
Contents

<i>Preface</i>		vii
Chapter 1	Introduction	1
Chapter 2	Measurements of central tendency and dispersion	7
2.1	Mean value of a set of observations	7
2.2	Frequency distributions	10
2.3	Standard deviation and variance	16
2.4	Median	20
2.5	Percentiles of a grouped frequency distribution	22
	Exercises	24
Chapter 3	Elementary probability theory	26
3.1	Combinations	26
3.2	Probability	28
3.3	Mutually exclusive events	29
3.4	Independent events	31
3.5	Probability of the sum of two events which are not mutually exclusive	33
3.6	Conditional probability	35
	Exercises	38
Chapter 4	Probability distributions	40
4.1	Binomial distribution	40
4.2	Poisson distribution	48

4.3	Continuous random variables and their probability distributions	53
4.4	The normal distribution	59
4.5	Summary of the properties and applications of some important probability distributions	66
	Exercises	69
Chapter 5	Inference	73
5.1	Introduction	73
5.2	Choosing a random sample	75
5.3	Sampling distribution of the mean	77
5.4	Inferences concerning the population mean (large samples)	80
5.5	Sampling distribution of the difference of means	90
5.6	Sampling distribution of proportions (large samples)	93
5.7	Fisher's F -test for the comparison of variances	94
5.8	Inferences concerning the population mean (small samples)	98
5.9	Student's t -test for the difference of means of small samples	103
5.10	Fitting of distributions and the chi-square test for goodness of fit	108
	Exercises	115
Chapter 6	Introduction to least squares estimation and linear correlation	121
6.1	Fitting a straight line by least squares	121
6.2	Distributions of the parameter estimates	126
6.3	Correlation	130
	Exercises	134
Appendix		137
Table 1	Area under the standard normal curve	138
Table 2	Percentage points of the t -distribution	139
Table 3	Upper percentage points of the F -distribution	140
Table 4	Percentage points of the χ^2 -distribution	146
Table 5	Random numbers	148
	<i>Answers to problems and exercises</i>	151
	<i>Index</i>	155
