

# CONTENTS

<b>1 Introduction</b>	<b>1</b>
Statistics	1
Statistical populations	2
Frequency distribution	4
Frequency distribution of attributes	6
Frequency distribution of variates	7
How to construct a frequency distribution of variate	9
<b>2 Population parameters</b>	<b>13</b>
Introduction	13
A parameter	13
The aggregate	14
Proportion	15
<i>Mean, Median, and Mode</i>	16
The arithmetic mean	16
The median	17
The mode	18
Selecting the appropriate average	19
<i>Measures of Variation</i>	20
The range	20
The average deviation	20
The standard deviation	21
<b>3 Probability</b>	<b>25</b>
<i>Sets</i>	25
Subsets	26
The universal set $U$	27
Equality of two sets	27
Operations with sets	28
The union of $A$ and $B$	28
The intersection of $A$ and $B$	28
Complement of set $A$	29
<i>Experiment, Sample Space, and Event</i>	33
Experiment	33
Sample space	34
Event	36

- Probability . . . . . 38
- Probability of an event . . . . . 38
- Rules of probability . . . . . 39
- Rule of addition . . . . . 40
- Rule of addition for mutually exclusive events . . . . . 41
- Conditional probability . . . . . 43
- Rule of multiplication . . . . . 45
- Rule of multiplication for independent events . . . . . 46
- Bayes' rule . . . . . 51
- Random variable . . . . . 57
- Mathematical expectation . . . . . 58
  
- 4 Probability (continued) . . . . . 67**
- Rules of counting . . . . . 67
- The binomial formula . . . . . 76
- The binomial distribution . . . . . 81
- The mean and the standard variation of the binomial distribution . . . . . 83
- The normal distribution . . . . . 86
- The normal curve approximation to the binomial distribution . . . . . 98
  
- 5 Sampling . . . . . 106**
- Simple Random Sample* . . . . . 107
- The use of random numbers . . . . . 108
- A statistic . . . . . 111
- Other Probability Samples* . . . . . 113
- Stratified sample . . . . . 113
- Nonprobability Samples* . . . . . 113
- Convenience sample . . . . . 114
- Judgment sample . . . . . 115
  
- 6 Estimating the population mean from a sample . . . . . 116**
- Pattern of Behavior of Sample Means* . . . . . 116
- Estimating the population mean from a large sample . . . . . 128
- Determining the sample size . . . . . 134
- Estimating the population mean from a small sample . . . . . 136
  
- 7 Test of hypothesis concerning the mean of a population . . . . . 145**
- Two-sided test . . . . . 152
  
- 8 Tests of significance. Differences between means of various samples . . . . . 159**
- The Sampling Distribution of the Difference Between Two Sample Means* . . . . . 159

<i>Test of Hypothesis Concerning the Difference Between Two Sample Means</i> . . . . .	165
Comparing the means of two small-size samples . . . . .	170
<i>Comparing Several Sample Means—Analysis of Variance</i> . . . . .	173
Estimating the population variance—variance within samples . . . . .	174
Estimating population variance—variance between samples . . . . .	175
Summary of the solution . . . . .	180
<b>9 Estimating the population proportion from a sample</b>	<b>183</b>
<i>The Sampling Distribution of the Proportion</i> . . . . .	183
<i>Estimating the Population Proportion</i> . . . . .	194
Determining the sample size . . . . .	199
The distribution of sample proportions and the binomial distribution . . . . .	201
<b>10 Testing hypotheses concerning proportions</b>	<b>205</b>
Testing hypotheses concerning a single proportion . . . . .	205
The sampling distribution of the difference between two sample proportions . . . . .	211
Test by hypotheses concerning the difference between two sample proportions . . . . .	215
Comparison of several proportions—chi square analysis . . . . .	219
<b>11 Linear regression and correlation</b>	<b>228</b>
Simple linear equations . . . . .	228
Simple linear regression . . . . .	230
The graphic method . . . . .	231
The least squares method . . . . .	232
Standard error of the estimate . . . . .	234
Coefficient of correlation . . . . .	235
Correlation and regression, short-cut method . . . . .	238
The significance of correlation . . . . .	240
<b>12 Forecasting with time series</b>	<b>244</b>
Graphic representation of time series . . . . .	246
Nature of variations in time series . . . . .	253
<b>13 Forecasting with time series (continued)</b>	<b>258</b>
<i>Secular Trend</i> . . . . .	258
Straight-line trend . . . . .	258
Shifting the origin of a trend equation . . . . .	262
Converting a trend equation from an annual to a monthly basis . . . . .	264
Exponential trend . . . . .	269

viii      *Contents*

Seasonal variations . . . . .	272
Seasonal adjustment . . . . .	277
The use of seasonal indexes in forecasting . . . . .	279

**Tables**

A—Areas under the normal curve . . . . .	283
B—Values of $F$ .05 vertical degrees of freedom . . . . .	284
C—Values of $F$ .01 vertical degrees of freedom . . . . .	285
D—The $\chi$ distribution . . . . .	286
E—The $t$ -distribution . . . . .	287
G— $r$ at 5% and 1% levels of significance . . . . .	288
H—Squares and square roots . . . . .	289
I—Logarithms . . . . .	297
<b>Answers to questions . . . . .</b>	<b>303</b>
<b>Index . . . . .</b>	<b>309</b>
