

Contents

1. Vectors	1
1.1. Vectors	1
1.2. Vector Components	4
1.3. The Scalar Product	9
1.4. Scalar Product Applications	14
1.5. Other Vector Combinations	20
1.6. Orthogonality and Biorthogonality	26
1.7. Projection Operators	32
1.8. Linear Independence and Dependence	37
1.9. Orthogonalization of Coordinates	40
1.10. Vector Calculus	46
Problems	52
2. Function Spaces	55
2.1. The Function as a Vector	55
2.2. Function Scalar Products and Orthogonality	57
2.3. Linear Independence	63
2.4. Orthogonalization of Basis Functions	67
2.5. Differential Operators	70
2.6. Generation of Special Functions	77
2.7. Function Resolution in a Set of Basis Functions	83
2.8. Fourier Series	90
Problems	98
3. Matrices	101
3.1. Vector Rotations	101
3.2. Special Matrices	109
3.3. Matrix Equations and Inverses	114
3.4. Determinants	119
3.5. Rotation of Coordinate Systems	125
3.6. Principal Axes	133
3.7. Eigenvalues and the Characteristic Polynomial	140

3.8. Eigenvectors	145
3.9. Properties of the Characteristic Polynomial	152
3.10. Alternate Techniques for Eigenvalue and Eigenvector Determination	157
Problems	161
4. Similarity Transforms and Projections	165
4.1. The Similarity Transform	165
4.2. Simultaneous Diagonalization	171
4.3. Generalized Characteristic Equations	176
4.4. Matrix Decomposition Using Eigenvectors	181
4.5. The Lagrange–Sylvester Formula	186
4.6. Degenerate Eigenvalues	191
4.7. Matrix Functions and Equations	199
4.8. Diagonalization of Tridiagonal Matrices	205
4.9. Other Tridiagonal Matrices	211
4.10. Asymmetric Tridiagonal Matrices	216
Problems	221
5. Vibrations and Normal Modes	225
5.1. Normal Modes	225
5.2. Equations of Motion for a Diatomic Molecule	232
5.3. Normal Modes for Nontranslating Systems	240
5.4. Normal Modes Using Projection Operators	246
5.5. Normal Modes for Heteroatomic Systems	252
5.6. A Homogeneous One-Dimensional Crystal	258
5.7. Cyclic Boundary Conditions	264
5.8. Heteroatomic Linear Crystals	271
5.9. Normal Modes for Molecules in Two Dimensions	276
Problems	286
6. Kinetics	289
6.1. Isomerization Reactions	289
6.2. Properties of Matrix Solutions of Kinetic Equations	294
6.3. Kinetics with Degenerate Eigenvalues	300
6.4. The Master Equation	309
6.5. Symmetrization of the Master Equation	315
6.6. The Wegscheider Conditions and Cyclic Reactions	321
6.7. Graph Theory in Kinetics	332
6.8. Graphs for Kinetics	337
6.9. Mean First Passage Times	340
6.10. Evaluation of Mean First Passage Times	346
6.11. Stepladder Models	351
Problems	356

7. Statistical Mechanics	359
7.1. The Wind-Tree Model	359
7.2. Statistical Mechanics of Linear Polymers	366
7.3. Polymers with Nearest-Neighbor Interactions	373
7.4. Other One-Dimensional Systems	379
7.5. Two-Dimensional Systems	385
7.6. Non-Nearest-Neighbor Interactions	389
7.7. Reduction of Matrix Order	393
7.8. The Kinetic Ising Model	399
Problems	407
8. Quantum Mechanics	409
8.1. Hybrid Atomic Orbitals	409
8.2. Matrix Quantum Mechanics	415
8.3. Hückel Molecular Orbitals for Linear Molecules	421
8.4. Hückel Theory for Cyclic Molecules	430
8.5. Degenerate Molecular Orbitals for Cyclic Molecules	437
8.6. The Pauli Spin Matrices	444
8.7. Lowering and Raising Operators	452
8.8. Projection Operators	461
Problems	467
9. Driven Systems and Fluctuations	469
9.1. Singlet-Singlet Kinetics	469
9.2. Multilevel Driven Photochemical Systems	475
9.3. Laser Systems	482
9.4. Ionic Channels	487
9.5. Equilibrium and Stationary-State Properties	493
9.6. Fluctuations about Equilibrium	500
9.7. Fluctuations during Reactions	509
9.8. The Kinetics of Single Channels in Membranes	517
Problems	524
10. Other Techniques: Perturbation Theory and Direct Products	527
10.1. Development of Perturbation Theory	527
10.2. First-Order Perturbation Theory—Eigenvalues	532
10.3. First-Order Perturbation Theory—Eigenvectors	539
10.4. Second-Order Perturbation Theory—Eigenvalues	546
10.5. Second-Order Perturbation Theory—Eigenvectors	550
10.6. Direct Sums and Products	557
10.7. A Two-Dimensional Coupled Oscillator System	564
Problems	571
11. Introduction to Group Theory	573
11.1. Vectors and Symmetry Operations	573

11.2.	Matrix Representations of Symmetry Operations	579
11.3.	Group Operations and Tables	586
11.4.	Properties of Irreducible Representations	594
11.5.	Applications of Group Theory	602
11.6.	Generation of Molecular Orbitals	608
11.7.	Normal Vibrational Modes	615
11.8.	Ligand Field Theory	625
11.9.	Direct Products of Group Elements	632
11.10.	Direct Products and Integrals	640
	Problems	645
