

Table of Contents

Preface	xiii
1 Introduction	1
1.1 A Brief Review of Tools for Statistical Inference.	1
Notation and Symbolism.	2
The Normal Distribution	4
Estimation.	8
Testing of Hypotheses	9
Experimental Significance.	16
1.2 Principles of Experimental Design	16
Randomization	17
Replication	17
Local Control	17
Blinding	18
Planning the Test Program.	19
1.3 The Role of the Statistician in Research	21
Partnership	21
Client-Consultant Relationship	21
Exercises	22
2 Statistical Sensory Testing.	25
2.1 Psychophysical Aspects of Sensory Data	25
Weber's Law	27
Fechner's Law	27
Stevens' Power Law	28
Thurstone's Law of Comparative Judgment	29
2.2 Scales of Measurement.	30
Hedonic Scale	32
Intensity Rating Scale.	34
Rankings	35
2.3 Scale Structures	35
2.4 Construction of a Scale	37
Edwards' Method of Successive Intervals	38
Scaling of Categories	46
2.5 Distribution of Sensory Data	50
Measures of Shape Distribution	50
Statistical Properties of Subjective Data.	52
Transformation	55
2.6 Selection of Panel Members	57
Criteria Based on Binomial Response	57
Criteria Based on Rating Scale	63

Sequential Analysis	64
Quality Control Chart for Degree of Difference.	69
Exercises	74
3 The Analysis of Variance and Multiple Comparison Tests	77
3.1 Analysis of Variance.	77
Assumptions in the Analysis of Variance.	80
Fixed- and Random-Effects Models.	81
3.2 Multiple-Comparison Tests	98
Least Significant Difference Test	99
Dunnett's Test for Multiple Comparisons with a Control.	100
Tukey's Studentized Range Test	101
Duncan's Multiple-Range Test	103
Choice of Multiple-Comparison Tests.	105
3.3 Sample Size Estimation	107
Sample Size for Confidence Interval Estimation	109
Sample Size for Dichotomous Responses	110
Exercises	111
4 Experimental Design	113
4.1 Simple Comparative Experiments.	113
Group-Comparison Designs.	113
Paired Comparison Designs	115
4.2 Completely Randomized Designs	121
4.3 Randomized Complete Block Designs	124
Randomized Complete Block Designs with More Than One Observation per Experimental Unit.	128
4.4 Latin Square Designs	131
Replicating LS Designs.	134
Partially Replicated Latin Square	138
4.5 Cross-Over Designs	142
4.6 Split Plot Designs	153
Exercises	166
5 Incomplete Block Experimental Designs	169
5.1 Balanced Incomplete Block Designs	169
Parameters of Balanced Incomplete Block Designs	170
Intrablock Analysis	171
Interblock Analysis	177
Combining Intrablock and Interblock Estimates	177
5.2 Balanced Incomplete Block Designs Augmented with a Control.	182
5.3 Doubly Balanced Incomplete Block Designs	187
5.4 Composite Complete-Incomplete Block Designs	194

Intrablock Analysis	198
Exercises	202
6 Factorial Experiments	205
6.1 The 2^n Factorial Experiments	206
6.2 The 3^n Factorial Experiments	216
6.3 The $p \times q$ and $p \times q \times k$ Factorial Experiments	225
6.4 Simple Confounding and Fractional Factorial Experiments	233
Confounding in 2^n Factorial Experiments	234
Fractional Factorial	237
Exercises	244
7 Response Surface Designs and Analysis	247
7.1 General Concepts	247
Construction of Response Surfaces	251
7.2 Fitting of Response Surfaces and Some Design Considerations	256
7.3 Illustrations of Fittings of First- and Second-Order Models	263
7.4 Composite Designs	275
Composite Designs from Fractional Factorials	282
A $1/2$ Replicate of 2^4	282
A $1/4$ Replicate of 2^6	283
7.5 Rotatable Designs	286
Composite Rotatable Designs	292
Arrangements of Composite Designs in Blocks	294
7.6 A Response Surface Analysis Approach for Sensory Data	304
Exercises	308
8 Shelf Life Testing Experiments	311
8.1 Hazard Function	312
8.2 Shelf Life Models	316
Normal Distribution	317
Lognormal Distribution	318
Weibull Distribution	320
Graphical Test for Failure Distributions	328
8.3 Regression Analysis	331
Confidence Intervals	340
Nonlinear Relationships	345
Exercises	348
9 Nonparametric Statistical Methods	351
9.1 Some Methods for Binary Data	351
Tests for Independent Proportions	351

Tests for Dependent Proportions	359
Combining 2×2 Contingency Tables	364
Measure of Association for 2×2 Tables	369
9.2 Some Methods Based on Ranks	370
Rank Tests for Single and Paired Samples	371
Rank Tests for Two Independent Samples	378
Rank Tests for Multiple Independent Samples	389
Rank Tests for Multiple Related Samples	395
Measures of Association for Ranking Data	404
9.3 Some Methods for Categorical Data	414
Contingency Tables and Chi-square Statistics	414
Goodness of Fit Tests	418
Analysis of $r \times c$ Contingency Tables	422
Measures of Association for $r \times c$ Contingency Tables	430
Analysis of Square ($r \times r$) Contingency Tables	433
9.4 Multidimensional Contingency Tables	438
Introduction	438
Simpson's Paradox	439
Tests for Independence	441
Numerical Example for Tests for Independence	443
Exercises	449
10 Sensory Difference and Similarity Tests	455
10.1 Sensory Difference Tests	455
Triangle Test	455
Duo-Trio Test	471
Pair Difference Test (2-AFC)	473
Three-Alternative Forced-Choice Test (3-AFC)	477
A-Not A Test	478
Same-Different Test	484
Comparisons of Difference Test Designs	485
10.2 Sensory Similarity (Equivalence) Tests	496
Introduction	496
Similarity Tests Using Forced-Choice Methods	497
Similarity Tests Using the Paired Comparison Method	498
Similarity Tests Using A-Not A and Same-Different Methods	501
Similarity Tests for Continuous Data	503
Similarity Tests for Correlated Data	506
Hypothesis Test and Confidence Interval for Similarity Evaluation	510
10.3 Replicated Difference and Similarity Tests	514
Introduction	514
The Beta-Binomial (BB) Model	515

Tests Based on the BB Model	522
The Corrected Beta-Binomial (CBB) Model	532
Tests Based on the CBB Model	536
The Dirichlet-Multinomial (DM) Model	540
Tests Based on the DM Model	545
Exercises	552
11 The Method of Paired Comparisons in Sensory Tests and Thurstonian Scaling	559
11.1 Paired Comparison Designs	559
Completely Balanced Paired Comparison Designs	559
Incomplete Balanced Paired Comparison Designs	564
11.2 Paired Comparison Models	571
The Scheffé Model	571
The Bradley—Terry Model	582
The Thurstone—Mosteller Model	596
Choice of Models	605
11.3 Thurstonian Discriminal Distance d'	607
Introduction	607
Estimation of d'	609
Variance of d'	614
Tables and S-PLUS Codes for d' and Variance of d'	620
Confidence Intervals and Tests for d'	621
11.4 Area Under ROC Curve and R -Index	624
Introduction	624
Estimating R -Index and Its Variance	625
Difference Testing Using R -Index	627
Similarity Testing Using R -Index	629
Linking R -Index with d'	630
Same-Different Area Theorem	632
Exercises	635
12 Descriptive Analysis and Perceptual Mapping	641
12.1 Descriptive Analysis	641
12.2 Consumer Tests	642
In-House Consumer Test	642
Home-Use Consumer Test	643
Central Location Consumer Test	644
12.3 Hedonic and Intensity Rating Scales	644
Just-About-Right Rating Scale	645
Signal-to-Noise Ratio	646
Questionnaire Design	653
12.4 Perceptual Mapping	659
Factor Analysis	660

Principal Component Analysis	674
12.5 Preference Mapping	679
Exercises	685
13 Sensory Evaluation in Cosmetic Studies	687
13.1 Experimental Designs	687
Clinical Study Data	688
Self-Controlled Design	691
Parallel Design	698
Cross-Over Design	701
13.2 Regression Analysis	706
Polynomial Regression	706
Nonlinear Regression	710
Fit of Nonlinear Regression Model	718
Exercises	719
Appendix	721
References	829
Index	845
Food Science and Technology: International Series	851
