic sequence step 11: establish verification procedures (HACCP principle 6)	213
12.3.13	Codex logic sequence step 12: establish documentation and record-keeping (HACCP principle 7)	215
12.4	Conclusions	215
<b>13</b>	<b>Implementing a HACCP system</b>	<b>216</b>
13.1	Introduction	216
13.2	Activities for implementation of a HACCP plan	217
13.2.1	The validated HACCP plan	217
13.2.2	Implementation action planning	217
13.2.3	Training	220
13.2.4	CCP management systems	221
13.2.5	HACCP-required activities	221
13.2.6	Verification of implementation	222
13.2.7	Handover to operations staff	222
13.3	Considerations for implementing updates and changes to an existing HACCP system	223
13.4	Conclusions	223
<b>14</b>	<b>Maintaining a food safety programme</b>	<b>224</b>
14.1	Introduction	224
14.2	What is food safety programme maintenance?	224
14.3	Responsibility for food safety programme maintenance	225
14.4	Maintenance of prerequisite programme elements	226
14.5	Maintenance of HACCP system elements	226
14.5.1	HACCP verification activities	226
14.5.2	HACCP maintenance activities	227
14.6	Use of audit for successful food safety system maintenance	228
14.6.1	Audit definitions	229
14.6.2	The auditor and audit skills	230
14.6.3	Audit checklists	231
14.6.4	Use of external audit and certification schemes as part of food safety programme maintenance	232
14.7	Incident Management	233
14.8	Conclusions	233
