

CONTENTS

PART I HUMANS AND NATURE: AN OVERVIEW

1. Environmental Problems and Their Causes	4
1-1 Living Sustainable	5
1-2 Growth and the Wealth Gap	7
1-3 Resources	11
1-4 Pollution	16
1-5 Environmental and Resource Problems: Causes and Connections	20
1-6 Is Our Present Course Sustainable?	22
2. A Brief History of Resource Use and Conservation	32
2-1 Cultural Change: an Overview	33
2-2 Hunting-and-Gathering Societies	34
2-3 Agricultural Societies	34
2-4 Industrial Societies: The Industrial Revolution	37
2-5 Resource Conservation and Public health in the United States, 1400-1960	38
2-6 The Environmental Movement in the United States, 1960-96	42
2-7 A New Environmental or Sustainability Revolution	45

PART II SCIENTIFIC PRINCIPLES AND CONCEPTS

3. Critical Thinking: Science, Models, and Systems	50
3-1 Science, Technology, and Environmental Science	51
3-2 Systems and System Models	56
3-3 Some Basic Components and Behaviors of System Models	59
3.4 Some Behaviors of Complex Systems	62
4. Matter and Energy Resources: Types and Concepts	68
4-1 Matter: Forms, Structure, and Quality	69
4-2 Energy: Forms and Quality	77
4-3 Physical and Chemical Changes and the Law of Conservation of Matter	78
4-4 Nuclear Changes	
4-5 The Two Ironclad Laws of Energy	83
4-6 Connections: Matter and Energy Laws and Environmental Problems	85
5. Ecosystems and How They Work: Connections in Nature	90
5-1 Life and Earth's Life-Support Systems	91
5-2 Ecosystem Components	95
5-3 Energy Flow in Ecosystems	105
5-4 Matter Cycling in Ecosystems	113

5-5 How Do Ecologists Learn About Ecosystems?	123
5-6 Sustainability and Ecosystem Services	125
6. Ecosystems: Niches, Species Interactions, Succession, and Stability	128
6-1 Roles of species in Ecosystems	129
6-2 Some General Types of Species	131
6-3 Species Interactions: Competition and Predation	134
6-4 Symbiotic Species Interactions: Parasitism, Mutualism, and Commensalism	140
6-5 Ecosystem Structure and Ecological Succession	144
6-6 Biodiversity and Ecosystem Stability	151
7. Climate, Weather and Biodiversity	156
7-1 Weather and Climate: A Brief Introduction	157
7-2 Biomes: Climate and Plant Life on Land	165
7-3 Desert Biomes	168
7-4 Grassland and Chaparral Biomes	172
7-5 Forest Biomes	177
7-6 Mountain Biomes	183
7-7 Limiting Factors in Aquatic Environments	185
7-8 Saltwater Environments	186
7-9 Freshwater Environments	196
8. Population Dynamics, Evolution, and human Impacts	202
8-1 Characteristics of Populations	203
8-2 Population Responses to Stress: Population Dynamics	205
8-3 Reproductive Strategies and Survival	209
8-4 Major Types of Life on Earth: Cataloging Life's Diversity	211
8-5 The Emergence of life on the Earth	214
8-6 Evolution, Adaptation, and Natural Selection in Populations	218
8-7 Speciation, Lineages, Extinction, and Biodiversity	222
8-8 Human Impacts on Ecosystems: Learning from Nature	227
8-9 Solutions: Working with Nature to Help Ecosystems Heal	229
9. Geologic Processes: The Dynamic Earth	234
9-1 Earth Structure and Composition	235
9-2 Internal and External Earth processes	237
9-3 Mineral Resources and the Rock Cycle	242
9-4 Locating and Extracting Crustal Resources	245
9-5 Natural Hazards	249
9-6 Geologic and Other Time Frames	256
10. Risk, Toxicology, and Human Health	258
10-1 Risks and Hazards	259
10-2 Toxicology	260
10-3 Chemical Hazards	263

10-4 Radiation: A Physical Hazard	266
10-5 Biological Hazards: Disease in Developed and Developing Countries	268
10-6 Risk Analysis	275
PART III THE HUMAN POPULATION	
11. Population Dynamics: Influencing Population Size	284
11-1 Factors Affecting Human Population Size	285
11-2 Population Age Structure	294
11-3 Solutions: Influencing Population Size	297
11-4 Case Studies: Slowing Population Growth in India and China	307
11-5 Cutting Global Population Growth	308
12. Population Distribution: Urban Living and Sustainable Cities	310
12-1 Urbanization and Urban Growth	311
12-2 Urban Resource and Environmental Problems	317
12-3 Transportation and Urban Development	321
12-4 Urban Land-Use Planning and Control	326
12-5 Solutions: Making Urban Areas More Livable and Sustainable	329
PART IV MAJOR GLOBAL PROBLEMS	
13. Deforestation and Loss of Biodiversity	338
13-1 Forests: Types and Importance	339
13-2 Tropical Deforestation and Loss of Biodiversity	342
13-3 Causes of Tropical Deforestation and the Fuelwood Crisis in Developing Countries	346
13-4 Solutions: Reducing Tropical Deforestation and Fuelwood Shortages	350
13-5 Old-Growth Deforestation in the United States and Canada	356
13-6 Solutions: Individual Action	361
14. Global Warming and Ozone Loss	364
14-1 The Greenhouse Effect, Global Warming, and Climate	365
14-2 Global Warming or Lot of Hot Air? How Serious Is the Threat?	371
14-3 Some Possible Effects of a Warmer World	374
14-4 Solutions: Dealing with the Threat of Global Warming	376
14-5 Ozone Depletion: Is It a Serious Threat?	380
14-6 Solutions: Protecting the Ozone Layer	387
PART V ENERGY RESOURCES	
15. Energy Efficiency and Renewable Energy	394
15-1 Evaluating Energy Resources	395
15-2 The Importance of Improving Energy Efficiency	398
15-3 Ways to Improve Energy Efficiency	401
15-4 Direct Use of Solar Energy for Heat and Electricity	407
15-5 Producing Electricity from Moving Water and from Heat Stored in Water	415
15-6 Producing Electricity from Wind	418
15-7 Producing Energy from Biomass	419

15-8 The Solar-Hydrogen Revolution	423
15-9 Geothermal Energy	425
15-10 Making The Transition to a Sustainable Energy Future	428
16. Nonrenewable Energy Resources	430
16-1 Oil	431
16-2 Natural Gas	436
16-3 Coal	438
16-4 Nuclear Energy	443
16-5 Solutions: A Sustainable Energy Strategy	454
PART VI RESOURCES AND POLLUTION	
17. Air and Air Pollution	462
17-1 The Atmosphere	463
17-2 Urban Outdoor Air Pollution from Smog	464
17-3 Regional Outdoor Air Pollution from Acid Deposition	469
18. Water	488
18-1 Water's Importance and Unique Properties	489
18-2 Supply, Renewal, and Use of Water Resources	490
18-3 Water Resource Problems: Too Little Water and Too Much Water	493
18-4 Using Dams and Reservoirs to Supply More Water	497
18-5 Transferring Water from One Place to Another	500
18-6 Tapping Groundwater and Converting Salt Water to Freshwater	503
18-7 Using Water More Efficiently	506
18-8 Case Study: Water Management in the Columbia River Basin	509
18-9 A Sustainable Water Future	511
19. Water Pollution	514
19-1 Types and Sources of Water Pollution	515
19-2 Pollution of Streams and Lakes	517
19-3 Ocean Pollution	524
19-4 Solutions: Preventing and Reducing Surface-Water Pollution	529
19-5 Groundwater Pollution and Its Prevention	533
19-6 Drinking Water Quality	535
20. Minerals and Soil	540
20-1 Mineral Supplies and Environmental Impacts	541
20-2 Increasing Mineral Resource Supplies	545
20-3 Soil: The Base of Life	547
20-4 Soil Erosion	552
20-5 Solutions: Soil Conservation	557
21. Solid and Hazardous Waste	564
21-1 Wasting Resources: The High-Waste Approach	565
21-2 Increasing Mineral Resource Supplies	567

21-3 Reuse	571
21-4 Recycling	574
21-5 Case Studies: Recycling Aluminum, Wastepaper and Plastics	577
21-6 Detoxifying, Burning, Burying, and Exporting Wastes	579
21-7 Case Studies: Lead, Dioxins, and Chlorine	585
21-8 Hazardous-Waste Regulation in the United States	588
21-9 Achieving a Low-Waste Society	589
PART VII SUSTAINING BIODIVERSITY AND ECOLOGICAL INTEGRITY	
22. Food Resources	594
22-1 How Is Food Produced?	595
22-2 World Food Problems	600
22-3 Increasing World Food Production	606
22-4 Catching or Raising More Fish	610
22-5 Agricultural Policy, Food Aid, and Land Reform	612
22-6 Solutions: Sustainable Agriculture	615
23. Protecting Food Resources: Pesticides and Pest Control	618
23-1 Pesticides: Types and Uses	619
23-2 The Case for Pesticides	621
23-3 The Case Against Pesticides	622
23-4 Pesticide Regulation in the United States	626
23-5 Solutions: Other Ways to Control Pests	628
24. Sustaining Ecosystems: Forests, Rangelands, Parks, and Wilderness	634
24-1 Conservation Biology and Ecological Integrity	635
24-2 Public Lands in the United States	636
24-3 Managing and Sustaining Forests	639
24-4 Forest Resources and Management in the United States	645
24-5 Managing and Sustaining Rangelands	648
24-6 Managing and Sustaining National Parks	653
24-7 Case Study: Partially Restoring the Florida Everglades	656
24-8 Protecting and Managing Wilderness and Other Biodiversity Sanctuaries	657
25. Sustaining Wild Species	664
25-1 Why Preserve Wild Species?	665
25-2 The Rise and Fall of Species	668
25-3 Causes of Depletion and Premature Extinction of Wild Species	673
25-4 Solutions: Protecting Wild Species from Depletion and Extinction	684
25-5 Wildlife Management	690
25-6 Fishery Management and Protecting Marine Biodiversity	693
25-7 Case Study: The Whaling Industry	694
PART VIII ENVIRONMENT AND SOCIETY	
26. Economics and Environment	700

26-1 Economic Goods, Resources, and Systems	701
26-2 Economic Growth and External costs	704
26-3 Solutions: Using Economics to improve Environmental Quality	710
26-4 Solutions: Reducing Poverty	716
26-5 Solutions: Converting to Earth-Sustaining Economies	719
26-6 Case Studies: Ecological and Economic Policies in Germany and the Netherlands	722
27. Politics and Environment	726
27-1 Politics and Environmental Policy	727
27-2 Influencing Environmental Policy	730
27-3 Environmental Groups	732
27-4 The Anti-Environmental Movement	734
27-5 Evaluating Claims of Environmentalists and Anti-Environmentalists	736
27-6 Improving the U.S. Political System	740
27-7 Global Environmental Policy	742
28. Environmental Worldviews Ethics, and Sustainability	746
28-1 Environmental Worldviews in Industrial Societies	747
28-2 Life-Centered and Earth-Centered Environmental Worldviews	749
28-3 Solutions: Living Sustainably	753
