PREFACE

NOTATION xi

CHAPTER I. THE ORIGIN AND PRESENTATION OF CHEMICAL DATA

1.1	The origin and nature of quantitative data	2
1.2	Operation of a scale of measurement	4
1.3	Measuring and counting	6
1.4	Units, fixed points and relationship between scales	7
1.5	Dimensions	9
1.6	The presentation of quantitative data	10
1.7	Tabular presentation	11
1.8	Graphical presentation	12
1.9	Graphical representation of more than two variables	21
1.10	Alignment charts	24
1.11	Empirical equations	25

CHAPTER II. MEASUREMENTS OF A SINGLE VARIABLE 27

2.1	The provenance of frequency data	27
2.2	Classification of data—the frequency distribution	30
2.3	Types of frequency distribution	38
	(1) Normal	38
	(2) Non-normal unimodal	39
	(3) J-shaped, U-shaped and rectangular	42
	(4) Irregular	43
2.4	Condensation of data—the sample estimates	44
	(1) Measures of central tendency	46
	(2) Measures of dispersion or variability	52
	(3) Measures of skewness and kurtosis	56
2.5	Computation of the estimates from sample data	57
	(1) Small sample methods	58
	(2) Grouping methods	60
	(3) Graphical methods	69

Notation of Chapter II 69

CHAPTER III. ERRORS, PROBABILITY AND TESTS OF SIGNIFICANCE 72

3.1	The nature of error in experimental science	73
-----	---	----

- 3.2 Probability and random errors
- 3.3 Probability and physico-chemical processes
- 3.4 Sampling distributions
- 3.5 Tests of significance and confidence intervals
 - (1) Tests involving a known standard error
 - (2) Tests involving estimated standard errors
 - (3) The comparison of several samples
 - (4) Some tests on frequencies and proportions
- 3.6 The expression, combination and manipulation of experimental results
 - (1) Expression of results
 - (2) Testing of suspected observations
 - (3) The weighted mean and its confidence limits
 - (4) Propagation of error
 - (5) Tolerance limits

Notation of Chapter III

CHAPTER IV. THE RELATIONSHIP BETWEEN TWO VARIABLES—SIMPLE LINEAR RELATIONSHIPS

- 4.1 Regression, correlation and confluence
- 4.2 The simple regression line
- 4.3 Fitting the least squares line
 - (1) General method
 - (2) Summation method
 - (3) Graphic method
- 4.4 Confidence intervals for the parameters of the simple linear model
 - (1) Tests and confidence intervals for slope and intercept
 - (2) A joint confidence region for slope and intercept
 - (3) Interval estimates for points on the true line
- 4.5 Predictions based on a fitted line
- 4.6 Constrained models and their comparison with the simple regression model
- 4.7 Computations in simple regression with replication
- 4.8 The comparison of several regression lines
- 4.9 The intersection of two regression lines
- 4.10 The correlation model
- 4.11 Tests of significance involving the correlation coefficient
- 4.12 The approximate treatment of associated data
 - (1) The grouping method
 - (2) Three-group analysis
 - (3) The ranking method
 - (4) A control chart method

Notation of Chapter IV

CHAPTER V. THE RELATIONSHIP BETWEEN TWO OR MORE VARIABLES—MULTIPLE, NON-LINEAR AND OTHER RELATIONSHIPS	207
5.1 Multiple linear correlation and regression	207
5.2 The fitting of polynomials. Statistical methods	219
5.3 The fitting of polynomials. Non-statistical methods	233
5.4 Departures from the simple regression model	236
(1) Varying incidence of random error	237
(2) Cumulative values	239
(3) Errors in both variables	240
5.5 Rectification	241
5.6 Miscellaneous curvilinear relationships	244
(1) Hyperbolic equations	244
(2) Exponential and asymptotic regression	251
5.7 Frequency and distribution curves	253
(1) Fitting the Gaussian function	254
(2) Resolving normal distributions	257
(3) Other frequency functions	259
5.8 A least squares solution of simultaneous equations	260
Notation of Chapter V	265
CHAPTER VI. SMOOTHING, INTERPOLATION, DIFFERENTIATION AND INTEGRATION	268
6.1 The smoothing of data	268
(1) Direct methods	269
(2) Difference methods	269
(3) Least squares method for equally spaced values	277
(4) Other methods	280
6.2 Interpolation and extrapolation	280
(1) Direct methods	281
(2) Proportional parts and three-point interpolation	281
(3) The Gregory–Newton method	282
(4) The Newton method	285
(5) Interpolation with two independent variables	286
(6) Other methods and applications	288
6.3 Graphical and tabular differentiation	288
(1) Direct methods	288
(2) Difference methods	290
(3) A semi-graphical method	291
6.4 Graphical and tabular integration	293
(1) The graphical method	293

(2) The equation method	293
(3) The trapezoidal rule and Simpson's rules	293
Notation of Chapter VI	297
CHAPTER VII. DIMENSIONAL ANALYSIS IN PHYSICO-CHEMICAL PROBLEMS	
7.1 Units	299
7.2 Systems of units	301
7.3 Dimensions	302
7.4 Dimensional homogeneity	303
7.5 Systems of dimensions	306
7.6 Some discussion of the length dimension	311
7.7 Dimensionless ratios or numerics	312
7.8 Applications of dimensional theory	316
7.9 The principle of similarity	324
7.10 Partial similarity	327
7.11 Chemical similarity	329
Notation of Chapter VII	331
APPENDIX: TABLES OF STATISTICAL FUNCTIONS	333
Sources and references	333
Table I Ordinates and areas of the Gaussian curve	334
Table II Percentage points of the distributions of t , χ^2 and r	336
Table III Percentage points of the distribution of F	338
Table IV Percentage points of the distribution of M	340
Table V Control chart factors	342
Table VI Percentage points of Dixon's r	343
Table VII Percentage points of the distribution of q	344
Table VIII Two-sided tolerance limit factors, l	346
Table IX The reduction in $\sum \hat{Y}^2$ for significance at the 5% level	347
Table X The transformation of r to z and z to r	348
Table XI Critical values of $\sum d^2$ for rank correlation	349
Table XII Orthogonal polynomials	350
Table XIII Summary of tests of significance	352
EXERCISES	357
REFERENCES	367
GENERAL BIBLIOGRAPHY	371
INDEX	373
