

CONTENTS

Mmethods for Determining Alcohol	
I. Introduction	3
II. Oxidation Methods	5
III. Specific Methods	15
IV. Investigation of the chemical Specificity of the Dichromate Oxidation Method	21
V. Biological specificity	29
VI. Investigation into the Occurrence of Volatile Oxidzable Materials	40
VII. Modern Available Methods	46
VIII. Methods for Determining Alcohol in Breath	53
IX. Factors in the Supervision of a Breath-testing programme	62
X. The Accumulation, Distribution and Elimination of Alcohol from the Body	70
XI. Interpretation of Chemical Tests for Alchol in Drivers	80
XII. Interpretation of chemical Tests for Alcohol in Criminal Cases	91
The Examination of Glass fragments	
I. Introduction	101
II. Interpretation of fractures	107
III. Identification by shape, Size and fit	114
IV. Identification by Physical Properties	119
V. Identification by Chemical Analysis	138
Coloured Fibres in Criminal Investigation with Special Reference to Natural Fibres	
I. Introduction	142
II. The Collecting of Fibres	143
III. The Identification of Fibre Types	145
IV. Analytical Key to Natural Fibres and Fibre Groups	152
V. Catalogue of Natural Fibres with their Properties	153
VI. The Comparison of Fibre Colours	164
VII. The Evidential Value of Fibres	172
IX. Ilustrative Cases	174
Searching for Drug Metabolites in Viscera	
I. Introduction	178
II. Initial Extraction of Viscera	179
III. General Considerations of the Isolation of Drug Metabolites	180
IV. Isolation. Identification and Estimation	182
V. Conclusion	222

Thin-layer Chromatography in forensic Science	
I. Introduction	229
II. Working Methods	230
III. Special Methods	234
The Detection of Soap Abortions	
I. Introduction	249
II. Direct Detection of soap Constituents	250
III. Soap Detection in the Blood	258
IV. Detection of detergents	259
V. Histological Changes Following Soap Abortion or Soap Intoxication	260
VI. Changes in Haemoglobin under the Effect of Soap	262
Infra-red Absorption Spectroscopy in Forensic Toxicological Practice	
I. Introduction	265
II. Instrumentation for Obtaining Spectra	267
III. Sample-handling Techniques	273
IV. Isolation of the Sample	279
V. Inspection of Spectra	283
VI. Reports of Examinations in Fatal Poisoning Cases	285
Recent Advances in the Grouping of Dried Blood and Secretion Stains	
I. Introduction	300
II. ABO Agglutinogens-Indirect Method	300
III. ABO Agglutinogens-Direct Method	303
IV. Discussion	315
V. Technical Aspects of the Direct Method	319
VI. ABO Agglutinins	322
VII. Blood Groups Other than Major ABO Groups	325
VIII. Grouping of Secretion Stains	328
Index	333
