1	Planning Collection of Data	1
1.1	Surveys and experiments 1	
1.2	Operational stages in data collection 2	
1.3	The basic principles 4	
2	Sample Selection	7
2.1	Introduction 7	
2.2	Various methods of drawing samples 7	
	<i>Sampling with probability proportional to size 7 Cluster sampling 8</i>	
2.3	Stratified sampling 9	
	<i>Simple sampling for each stratum 9</i>	
2.4	Multistage sampling 10	
	<i>Simple two-stage sampling 10</i>	
2.5	Composite sampling schemes 11	
2.6	Exercises (4) 11	
3	Estimation in Sample Surveys	13
3.1	Simple sampling 13	
3.2	PPS sampling with replacement 14	
3.3	Combination of unbiased estimates 15	
3.4	Systematic sampling 16	
3.5	Multistage sampling with replacement at the first stage 16	
3.6	Stratified sampling 18	
3.7	Self-weighting designs 19	
3.8	A general estimator for any sampling scheme 20	
	<i>Extension to two-stage sampling 22</i>	
3.9	One-by-one PPS sampling without replacement 23	
3.10	Ratio estimate 24	
3.11	Use of auxiliary characteristics in estimation 25	
	<i>Ratio method 25 Regression method 25</i>	
3.12	Interpenetrating subsamples 27	
3.13	Exercises (14) 28	
4	Balance of Cost and Error	40
4.1	Introduction 40	
4.2	Optimum allocation of samples to strata 41	
4.3	Optimum two-stage design 42	
4.4	Optimum allocation in double sampling 45	
4.5	Optimum plan for non-response resurvey 46	
4.6	Exercises (7) 47	

5	Orthogonal Designs for Comparative Trials	52
	5.1 Orthogonal designs and their analysis 52	
	5.2 Randomized blocks 54	
	5.3 Latin squares 56	
	5.4 Orthogonal Latin squares 58	
	5.5 Exercises (13) 60	
6	Non-orthogonal Designs	66
	6.1 Introduction 66	
	6.2 General analysis of incomplete block designs 66	
	<i>The Q method of analysis</i> 67	
	<i>The P method of analysis</i> 68	
	<i>Designs resolvable into groups of replicates</i> 70	
	6.3 Balanced incomplete blocks 70	
	6.4 Simple lattice 73	
	6.5 Partially balanced incomplete blocks 76	
	<i>Two associate PBIB designs</i> 78	
	<i>t</i> - <i>ple lattice</i> 81	
	6.6 Dual designs: linked blocks 83	
	6.7 Designs for two-way elimination of heterogeneity 85	
	<i>Analysis of general two-way designs without recovery of information from rows and columns</i> 85	
	<i>Youden square</i> 86	
	6.8 Missing plots 88	
	<i>Use of estimates of missing yields</i> 88	
	<i>Use of analysis of covariance</i> 90	
	6.9 Exercises (11) 92	
7	Factorial Experiments in Complete Replicates	102
	7.1 Introduction 102	
	7.2 Main effects and interactions 103	
	<i>Notations and definitions</i> 103	
	7.3 Complete factorial experiments with balanced designs 104	
	7.4 Confounding 107	
	<i>Need for confounding</i> 107	
	<i>Use of finite fields</i> 108	
	7.5 2^m factorial experiment 112	
	7.6 3^m factorial experiment 117	
	7.7 Split-plot design 123	
	7.8 Exercises (14) 127	
8	Factorial Experiments in Fractional Replicates	137
	8.1 Need for fractional replication 137	
	8.2 Fractional replicates of symmetric factorials 137	
	<i>Analysis of a s^m factorial in $1/s^k$ replicate</i> 138	
	<i>Confounding in fractional replicates</i> 139	
	8.3 Designs for exploring response surfaces 141	
	<i>Rotatable designs</i> 143	
	8.4 The method of steepest ascent 146	
	8.5 Exercises (4) 146	
9	Groups of Experiments	151
	9.1 Need for repetition of experiments 151	
	9.2 Statistical analysis 151	
	<i>Tests of homogeneity of experimental error variances</i> 152	
	9.3 Exercises (2) 154
