

CONTENTS

An Analytical Technique for Determining the origin of Unidentified Paper	1
I. Introduction	1
II. Test Methods for Paper Analysis and Test Results	2
III. Chromatographic Examination of Paper Fibres for Possible Changes due to Printing Inks, Solvents used as Ink vehicles, Surface Sizing, etc	25
IV. Investigation of the Relationship between the Ions in Paper and the Nature of the Water used in Manufacture	27
V. Control Tests to Check Accuracy of Identification	27
VI. Examples of Paper Analysis in criminal Investigation	29
VII. Summary	31
The Examination and Identification of Inks	
I. Introduction	35
II. Composition and Characteristics of Inks	37
III. The Chemical Examination of Inks	43
Identification of a Typewriter by the Defects of the stroke	
I. Introduction	79
II. The Defects of a Typewriter	80
III. Defects of the Writing	97
IV. Examination Procedure	121
The Application of Gas Chromatography in Forensic Science	
I. Introduction	129
II. Description of Chromatography	130
III. Nomenclature and Definitions	131
IV. Instrumental Requirements of Gas Chromatography	138
V. Application of Gas Chronatography to Toxic Substances	149
VI. Application of Gas Chromatography to Arson Cases	163
Chemical Methods for the Determination of Metals in Forensic Toxicology	
I. General Section	171
II. Typical Metals	179
Determination of Blood Groups in Blood Stains	
I. Introduction	187
II. Investigation of blood Stains in General	188
III. Transport of the Stains from the scene of the crime to the Laboratory	193
IV. Technique of Determination of Blood Groups in Blood Stains	194
V. Court-Room Exhibits	203

VI. New Techniques Recently Proposed	203
VII. Conclusions	205
Some Aspects of Blood Grouping in Cases of Disputed Paternity in Denmark	
I. Introduction	209
II. Problems of Identity	210
III. Laboratory Errors	211
IV. Extent of Information obtainable by Blood Group Determination	219
V. Forensic Evaluation	220
VI. Scandinavian Directions Concerning the Evaluation of Forensic Blood Grouping	223
VII. Conclusion	227
The Determination of Bone Age	
I. Introduction	231
II. Nature of the Resting-Conditions	232
III. Patterns of Bone Structure Decomposition	234
IV. Tests to Estimate the Duration of Deposit	238
V. Conclusion	251
Determination of the Time of Death in the Early Post-mortem Interval	
I. Introduction	253
II. Conventional Methods of Inspection	254
III. Examination of Supravital Reactions	256
IV. Measurement of the Body Temperature	266
V. Time Determinations on the Basis of biochemical changes after Death	269
VI. Application of Haematological Methods	285
VII. Application of Cytological and Histological Methods	286
VIII. Synopsis of Non-conventional Optimum Methods	288
Index	295
