

# CONTENTS

## Chapter I

<b>Introduction</b> .....	1
<i>J. I. Goldstein, H. Yakowitz, and D. E. Newbury</i>	
I. Evolution of the Scanning Electron Microscope .....	2
II. Evolution of the Electron Probe Microanalyzer .....	9
III. Combination SEM-EPMA .....	14
IV. Outline and Purpose of This Book .....	15
References .....	17
Bibliography of Texts and Monographs in SEM and EPMA ....	18

## Chapter II

<b>Electron Optics</b> .....	21
<i>J. I. Goldstein</i>	
I. Electron Guns .....	21
A. Tungsten Filament Cathode .....	21
B. LaB <sub>6</sub> Rod Cathode .....	26
C. Field Emission Gun .....	28
II. Electron Lenses .....	29
A. General Properties of Magnetic Lenses .....	29
B. Production of Minimum Spot Size .....	32
C. Aberrations in the Electron Optical Column .....	35
D. Design of the Final Lens .....	38
III. Electron Probe Diameter $d_p$ vs. Electron Probe Current $i$ .....	40
A. Calculation of $d_{\min}$ and $i_{\max}$ .....	40
B. High-Resolution Scanning Electron Microscopy .....	44

IV. Depth of Field .....	46
References .....	47

### Chapter III

<b>Electron Beam-Specimen Interaction .....</b>	<b>49</b>
---	-----------

#### *J. I. Goldstein*

I. Electron Scattering in Solids .....	49
II. Electron Range and Spatial Distribution of the Primary Electron Beam .....	52
III. Emitted Electrons—Backscattered Electrons .....	57
IV. Emitted Electrons—Low-Energy Electrons .....	64
V. X-Rays .....	69
A. X-Ray Production .....	69
B. X-Ray Absorption .....	79
C. Depth of X-Ray Production .....	81
VI. Auger Electrons .....	87
VII. Summary—Range and Spatial Resolution .....	91
References .....	92

### Chapter IV

<b>Image Formation in the Scanning Electron Microscope .....</b>	<b>95</b>
--	-----------

#### *D. E. Newbury*

I. The SEM Imaging Process .....	95
II. Signal Detectors .....	100
A. Everhart-Thornley Detector .....	101
B. Solid State Detector .....	103
C. Specimen Current Detection .....	104
D. Detection of Electromagnetic Radiation .....	106
III. Contrast Formation .....	106
A. Atomic Number Contrast .....	107
B. Topographic Contrast .....	110
C. Interpretation of Topographic Images .....	115
IV. Signal Characteristics and Image Quality .....	117
V. Resolution Limitations in the SEM .....	121
A. Signal Limitations .....	122
B. Resolution Limitation due to Beam-Specimen Interactions ..	124

VI. Signal Processing .....	130
A. Black Level Suppression .....	135
B. Nonlinear Amplification (Gamma).....	136
C. Signal Differentiation .....	137
D. Y-Modulation .....	141
VII. Image Defects .....	143
VIII. Electron Penetration Effects in Images .....	146
References .....	147

### Chapter V

## **Contrast Mechanisms of Special Interest In Materials Science .....**

*D. E. Newbury and H. Yakowitz*

I. Introduction .....	149
II. Electron Channeling Contrast .....	150
A. Introduction .....	150
B. The Mechanism of Electron Channeling Contrast .....	150
C. The Electron Channeling Pattern .....	154
D. Electron Optical and Signal Processing Conditions .....	158
E. Electron Channeling Contrast from Polycrystals .....	162
F. Selected Area Channeling Patterns (SACP) .....	170
G. Crystal Perfection Effects on Electron Channeling Patterns ..	176
III. Magnetic Contrast in the SEM .....	180
A. Introduction .....	180
B. Classes of Magnetic Materials .....	180
C. Type I Magnetic Contrast .....	181
D. Type II Magnetic Contrast .....	188
IV. Voltage Contrast .....	198
V. Electron-Beam-Induced Current (EBIC).....	202
VI. Cathodoluminescence .....	204
References .....	208

### Chapter VI

## **Specimen Preparation, Special Techniques, and Applications of the Scanning Electron Microscope .....**

*D. E. Newbury and H. Yakowitz*

I. Specimen Preparation for Materials Examination in the SEM ...	212
II. Stereomicroscopy .....	217

III. Dynamic Experiments in the SEM .....	220
IV. Applications of the SEM .....	228
A. Examination of Fractured Polycrystalline Iron .....	228
B. Failure Analysis of a Composite Consisting of Borsic (Boron-Silicon Carbide) Rods in a Matrix of Plasma-Sprayed Aluminum .....	229
C. Investigation of Returned Lunar Material—Glassy Spherules from Apollo 11 .....	230
D. Analysis of Corrosion Mechanism in a Steam Boiler Tube ..	232
E. Rapid Phase Delineation in a Mineral Specimen .....	234
F. Characterization of Wear Particles and Surface Degradation Produced by Wear in Bearing and Gear Tests ....	234
G. Examination of Human Teeth .....	238
H. Applications of Electron Channeling Contrast to Materials Problems .....	238
I. Examination of Magnetically Written Information with Type I Magnetic Contrast .....	247
J. Applications of Type II Magnetic Contrast .....	250
K. Study of Reliability of Integrated Circuit Chips—Quality Control .....	252
L. Observation of Ferroelectric Domains .....	253
M. Electron-Beam Writing .....	254
References .....	260

### Chapter VII

## **X-Ray Spectral Measurement and Interpretation** .....

*E. Lifshin, M. F. Ciccarelli, and R. B. Bolon*

I. Introduction .....	263
II. Crystal Spectrometers .....	263
A. Basic Design .....	263
B. The X-Ray Detector .....	268
C. Detector Electronics .....	270
III. Solid State X-Ray Detectors .....	274
A. Operating Principles .....	274
B. Pulse Pileup .....	277
C. The Multichannel Analyzer .....	280
IV. A Comparison of Crystal Spectrometers with Solid State X-Ray Detectors .....	281

V. The Analysis of X-Ray Spectral Data .....	285
A. General Considerations .....	285
B. The Background Shape .....	286
C. Characteristic X-Ray Production Efficiencies .....	293
D. Indirect-to-Direct X-Ray Excitation Ratios .....	295
References .....	297

### Chapter VIII

## **Microanalysis of Thin Films and Fine Structure ..** 299

*R. B. Bolon, E. Lifshin, and M. F. Ciccarelli*

I. Introduction .....	299
II. Factors Affecting X-Ray Spatial Resolution .....	300
A. Probe Position and Stability .....	300
B. Probe Current as a Function of Diameter .....	300
C. Electron Beam Penetration and Scattering .....	302
D. Indirect X-Ray Production .....	304
III. Characterizing the X-Ray-Excited Volume .....	305
A. Depth Distribution Profile .....	305
B. Monte Carlo Calculations .....	306
IV. Thin-Film Analysis .....	310
V. Particles, Inclusions, and Fine Structures .....	317
References .....	325

### Chapter IX

## **Methods of Quantitative X-Ray Analysis Used in Electron Probe Microanalysis and Scanning Electron Microscopy ..** 327

*H. Yakowitz*

I. Introduction .....	327
II. The Absorption Factor $k_A$ .....	330
A. Formulation .....	330
B. Expression Used to Calculate $f_p$ .....	331
C. Experimental Results and the $f_p$ Expressions .....	335
III. Atomic Number Correction $k_Z$ .....	343
IV. The Characteristic Fluorescence Correction $k_F$ .....	346
V. The Continuum Fluorescence Correction .....	348
VI. Summary Discussion of the ZAF Method .....	350

VII. The Empirical Method for Quantitative Analysis .....	352
VIII. Comments on Analysis Involving Elements of Atomic Number of 11 or Less .....	356
IX. Quantitative Analysis with Nonnormal Electron-Beam Incidence .....	357
X. Analysis Involving Special Specimen Geometries .....	358
XI. Discussion .....	362
Appendix. The Analysis of an Iron-Silicon Alloy .....	363
References .....	370

### Chapter X

<b>Computational Schemes for Quantitative X-Ray Analysis: On-Line Analysis with Small Computers .....</b>	<b>373</b>
---	------------

*H. Yakowitz*

I. Introduction .....	373
II. Summary of Computational Schemes for Quantitative Analysis ..	374
III. The FRAME Program .....	375
A. Fundamentals of FRAME .....	376
B. Limitations of FRAME .....	381
C. Comparison of Results from FRAME and COR2 .....	382
D. Example Showing On-Line Analysis Using FRAME .....	385
E. Conclusions .....	386
IV. Data Reduction Based on the Hyperbolic Method .....	388
V. Summary .....	399
References .....	399

### Chapter XI

<b>Practical Aspects of X-Ray Microanalysis .....</b>	<b>401</b>
---	------------

*H. Yakowitz and J. I. Goldstein*

I. Grappling with the Unknown .....	402
A. Elemental Identification .....	402
B. Crystal Spectrometer Systems .....	404
C. Elemental Distribution (X-Ray Area Scanning) .....	406
D. Applications of Elemental Identification and Distribution ..	410
II. Specimen Preparation for Quantitative Analysis .....	418
A. Surface Roughness and Polishing .....	418

B. Choice of Coating Material .....	422
C. Standards in Microprobe Analysis .....	423
III. Applications Involving Compositional Analysis .....	426
References .....	432

### Chapter XII

## **Special Techniques in the X-Ray Analysis of Samples** .....

435

*J. I. Goldstein and J. W. Colby*

I. Light Element Analysis .....	435
II. Precision and Sensitivity in X-Ray Analysis .....	443
A. Statistical Basis for Calculating Precision and Sensitivity ...	443
B. Sample Homogeneity .....	445
C. Analytical Sensitivity .....	450
D. Trace Element Analysis .....	451
III. X-Ray Analysis at Interfaces .....	456
A. Spatial Resolution .....	457
B. X-Ray Absorption .....	461
C. X-Ray Fluorescence .....	463
IV. Soft X-Ray Emission Spectra .....	465
V. Thin Films .....	470
Appendix. Deconvolution Technique .....	479
References .....	487

### Chapter XIII

## **Biological Applications: Sample Preparation and Quantitation** .....

491

*James R. Coleman*

I. Sample Preparation .....	491
A. Liquid Samples .....	492
B. Thick Samples .....	492
C. Particles .....	494
D. Single Cells and Cell Organelles .....	495
E. Sections .....	505
F. Microincineration .....	511
G. Coating .....	512
II. Analysis .....	514

A. Qualitative Analysis .....	514
B. Quantitative Analysis .....	516
III. Summary .....	524
References .....	525

*Chapter XIV*

<b>Ion Microprobe Mass Analysis .....</b>	<b>529</b>
---	------------

*J. W. Colby*

I. Basic Concepts and Instrumentation .....	530
II. Ion Microscope .....	530
III. Ion Microprobe .....	532
IV. Production of Ions .....	534
V. Sputtering .....	536
VI. Qualitative Analysis .....	541
VII. Quantitative Analysis .....	548
VIII. Dead-Time Losses .....	552
IX. In-Depth Profiling .....	553
X. Applications .....	563
References .....	570
