PART I

TECHNIQUES OF COMPUTATION

	1
1 Use of Computing Equipment	3
1.1 Aids to computation 3 <i>Desk calculators 3 Mathematical tables 3</i>	
1.2 Calculations with approximate numbers 5 <i>Rounding off 5 Significant figures 5 Error involved in the use of approximate numbers 5</i>	
1.3 Mistakes in computation: How to avoid them 7 <i>Types of inaccuracies 7 How and where mistakes arise 8 Classification of mistakes 8 Precautions 8</i>	
1.4 Exercises (15) 9	
2 Interpolation	12
2.1 General formulae for interpolation 12 <i>Newton's general divided difference formula 12 Lagrange's formula 13</i>	
2.2 Interpolation with equidistant arguments 14 <i>Difference table 14 Newton's formula 17 Linear interpolation 17 Stirling's formula 17 Bessel's formula 18 Everett's formula 18 Estimate of error 18</i>	
2.3 Inverse interpolation 20 <i>Iterative method 21 Reversion of series 21</i>	
2.4 Exercises (14) 22	
3 Numerical Solution of Equations	26
3.1 Methods for locating roots 26 <i>Rolle's theorem 26 Fundamental theorem of algebra 26 Descartes' rule of signs 26 Sturm's theorem 26</i>	
3.2 Equations in one unknown 27 <i>Regula falsi 27 Newton-Raphson method 28 Method of straightforward iteration 29 Graeffe's root-squaring method 30</i>	
3.3 Equations in more than one unknown 32 <i>Newton-Raphson's method 32 Method of straightforward iteration 33</i>	
3.4 Exercises (10) 33	
4 Numerical Differentiation and Integration	35
4.1 Numerical differentiation 35	
4.2 Numerical integration 38 <i>Trapezoidal rule 39 Simpson's one-third rule 39 Weddle's rule 39 General formula</i>	

	<i>for quadrature</i> 40 <i>Gauss's formula</i> 41 <i>4.3 Summation</i> 41 <i>The Euler-Maclaurin formula</i> 41 <i>Gregory's formula</i> 42 <i>4.4 Exercises (7)</i> 42	
5	Matrix Calculations	44
	5.0 Definitions and notations 44 5.1 Resolution into triangular factors 46 <i>Pivotal condensation</i> 47 <i>Square-root method</i> 51 5.2 Solution of linear equations 54 <i>Triangular equations</i> 55 <i>Pivotal condensation method</i> 55 <i>Square-root method</i> 57 <i>Iteration</i> 60 5.3 Evaluation of determinants 60 <i>Partitioned determinants</i> 60 5.4 Inversion 61 <i>Use of triangular factorization</i> 61 <i>Inverse of partitioned matrices</i> 64 <i>Iteration</i> 66 5.5 Evaluation of latent roots and vectors 67 <i>Direct method</i> 67 <i>Dominant latent root of real symmetric matrix</i> 67 5.6 Exercises (5) 71	
PART II		
DESCRIPTIVE METHODS		75
1	Presentation of Statistical Data	77
	1.1 Statistical data 77 <i>Statistical population</i> 77 <i>Qualitative and quantitative characteristics</i> 77 <i>Complete enumeration and sampling</i> 78 1.2 Scrutiny of data 79 <i>The need for scrutiny</i> 79 <i>Methods of scrutiny</i> 79 1.3 Presentation of data 80 <i>Tabular presentation</i> 80 <i>Graphic presentation</i> 81 1.4 Exercises (11) 87	
2	Condensation of Univariate Data	94
	2.1 Preparation of frequency tables 94 <i>Choice of class intervals</i> 94 <i>Graphical representation of a frequency distribution</i> 96 <i>Random variables</i> 99 2.2 Summary measures 99 <i>Notation</i> 99 <i>Measures of location</i> 100 <i>Measures of dispersion</i> 102 <i>Moments</i> 105 <i>Computation of central moments</i> 107 <i>Cumulants</i> 109 2.3 Index numbers 111 <i>Average of price relatives</i> 111 <i>Aggregative index numbers</i> 113 2.4 Exercises (85) 116	
3	Standard Discrete Distributions	135
	3.1 Problems of specification and estimation 135 3.2 Binomial distribution 136 <i>Truncated binomial distribution</i> 139 3.3 Poisson distribution 139 <i>Truncated Poisson distribution</i> 142 3.4 Other discrete distributions 142 <i>Negative binomial distribution</i> 142 <i>Logarithmic series distribution</i> 144 <i>Hypergeometric distribution</i> 144 <i>Compound binomial distribution</i> 145 <i>Compound Poisson distribution (Neyman's type A contagious distribution)</i> 145 3.5 Exercises (22) 145	
4	Standard Continuous Distributions	150
	4.1 Uniform distribution 150 4.2 Normal distribution 150 <i>Truncated normal distribution</i> 152 <i>Log-normal distribution</i> 153 <i>Gram-Charlier Type A</i>	

<i>series expansion</i>	153	<i>Normalization</i>	154	4.3 Pearsonian system of distributions	155
<i>Type I</i>	155	<i>Type II</i>	156	<i>Type III</i>	157
<i>Type IV</i>	157	<i>Type V</i>	158	<i>Type VI</i>	158
<i>Type VII</i>	159	4.4 Distributions occurring in sampling theory	161	<i>t distribution</i>	161
<i>Chi-square distribution</i>	161	<i>Variance ratio or F distribution</i>	161	<i>Beta distribution</i>	162
4.5 Mixture of distributions	162	<i>Non-central chi-square distribution</i>	162	<i>Non-central beta distribution of Types I and II</i>	163
4.6 Exercises (36)	163				
5	Bivariate Data: Regression and Correlation				169
5.1	Bivariate distribution	169	<i>Marginal and conditional distribution</i>	169	
	<i>Regression and correlation</i>	170	5.2 Least-squares approximation to regression functions	171	
	<i>Linear approximation</i>	171	<i>Polynomial approximation</i>	173	
	<i>Orthogonal polynomials</i>	173	5.3 Computation of regression and correlation from a bivariate frequency table	174	
	5.4 Bivariate normal distribution	178	5.5 Other measures of correlation	180	
	<i>Rank correlation</i>	180	<i>Point-biserial correlation</i>	180	
	<i>Tetrachoric correlation</i>	181	<i>Grade correlation</i>	181	
	5.6 Exercises (26)	182			
6	Multivariate Data: Multiple Regression and Correlation				196
6.1	Multivariate distribution	196	<i>Linear regression</i>	196	
	6.2 Multiple and partial correlation coefficients	197	6.3 Computation of multiple and partial correlation and regression	198	
	6.4 Multivariate normal distribution	203	6.5 Exercises (7)	204	
7	Analysis of Time Series				212
7.1	Time Series	212	7.2 Trend	212	
	<i>Free-hand smoothing</i>	212	<i>Moving averages</i>	212	
	<i>Polynomial trend</i>	213	<i>Other mathematical functions</i>	221	
	7.3 Seasonal index	223	<i>Ratios to trend</i>	223	
	<i>Link relatives</i>	225	7.4 Cyclical fluctuations	228	
	<i>Periodogram analysis</i>	228	7.5 Correlogram	232	
	<i>Serial correlation</i>	232	<i>Lag correlation</i>	232	
	7.6 Exercises (18)	223			
PART III					
STATISTICAL INFERENCE					
					243
1	Probability				
1.1	Definition	245	<i>Random experiment</i>	245	
	<i>Sample space</i>	246	<i>Event</i>	246	
	1.2 Probability calculus	247	<i>Combination of events</i>	247	
	<i>Conditional probability, stochastic independence</i>	248	1.3 Random variables and probability distributions	249	
	<i>Univariate distributions</i>	249	<i>Bivariate distributions</i>	250	
	<i>p-Variate distributions ($p > 2$)</i>	251	<i>Functions of random variables</i>	252	
	1.4 Mathematical expectations	253	<i>Expectation of sum and product of random variables</i>	253	
	<i>Moments</i>	254	<i>Chebycheff's inequality</i>	254	
	1.5 Limit				

	distributions 255	Definitions 255	Law of large numbers 256	Central limit theorem 256	A theorem on asymptotic normality 257	Convergence in law of a function of random variables 257	1.6 Exercises (11) 258
2	Sampling and Statistical Inference						260
	2.1 Sampling	260	2.2 Use of random sampling numbers	260	Sampling with equal probabilities 261	Sampling with unequal probabilities 261	Sampling from theoretical distributions 262
	2.3 Sampling distribution	263	Mean and dispersion of samples from normal distributions 263	Order statistics 265	Asymptotic sampling distributions 265	Transformation of statistics 267	
	2.4 Estimation	268	Criteria for a good estimate 268	2.5 Testing of hypotheses 269	The nature of statistical hypotheses 269	Procedure for testing a hypothesis 269	Criteria for a good test 270
	2.6 Interval estimation	270	2.7 Tolerance limits 271	2.8 Exercises (24) 272			
3	Estimation						278
	3.1 Method of moments 278	Functions of moments 278	Parameters in a distribution of specified form 278	3.2 Least squares 280	3.3 Maximum likelihood 283	Single parameter 283	Several parameters 286
	3.4 Minimum chi square 289	3.5 Exercises (14) 290					
4	General Methods for Testing Parameters						296
	4.1 Introduction 296	4.2 Use of asymptotically normal estimates 296	Single parameter 296	Several parameters 297	4.3 Likelihood-ratio method 300	4.4 Lagrangian multiplier test 301	4.5 Chi-square test in multinomial distributions 302
	4.6 Exercises (9) 303						
5	Tests of Parameters of Discrete Distributions						305
	5.1 Binomial distribution 305	Test for a specified value of a proportion 305	Test for equality of two proportions 306	Test for equality of k proportions ($k \geq 2$) 307	5.2 Poisson distribution 308	Test for a specified value of the mean 308	Test for equality of two means 309
	Test for equality of k ($k \geq 2$) means 310	5.3 Multinomial distribution 311	Test for specified values of the means of linear functions of frequencies 311	Tests of specified values of cell probabilities 311	Tests of specified values of cell probabilities and marginal probabilities in contingency tables 312	Tests of independence in a contingency table 313	Exact test of independence in a 2×2 contingency table 315
	5.4 Exercises (19) 316						
6	Tests of Parameters of Normal Populations						322
	6.1 Notations 322	Samples from univariate populations 322	Samples from multivariate populations 322	6.2 Tests of means 323	Test for a specified value of a mean 323	Test for the difference of two populations means 324	

<i>Test for a single outlier</i>	325	<i>Test for equality of means of two correlated variates</i>	325
6.3 Tests of variances	326	<i>Test for a specified value of a variance</i>	326
<i>Test for equality of variances in two populations</i>	327	<i>Test for equality of variances of k populations ($k \geq 2$)</i>	328
<i>Test for equality of variances of two correlated variates</i>	329	6.4 Tests of correlations	330
<i>Tests for a specified value of a correlation coefficient</i>	330	<i>Tests for equality of k correlation coefficients ($k \geq 2$)</i>	331
<i>Tests of partial correlation coefficients</i>	332	<i>Test of the hypothesis that a multiple correlation coefficient is zero</i>	333
6.5 Exercises (34)	333		
7 Analysis of Variance			340
7.1 Linear models	340	7.2 Testing linear hypotheses in fixed-effects models	340
<i>Test for a specified value of an estimable linear parametric function</i>	340	<i>Test for specified values of a set of linear parametric functions</i>	341
7.3 Tests of means: one-way classification	342	7.4 Fixed model: two-way classification	344
<i>Main effect and interaction</i>	344	<i>One observation per cell</i>	345
<i>Equal number of observations (two or more) per cell</i>	347	<i>Unequal number of observations per cell</i>	350
7.5 Fixed model: three-way classification	355	7.6 Hierarchical classification	357
7.6 Hierarchical classification	357	7.7 Mixed model: two-way classification	359
7.8 Multiple comparisons	361	<i>Fisher's procedure</i>	361
<i>The Student–Newman–Keuls test</i>	362	<i>Duncan's test</i>	362
<i>Scheffé's test</i>	362	7.9 Tests of regression	362
7.9 Tests of regression	362	<i>Notation</i>	362
<i>Test for linearity of regression on one independent variate</i>	362	<i>Test for assigned linear regression on one variate</i>	364
<i>Comparison of k linear regression functions</i>	365	<i>Tests of multiple regression function</i>	368
7.10 Analysis of covariance	369	7.11 Exercises (34)	373
8 Tests of Models			390
8.1 Goodness of fit	390	<i>Chi-square test of goodness of fit</i>	390
<i>Kolmogorov–Smirnov tests of goodness of fit</i>	392	<i>Tests of normality</i>	394
8.2 Homogeneity: two-sample case	395	<i>Run test</i>	395
<i>Mathiesen's test</i>	396	<i>Dixon's test</i>	396
<i>Wilcoxon's test</i>	398	<i>Randomization test</i>	398
<i>Sign test</i>	399	8.3 Homogeneity: k -samples case ($k \geq 2$)	399
<i>Median test</i>	399	<i>Chi-square test</i>	400
<i>Analysis of variance</i>	401	8.4 Independence	401
<i>Median double-dichotomy test</i>	401	<i>Rank-correlation tests</i>	402
<i>Contingency chi square</i>	403	8.5 Randomness	403
8.5 Randomness	403	<i>Run test</i>	403
<i>Rank correlation test</i>	403	8.6 Statistical control	404
8.6 Statistical control	404	8.7 Exercises (46)	406
8.7 Exercises (46)	406		
9 Multivariate Analysis			412
9.1 Introduction	412	<i>Notations</i>	412
9.2 Tests of the mean vector	413	<i>Test for a specified value</i>	413
<i>Equality of means of correlated variables</i>	414	<i>Equality of two mean vectors</i>	415
9.3 Analysis of dispersion	416	<i>General procedure</i>	416
<i>Equality of k mean vectors ($k \geq 2$)</i>	418	9.4 Tests of the dispersion matrix	420
<i>Equality of k dispersion matrices</i>	420	<i>Independence</i>	421

	<i>Canonical correlation</i> 423	<i>Spherical symmetry</i> 424	<i>Equality of means, of variances, and of covariances</i> 424	9.5 <i>Classification</i> 427	<i>The general problem of classification</i> 427	<i>The multivariate normal case</i> 427	<i>Test for an assigned discriminant function</i> 430	<i>Additional distance due to extra variates</i> 430	9.6 <i>Factor analysis and the method of principal components</i> 431	<i>Factor analysis</i> 431	<i>Principal components</i> 435	9.7 <i>Exercises (23)</i> 436	
10	Sequential Procedures											446	
	10.1 <i>Introduction</i> 446	10.2 <i>Sequential probability ratio test</i> 446	<i>Test for a proportion</i> 447	<i>Test for the mean of a Poisson population</i> 448	<i>Test for the mean of a normal population with known variance</i> 448	<i>Test for the variance of a normal population with known mean</i> 448	10.3 <i>Sequential tests of some composite hypotheses</i> 449	<i>Sequential test of the equality of two proportions</i> 449	<i>Sequential t test</i> 450	10.4 <i>Sequential estimation</i> 450	<i>A two-sample procedure for the mean of a normal population</i> 450	<i>A general sequential procedure for estimation by a confidence set</i> 451	10.5 <i>Exercises (5)</i> 451
