	PAGE
PREFACE	V
VOLUME I.—ITERATION, PROGRAMMING AND ALGEBRAIC EQUATIONS	
I. ACCURACY AND ERROR	
1.1 Introduction	1
1.2 Rounding off	2
1.3 Absolute and relative errors	3
1.4 Error analysis and control	6
1.5 The evaluation of formulae on desk machines	11
1.6 Mistakes	15
Examples I	17
II. ITERATIVE METHODS, WITH APPLICATIONS TO THE SOLUTION OF EQUATIONS	
2.1 Introduction	19
2.2 A simple iterative method	20
2.3 The Newton-Raphson iterative method	26
2.4 General aspects of iterative procedures	31
2.5 Real roots of polynomials	38
2.6 Errors when finding roots of polynomials	41
2.7 Bairstow's method for finding complex roots of polynomials	46
Examples II	50
III. ELEMENTARY PROGRAMMING FOR AUTOMATIC COMPUTERS	
3.1 Introduction	54
3.2 Simple programs	56
3.3 Some programs involving iterative procedures	65
3.4 General comments	75
Examples III	78

IV. SIMULTANEOUS LINEAR ALGEBRAIC EQUATIONS

4.1	Introduction	80
4.2	The method of successive elimination	82
4.3	Choice of pivots and scaling	87
4.4	Inherent error and ill-conditioned equations	92
4.5	A computer program for the method of successive elimination	98
	Examples IV	100

V. MATRIX METHODS

5.1	Matrix algebra	102
5.2	A compact elimination method for the solution of linear equations	105
5.3	The inverse matrix	112
	Examples V	118

VI. EIGENVALUES AND EIGENVECTORS

6.1	Introduction	123
6.2	An iterative method for finding the largest eigen- value	129
6.3	The determination of subdominant eigenvalues and eigenvectors	135
6.4	The iterative solution of linear simultaneous algebraic equations	138
	Examples VI	147

	INDEX	154
--	-------	-----

VOLUME II.—DIFFERENCES INTEGRATION
AND DIFFERENTIAL EQUATIONS

VII. FINITE DIFFERENCES AND THE APPROXIMATE REPRESENTATION OF FUNCTIONS

VIII. POLYNOMIAL INTERPOLATION

IX. NUMERICAL INTEGRATION AND DIFFERENTIATION

X. ORDINARY DIFFERENTIAL EQUATIONS

XI. PARTIAL DIFFERENTIAL EQUATIONS
