

CONTENTS

Section I The Introduction

1. Waste Management Trends: Introductory Vignette's 3

Section II The Overview

2. Overview of Waste Management and Environmental Restoration Programs at the Oak Ridge-Complex 11
3. Multimedia Environmental and Biological Surveillance at the U.S. Department of Energy's-Hanford Site, Southeastern Washington 21
4. Problems with the Use of Developing Technologies at Hazardous Waste Sites 35
5. Effective and Safe Waste Management-A Regulator's Perspective 41
6. Public Interface and Waste Management Planning: An Approach for Integrating Community – Involvement in Waste Strategies 49

Section III The Method

7. Structuring a Cost-Effective Site Characterization 59
8. Remedial Investigation of a Superfund Site 67
9. Developing Air Monitoring Plans for Hazardous Waste Disposal Facilities 83
10. How Does One Develop the “Right” Quality assurance Program for Waste Management – Projects? 95
11. Decision-Making Methodology for Management of Hazardous Waste 107
12. Use of Pathways Analysis as a Tool for Effective and Safe Waste Management 115

Section IV The Application

13. Waste Confinement Systems and Waste Form Durability 125
14. Interpretation of Leaching Data for Cementitious Waste Forms Using Analytical Solutions-Based on Mass Transport Theory and Empiricism 143
15. The Development of Technologies for the Long-Term Containment of Low-Level Radioactive – and Hazardous Wastes into Geologic Formations 163

Section V The Monitoring

16. Misuse of Analytical Screening Tests in Environmental Investigations 175
17. Methods for Sampling and Analyzing Vapor-Phase Muteness and Other Volatile Toxicants-from Waste Sites 183
18. Integrating Environmental Toxicology and Monitoring in the Development and Maintenance – of Water Quality Program: California's Herbicide Scenario 211

Section VI The Toxicology

19. Computerization of Toxicological Data by Government Agencies, Chemical and Information-Industries 227

20. Toxicological Evaluations of Hazardous Effluents and Emissions Using Genetic Bioassays	265
--	-----

Section VII The Risk

21. Risk Management at Hazardous Waste Sites	283
22. Health Risk Assessment of Toxic Wastes	293
23. Comparison of Modeling and Expert Systems Approaches to Exposure Assessment	315
24. Using Risk Assessment in Remedy Selection	327
25. Use of a Monte Carlo Modeling Approach for Evaluating Risk and Environmental- Compliance	337
26. Toward the Development of a Biologically Sound Philosophy for Ecological Risk- Assessment	349
