## TABLE OF CONTENTS.

---

### First Part.

#### MATHEMATICAL INTRODUCTION.

##### CHAPTERS 1—3. SETS OF POINTS.

	Page
<b>Chapter 1. General properties of sets . . . . .</b>	<b>3</b>
1. Sets. — 2. Subsets, space. — 3. Operations on sets. — 4. Sequences of sets. — 5. Monotone sequences. — 6. Additive classes of sets.	
<b>Chapter 2. Linear point sets . . . . .</b>	<b>10</b>
1. Intervals. — 2. Various properties of sets in $R_1$ . — 3. Borel sets.	
<b>Chapter 3. Point sets in <math>n</math> dimensions . . . . .</b>	<b>15</b>
1. Intervals. — 2. Various properties of sets in $R_n$ . — 3. Borel sets. — 4. Linear sets. — 5. Subspace, product space.	
<b>References to chapters 1—3 . . . . .</b>	<b>18</b>

##### CHAPTERS 4—7. THEORY OF MEASURE AND INTEGRATION IN $R_1$ .

<b>Chapter 4. The Lebesgue measure of a linear point set . . . . .</b>	<b>19</b>
1. Length of an interval. — 2. Generalization. — 3. The measure of a sum of intervals. — 4. Outer and inner measure of a bounded set. — 5. Measurable sets and Lebesgue measure. — 6. The class of measurable sets. — 7. Measurable sets and Borel sets.	
<b>Chapter 5. The Lebesgue integral for functions of one variable.</b>	<b>33</b>
1. The integral of a bounded function over a set of finite measure. — 2. $B$ -measurable functions. — 3. Properties of the integral. — 4. The integral of an unbounded function over a set of finite measure. — 5. The integral over a set of infinite measure. — 6. The Lebesgue integral as an additive set function.	
<b>Chapter 6. Non-negative additive set functions in <math>R_1</math> . . . . .</b>	<b>48</b>
1. Generalization of the Lebesgue measure and the Lebesgue integral. — 2. Set functions and point functions. — 3. Construction of a set function. — 4. $P$ -measure. — 5. Bounded set functions. — 6. Distributions. — 7. Sequences of distributions. — 8. A convergence theorem.	

<b>Chapter 7. The Lebesgue-Stieltjes integral for functions of one variable . . . . .</b>	<b>62</b>
---	-----------

1. The integral of a bounded function over a set of finite  $P$ -measure. — 2. Unbounded functions and sets of infinite  $P$ -measure. — 3. Lebesgue-Stieltjes integrals with a parameter. — 4. Lebesgue-Stieltjes integrals with respect to a distribution. — 5. The Riemann-Stieltjes integral.

<b>References to chapters 4—7 . . . . .</b>	<b>75</b>
---	-----------

## CHAPTERS 8—9. THEORY OF MEASURE AND INTEGRATION IN $R_n$ .

<b>Chapter 8. Lebesgue measure and other additive set functions in <math>R_n</math> . . . . .</b>	<b>76</b>
---	-----------

1. Lebesgue measure in  $R_n$ . — 2. Non-negative additive set functions in  $R_n$ . — 3. Bounded set functions. — 4. Distributions. — 5. Sequences of distributions. — 6. Distributions in a product space.

<b>Chapter 9. The Lebesgue-Stieltjes integral for functions of <math>n</math> variables . . . . .</b>	<b>85</b>
---	-----------

1. The Lebesgue-Stieltjes integral. — 2. Lebesgue-Stieltjes integrals with respect to a distribution. — 3. A theorem on repeated integrals. — 4. The Riemann-Stieltjes integral. — 5. The Schwarz inequality.

## CHAPTERS 10—12. VARIOUS QUESTIONS.

<b>Chapter 10. Fourier integrals . . . . .</b>	<b>89</b>
--	-----------

1. The characteristic function of a distribution in  $R_1$ . — 2. Some auxiliary functions. — 3. Uniqueness theorem for characteristic functions in  $R_1$ . — 4. Continuity theorem for characteristic functions in  $R_1$ . — 5. Some particular integrals. — 6. The characteristic function of a distribution in  $R_n$ . — 7. Continuity theorem for characteristic functions in  $R_n$ .

<b>Chapter 11. Matrices, determinants and quadratic forms . . . . .</b>	<b>103</b>
---	------------

1. Matrices. — 2. Vectors. — 3. Matrix notation for linear transformations. — 4. Matrix notation for bilinear and quadratic forms. — 5. Determinants. — 6. Rank. — 7. Adjugate and reciprocal matrices. — 8. Linear equations. — 9. Orthogonal matrices. Characteristic numbers. — 10. Non-negative quadratic forms. — 11. Decomposition of  $\Sigma x_i^2$ . — 12. Some integral formulae.

<b>Chapter 12. Miscellaneous complements . . . . .</b>	<b>122</b>
--	------------

1. The symbols  $O$ ,  $o$  and  $\sim$ . — 2. The Euler-MacLaurin sum formula. — 3. The Gamma function. — 4. The Beta function. — 5. Stirling's formula. — 6. Orthogonal polynomials.

## Second Part.

### RANDOM VARIABLES AND PROBABILITY DISTRIBUTIONS.

#### CHAPTERS 13—14. FOUNDATIONS.

	Page
Chapter 13. Statistics and probability .....	137
1. Random experiments. — 2. Examples. — 3. Statistical regularity. — 4. Object of a mathematical theory. — 5. Mathematical probability.	
Chapter 14. Fundamental definitions and axioms .....	151
1. Random variables. (Axioms 1—2.) — 2. Combined variables. (Axiom 3.) — 3. Conditional distributions. — 4. Independent variables. — 5. Functions of random variables. — 6. Conclusion.	

#### CHAPTERS 15—20. VARIABLES AND DISTRIBUTIONS IN $R_1$ .

Chapter 15. General properties.....	166
1. Distribution function and frequency function. — 2. Two simple types of distributions. — 3. Mean values. — 4. Moments. — 5. Measures of location. — 6. Measures of dispersion. — 7. Tchebycheff's theorem. — 8. Measures of skewness and excess. — 9. Characteristic functions. — 10. Semi-invari- ants. — 11. Independent variables. — 12. Addition of independent variables.	
Chapter 16. Various discrete distributions .....	192
1. The function $\varepsilon(x)$ . — 2. The binomial distribution. — 3. Bernoulli's theorem. — 4. De Moivre's theorem. — 5. The Poisson distribution. — 6. The generalized binomial distribution of Poisson.	
Chapter 17. The normal distribution .....	208
1. The normal functions. — 2. The normal distribution. — 3. Addition of independent normal variables. — 4. The central limit theorem. — 5. Compli- mentary remarks to the central limit theorem. — 6. Orthogonal expansion derived from the normal distribution. — 7. Asymptotic expansion derived from the normal distribution. — 8. The rôle of the normal distribution in statistics.	
Chapter 18. Various distributions related to the normal .....	233
1. The $\chi^2$ -distribution. — 2. Student's distribution. — 3. Fisher's $z$ -distribu- tion. — 4. The Beta distribution.	
Chapter 19. Further continuous distributions .....	244
1. The rectangular distribution. — 2. Cauchy's and Laplace's distributions. — 3. Truncated distributions. — 4. The Pearson system.	

	Page
<b>Chapter 20. Some convergence theorems.....</b>	<b>250</b>
1. Convergence of distributions and variables. — 2. Convergence of certain distributions to the normal. — 3. Convergence in probability. — 4. Tchebycheff's theorem. — 5. Khintchine's theorem. — 6. A convergence theorem.	
<b>Exercises to chapters 15—20 .....</b>	<b>255</b>
 <b>CHAPTERS 21—24. VARIABLES AND DISTRIBUTIONS IN <math>R_n</math>.</b>	
<b>Chapter 21. The two-dimensional case.....</b>	<b>260</b>
1. Two simple types of distributions. — 2. Mean values, moments. — 3. Characteristic functions. — 4. Conditional distributions. — 5. Regression, I. — 6. Regression, II. — 7. The correlation coefficient. — 8. Linear transformation of variables. — 9. The correlation ratio and the mean square contingency. — 10. The ellipse of concentration. — 11. Addition of independent variables. — 12. The normal distribution.	
<b>Chapter 22. General properties of distributions in <math>R_n</math> .....</b>	<b>291</b>
1. Two simple types of distributions. Conditional distributions. — 2. Change of variables in a continuous distribution. — 3. Mean values, moments. — 4. Characteristic functions. — 5. Rank of a distribution. — 6. Linear transformation of variables. — 7. The ellipsoid of concentration.	
<b>Chapter 23. Regression and correlation in <math>n</math> variables.....</b>	<b>301</b>
1. Regression surfaces. — 2. Linear mean square regression. — 3. Residuals. — 4. Partial correlation. — 5. The multiple correlation coefficient. — 6. Orthogonal mean square regression.	
<b>Chapter 24. The normal distribution .....</b>	<b>310</b>
1. The characteristic function. — 2. The non-singular normal distribution. — 3. The singular normal distribution. — 4. Linear transformation of normally distributed variables. — 5. Distribution of a sum of squares. — 6. Conditional distributions. — 7. Addition of independent variables. The central limit theorem.	
<b>Exercises to chapters 21—24 .....</b>	<b>317</b>

### Third Part.

#### STATISTICAL INFERENCE.

#### CHAPTERS 25—26. GENERALITIES.

<b>Chapter 25. Preliminary notions on sampling .....</b>	<b>323</b>
1. Introductory remarks. — 2. Simple random sampling. — 3. The distribution of the sample. — 4. The sample values as random variables. Sampling	

distributions. — 5. Statistical image of a distribution. — 6. Biased sampling. Random sampling numbers. — 7. Sampling without replacement. The representative method.	
<b>Chapter 26. Statistical inference.....</b>	<b>332</b>
1. Introductory remarks. — 2. Agreement between theory and facts. Tests of significance. — 3. Description. — 4. Analysis. — 5. Prediction.	

## CHAPTERS 27—29. SAMPLING DISTRIBUTIONS.

<b>Chapter 27. Characteristics of sampling distributions .....</b>	<b>341</b>
1. Notations. — 2. The sample mean $\bar{x}$ . — 3. The moments $a_s$ . — 4. The variance $m_s$ . — 5. Higher central moments and semi-invariants. — 6. Unbiased estimates. — 7. Functions of moments. — 8. Characteristics of multi-dimensional distributions. — 9. Corrections for grouping.	
<b>Chapter 28. Asymptotic properties of sampling distributions ..</b>	<b>363</b>
1. Introductory remarks. — 2. The moments. — 3. The central moments. — 4. Functions of moments. — 5. The quantiles. — 6. The extreme values and the range.	
<b>Chapter 29. Exact sampling distributions.....</b>	<b>378</b>
1. The problem. — 2. Fisher's lemma. Degrees of freedom. — 3. The joint distribution of $\bar{x}$ and $s^2$ in samples from a normal distribution. — 4. Student's ratio. — 5. A lemma. — 6. Sampling from a two-dimensional normal distribution. — 7. The correlation coefficient. — 8. The regression coefficients. — 9. Sampling from a $k$ -dimensional normal distribution. — 10. The generalized variance. — 11. The generalized Student ratio. — 12. Regression coefficients. — 13. Partial and multiple correlation coefficients.	

## CHAPTERS 30—31. TESTS OF SIGNIFICANCE, I.

<b>Chapter 30. Tests of goodness of fit and allied tests .....</b>	<b>416</b>
1. The $\chi^2$ test in the case of a completely specified hypothetical distribution. — 2. Examples. — 3. The $\chi^2$ test when certain parameters are estimated from the sample. — 4. Examples. — 5. Contingency tables. — 6. $\chi^2$ as a test of homogeneity. — 7. Criterion of differential death rates. — 8. Further tests of goodness of fit.	
<b>Chapter 31. Tests of significance for parameters .....</b>	<b>452</b>
1. Tests based on standard errors. — 2. Tests based on exact distributions. — 3. Examples.	

## CHAPTERS 32—34. THEORY OF ESTIMATION.

<b>Chapter 32. Classification of estimates .....</b>	<b>473</b>
1. The problem. — 2. Two lemmas. — 3. Minimum variance of an estimate.	

Efficient estimates. — 4. Sufficient estimates. — 5. Asymptotically efficient estimates. — 6. The case of two unknown parameters. — 7. Several unknown parameters. — 8. Generalization.	
<b>Chapter 33. Methods of estimation . . . . .</b>	<b>497</b>
1. The method of moments. — 2. The method of maximum likelihood. — 3. Asymptotic properties of maximum likelihood estimates. — 4. The $\chi^2$ minimum method.	
<b>Chapter 34. Confidence regions . . . . .</b>	<b>507</b>
1. Introductory remarks. — 2. A single unknown parameter. — 3. The general case. — 4. Examples.	
 <b>CHAPTERS 35—37. TESTS OF SIGNIFICANCE, II.</b>	
<b>Chapter 35. General theory of testing statistical hypotheses . . . . .</b>	<b>525</b>
1. The choice of a test of significance. — 2. Simple and composite hypotheses. — 3. Tests of simple hypotheses. Most powerful tests. — 4. Unbiased tests. — 5. Tests of composite hypotheses.	
<b>Chapter 36. Analysis of variance . . . . .</b>	<b>536</b>
1. Variability of mean values. — 2. Simple grouping of variables. — 3. Generalization. — 4. Randomized blocks. — 5. Latin squares.	
<b>Chapter 37. Some regression problems . . . . .</b>	<b>548</b>
1. Problems involving non-random variables. — 2. Simple regression. — 3. Multiple regression. — 4. Further regression problems.	
 <b>TABLES 1—2. THE NORMAL DISTRIBUTION . . . . .</b>	<b>557</b>
<b>TABLE 3. THE <math>\chi^2</math>-DISTRIBUTION . . . . .</b>	<b>559</b>
<b>TABLE 4. THE <math>t</math>-DISTRIBUTION . . . . .</b>	<b>560</b>
<b>LIST OF REFERENCES . . . . .</b>	<b>561</b>
<b>INDEX . . . . .</b>	<b>571</b>
