

CONTENTS

1. Introduction	1
2. Lead in the atmosphere	7
2.1 Introduction	7
2.2 Sources of lead in air	7
2.3 Concentrations of lead in ambient air	10
2.4 Particle size distributions	27
2.5 Chemical properties of atmospheric lead	29
3. Lead in water	33
3.1 Introduction	33
3.2 Sources of lead in surface waters	33
3.3 Concentrations of lead in water	39
3.4 Chemistry of lead in water	46
4. Lead in soils	55
4.1 Introduction	55
4.2 Sources of lead in soil	55
4.3 Concentrations of lead in soil	60
4.4 Uptake of soil lead by living organisms	60
4.5 Chemistry of lead in soil	63
4.6 Lead in street dusts	66
5. Control of lead in air	70
5.1 Industrial sources of lead	70
5.2 Control of industrial emissions of lead	82
5.3 Legislative regulations affecting industrial lead emissions	94
5.4 Control of lead emissions from motor vehicles	94
5.5 Ambient air quality standard for lead	96
5.6 Control of lead within the workplace	99
6. Control of lead discharges to water	104
6.1 Introduction	104
6.2 Water quality criteria and standards	105
6.3 Uniform emission standards versus water quality objectives	109
6.4 Control practices for lead discharges	111
7. Human exposure to lead and its effects	133
7.1 Introduction	133

7.2 Sources and intake of lead	133
7.3 Uptake of lead	141
7.4 Metabolism of lead	144
7.5 Blood leads	147
7.6 Biological and adverse health effects of exposure to lead	153
8. Chemical analysis of lead in the environment	159
8.1 Introduction	159
8.2 Chemical analysis of lead: available techniques	159
8.3 Sampling and analysis of environmental media	161
8.4 Contamination during lead analysis	163
References	164
