1. Introduction	1
1.1. General summary	1
1.2. Temperature scale and platinum thermoelectric reference standard, Pt-67	3
1.3. Mathematical methods	7
1.4. Material selection and application of data	8
1.5. Acknowledgments	10
1.6. References	10

Noble Metal Thermocouple Combinations

2. Type S: <i>Platinum</i> —10% rhodium alloy versus platinum thermocouples	13
2.1. Material specifications and precautions	13
2.2. Data analyses and comparisons	14
2.3. Reference functions and tables for Type S thermocouples	16
3. Type R: <i>Platinum</i> —13% rhodium alloy versus platinum thermocouples	31
3.1. Material specifications and precautions	31
3.2. Data analyses and comparisons	31
3.3. Reference functions and tables for Type R thermocouples	33
4. Type B: <i>Platinum</i> —30% rhodium alloy versus <i>platinum</i> —6% rhodium alloy thermocouples	47
4.1. Material specifications and precautions	47
4.2. Data analyses and comparisons	48
4.3. Reference functions and tables for Type B thermocouples	50
4.4. Reference functions and tables for the <i>positive</i> thermoelement, Type BP, a <i>platinum</i> —30% rhodium alloy versus platinum, Pt-67	64
4.5. Reference functions and tables for the <i>negative</i> thermoelement, Type BN, a <i>platinum</i> —6% rhodium alloy versus platinum, Pt-67	77

Base Metal Thermocouple Combinations

5. Type E: <i>Nickel</i> —chromium alloy versus <i>copper</i> —nickel alloy thermocouples	90
5.1. Material specifications and precautions	90
5.2. Data analyses and comparisons	90
5.3. Reference functions and tables for Type E thermocouples	92
Reference functions and tables for the <i>positive</i> thermoelement, Type EP, a <i>nickel</i> —chromium alloy versus platinum, Pt-67 (See section 7.4)	
Reference functions and tables for platinum, Pt-67, versus the <i>negative</i> thermoelement, Type EN, a <i>copper</i> —nickel alloy (See section 8.5)	
6. Type J: Iron versus <i>copper</i> —nickel alloy (SAMA) thermocouples	103
6.1. Material specifications and precautions	103
6.2. Data analyses and comparisons	104
6.3. Reference functions and tables for Type J thermocouples	107
6.4. Reference functions and tables for the <i>positive</i> thermoelement, Type JP, iron versus platinum, Pt-67	119
6.5. Reference functions and tables for platinum, Pt-67, versus the <i>negative</i> thermoelement, Type JN, a <i>copper</i> —nickel alloy	128
7. Type K: <i>Nickel</i> —chromium alloy versus <i>nickel</i> —aluminum alloy thermocouples	137
7.1. Material specifications and precautions	137
7.2. Data analyses and comparisons	138
7.3. Reference functions and tables for Type K thermocouples	140
7.4. Reference functions and tables for the <i>positive</i> thermoelement, Type KP, a <i>nickel</i> —chromium alloy versus platinum, Pt-67	153
7.5. Reference functions and tables for platinum, Pt-67, versus the <i>negative</i> thermoelement, Type KN, a <i>nickel</i> —aluminum alloy	166
8. Type T: Copper versus <i>copper</i> —nickel alloy thermocouples	179
8.1. Material specifications and precautions	179
8.2. Data analyses and comparisons	180
8.3. Reference functions and tables for Type T thermocouples	182

	Page
8.4. Reference functions and tables for the <i>positive</i> thermoelement, Type TP, copper versus platinum, Pt-67	189
8.5. Reference functions and tables for platinum, Pt-67, versus the <i>negative</i> thermoelement, Type TN, a <i>copper-nickel</i> alloy	196

Appendices

A1. General introduction	207
A2. Supplementary data for Type S— <i>Platinum-10%</i> rhodium alloy versus platinum thermocouples	208
A2.1. Data for voltage as a function of temperature	208
A2.2. Data for temperature as a function of voltage	220
A3. Supplementary data for Type R— <i>Platinum-13%</i> rhodium alloy versus platinum thermocouples	229
A3.1. Data for voltage as a function of temperature	229
A3.2. Data for temperature as a function of voltage	241
A4. Supplementary data for Type B— <i>Platinum-30%</i> rhodium alloy versus <i>platinum-6%</i> rhodium alloy thermocouples	251
A4.1. Data for voltage as a function of temperature	251
A4.2. Data for temperature as a function of voltage	262
A5. Supplementary data for Type E— <i>Nickel-chromium</i> alloy versus <i>copper-nickel</i> alloy thermocouples	269
A5.1. Data for voltage as a function of temperature	269
A5.2. Data for temperature as a function of voltage	277
A6. Supplementary data for Type J—Iron versus <i>copper-nickel</i> alloy (SAMA) thermocouples	309
A6.1. Data for voltage as a function of temperature	309
A6.2. Data for temperature as a function of voltage	320
A7. Supplementary data for Type K— <i>Nickel-chromium</i> alloy versus <i>nickel-aluminum</i> alloy thermocouples	351
A7.1. Data for voltage as a function of temperature	351
A7.2. Data for temperature as a function of voltage	361
A8. Supplementary data for Type T—Copper versus <i>copper-nickel</i> alloy thermocouples	385
A8.1. Data for voltage as a function of temperature	385
A8.2. Data for temperature as a function of voltage	390

List of Figures

Figure	Page
2.2.1. Deviations of thermoelectric voltages of Type S thermocouples—comparisons of values given in this Monograph to those for typical thermocouples which conform to the previous Type S standard (NBS Circular 561)	15
2.2.2. Deviation of thermoelectric voltages of Type S thermocouples—comparison of values given in this Monograph to experimental data by Bedford et al. (1972)	15
2.2.3. Difference in thermoelectric voltages for Type S thermocouples—comparison of values given in this Monograph to those given in: NBS Circular 561; BSI (B.S. 1826:1952)	15
2.3.1. Thermoelectric voltage for Type S thermocouples	16
2.3.2. Seebeck coefficient for Type S thermocouples	16
2.3.3. Second derivative of thermoelectric voltage for Type S thermocouples	17
3.2.1. Deviations of thermoelectric voltage of Type R thermocouples—comparison of values given in this Monograph to those for typical thermocouples which conform to the previous Type R standard (NBS Circular 561)	32
3.2.2. Deviation of thermoelectric voltages of Type R thermocouples—comparison of values given in this Monograph to experimental data by Bedford et al. (1972)	32
3.2.3. Differences in thermoelectric voltages for Type R thermocouples—comparison of values given in this Monograph to those given in NBS Circular 561; BSI (B.S. 1826:1962)	32
3.3.1. Thermoelectric voltage for Type R thermocouples	33
3.3.2. Seebeck coefficient for Type R thermocouples	33
3.3.3. Second derivative of thermoelectric voltage for Type R thermocouples	34
4.2.1. Deviations in thermoelectric voltages of Type B thermocouples—comparison of values given in this Monograph to those given for thermocouples A, B, and C by Burns and Gallagher (1966)	49
4.2.2. Deviations of thermoelectric voltages of Type BP thermoelements versus platinum, Pt-67—comparison of values given in this Monograph to those given for thermocouple materials A, B, and C by Burns and Gallagher (1966)	49
4.2.3. Deviations of thermoelectric voltages of Type BN thermoelements versus platinum, Pt-67—comparison of values given in this Monograph to those given for thermocouple materials A, B, and C by Burns and Gallagher (1966)	49
4.2.4. Difference in thermoelectric voltages for Type B thermocouples—comparison of values given in this Monograph to those from Burns and Gallagher (1966)	50
4.3.1. Thermoelectric voltage for Type B thermocouples	51
4.3.2. Seebeck coefficient for Type B thermocouples	51
