CONTENTS

Preface ix

1 Introduction

- 1.1 Nature of Problem 1
- 1.2 Waste Load Allocation Principles 4
- 1.3 Nature of Inputs 9
- 1.4 Point Source Mass Loading Rates 10
- 1.5 Tributary Mass Loading Rates 14
- 1.6 Intermittent Mass Loading Rates 17
- Comparison of Continuous and Intermittent Waste Sources 21 References 25 Problems 26

2 Rivers and Streams

- 2.1 River Hydrology and Flow 30
- 2.2 Discharge of Residual Material into Rivers 49
- 2.3 Time Variable Analysis 69
- 2.4 Engineering Controls 78
- 2.5 Derivation of Steady-State Stream Equation 81 References 82 Problems 84

3 Estuaries, Bays, and Harbors

- 3.1 Physical Aspects of Estuaries: Estuarine Hydrology Tides, and Tidal Currents 92
- 3.2 Distribution of Water Quality in Estuaries 103
- 3.3 Estimation of Tidal Dispersion Coefficient 114
- 3.4 Slack Tide Sampling 119
- 3.5 Derivation of Estuary Equation 121
- 3.6 Modeling "Real" Estuaries—Finite Segment (Finite Differences) 123
- 3.7 Positivity and Numerical Dispersion of Steady State Finite Segment Models 151
- 3.8 Time Variable Aspects of Estuaries 159 References 165 Problems 167

4 Lakes

- 4.1 Physical and Hydrologic Characteristics 174
- 4.2 Lakewide Water Quality Response to Inputs 180
- 4.3 Finite Segment (Finite Difference) Steady State Lake Models 199
 References 213
 Problems 215

5 Indicator Bacteria, Pathogens, and Viruses

5.1 Introduction 219

5.2 Inputs of Organisms 226

- 5.3 Organism Decay Rate 231
- 5.4 Fate of Organisms 239
- 5.5 Environmental Controls 250 References 254 Problems 258

6 Dissolved Oxygen

- 6.1 Introduction 261
- 6.2 Principal Components of DO Analysis 262
- 6.3 Sources and Sinks of DO-Kinetic Relationships 266
- 6.4 Dissolved Oxygen Analysis—Streams and Rivers 301
- 6.5 Dissolved Oxygen Analysis—Tidal Rivers and Estuaries 327
- 6.6 Dissolved Oxygen Analysis—Lakes and Reservoirs 340
- 6.7 Finite Segment (Difference) DO Models 345
- 6.8 Engineering Control for Dissolved Oxygen 354 References 375 Problems 379

7 Eutrophication

- 7.1 Introduction 385
- 7.2 Basic Mechanisms of Eutrophication 388
- 7.3 External Sources of Nutrients 391
- 7.4 Significance of the N/p Ratio 398
- 7.5 Simplified Lake Phytoplankton Models 403
- 7.6 Phytoplankton and Nutrient Interactions 416
- 7.7 Phytoplankton-DO Relationships 434
- 7.8 Simplified River and Stream Eutrophication Analysis— Phytoplankton 437
- 7.9 Simplified River and Stream Eutrophication Analysis— Periphyton and Rooted Aquatic Plants 449
- 7.10 Finite Segment Models 460
- 7.11 Eutrophication Control Techniques 477 References 485 Problems 489

CONTENTS

8 Toxic Substances

- 8.1 Introduction 495
- 8.2 Chemical Water Quality Criteria and Standards 498
- 8.3 Principal Physio-Chemical Components of Toxic Substances Analysis 503
- 8.4 Completely Mixed Lakes 516
- 8.5 Rivers and Streams 522
- 8.6 Estuaries 527
- 8.7 Multidimensional Waterbodies 528
- 8.8 Estimation of Net Chemical Loss Rate 530
- 8.9 Principal Biological Components of Toxic Substance Analysis 549
- 8.10 Finite Difference Applications 576
- 8.11 Control of Toxic Substances 588 References 591 Problems 595

9 Temperature

- 9.1 Significance of Water Temperature 599
- 9.2 Excess Heat Inputs 600
- 9.3 Heat Balance—Sources and Sinks 602
- 9.4 Simplified Heat Balance Equation 606
- 9.5 Temperature Models 608
- 9.6 Reduction of Excess Heat Inputs 616 References 620 Problems 621
- Appendix A. Nomenclature 625
- Appendix B. Conversion Factors 631
- Appendix C. Solubility of Oxygen in Water Exposed to Water-Saturated Air at Atmospheric Pressure 635
- Index 637

599
