

## CONTENT

	<b>Page</b>
<b>I. GENERAL</b>	
1. Introduction	3
2. Some Abstract Concepts and Definitions	7
<b>II. LINEAR APPROXIMATION</b>	
3. Convergence of Polynomial Interpolation	15
4. Least-Squares Approximation. Orthogonal Polynomials	27
5. Chebyshev Least-Squares Approximation	39
6. Determination and Properties of Chebyshev Expansions	47
7. The General Theory of Linear Approximation	61
8. The Exchange Algorithm on a Discrete Point Set	73
9. Calculation of the Linear Approximation on a Continuum	83
10. The Rate of Convergence of Best Approximations	91
<b>III. RATIONAL APPROXIMATION</b>	
11. Continued Fractions	99
12. Interpolation by Rational Functions	105
13. Economization of Continued Fractions	117
14. The Pade Table	125
15. Applications of the $QD$ and $\varepsilon$ Algorithms	131
16. Theory and Calculation of Best Rational Approximations	139
17. Convergence of Rational Approximations	149
<b>IV. MISCELLANEOUS</b>	
18. Theory of General Non-Linear Minimax Approximation	155
19. Spline Functions	163
20. Optimal Approximation of Linear Functionals	169
21. Optimal Approximation by Means of Spline Functions	177
22. An Introduction to $\varepsilon$ -Entropy	183
23. Functions of Many Variables	191
24. Practical Considerations	195
