

CONTENTS

INTRODUCTION; Units; Errors of Observation; Timing; Calculation of Results; Graphs; Trapezoidal Rule pp. 1-8

PART I

MECHANICS AND PROPERTIES OF MATTER

Exp. 1. Spherometer; Exp. 2. Comparison of Lengths by Travelling Microscopes—Comparison of Yard and Metre; Exp. 3. Funicular Polygon; FRICTION; Exp. 4 (a)-(d). Coefficients of Friction—Horizontal Plane Method—Inclined Plane Method; Exp. 5. Motion of Body down Inclined Plane; Exp. 6 (a)-(c). Experiments with Inclined Plane and Trolley; Exp. 7. Acceleration of Falling Body—Falling Plate Experiment; Exp. 8. Coefficient of Restitution—Dropping Sphere Method; THE BALLISTIC BALANCE; Exp. 9. Comparison of Masses by Ballistic Balance; Exp. 10 (a, b). Coefficient of Restitution by Ballistic Balance; Exp. 11. Work done in depressing Scale Pan attached to Spring (Methods I and II); HARMONIC MOTION; Time of Vibration; Angular Oscillations; General Equation; Exp. 12. Harmonic Motion of Mass attached to Spring—Correction for Mass of Spring; Exp. 13. Study of Motion of Pendulum; Exp. 14. Simple Pendulum—Method of Timing; ROTATION OF A RIGID BODY; Routh's Rule for Moments of Inertia; Theorems on Moments of Inertia; Motion of Free Rigid Body; Exp. 15. Moment of Inertia of Flywheel (Methods I and II); Exp. 16. Motion of Wheel and Axle down Inclined Rails; THE RIGID PENDULUM; Exp. 17. Moment of Inertia of Rigid Pendulum; Exp. 18. Rigid Pendulum with Movable Bob—Determination of "g"; Exp. 19. Variation of Time of Vibration of Rigid Pendulum with Position of Axis; Exp. 20. Kater's Pendulum—Timing by Method of Coincidences; Exp. 21. Bifilar Suspension; ELASTICITY; Exp. 22. Young's Modulus by Stretching Vertical Wire; TORSION OF WIRES AND RODS; Exp. 23. Rigidity, Statical Method; Exp. 24. Rigidity, Dynamical Method; BENDING OF BARS—UNIFORM BENDING; Exp. 25. Young's Modulus by Uniform Bending, Statical Method—Optical Methods of Observation; Exp. 26. Young's Modulus by Bending, Dynamical Method; Exp. 27. Comparison of Elastic Constants—Poisson's Ratio; Exp. 28. Young's Modulus by Non-uniform Bending; Exp. 29. Boyle's Law; SURFACE TENSION; Exp. 30. Surface Tension by Capillary Tube Method; Exp. 31. Surface Tension of Soap Solution (i); Exp. 32. Surface Tension of Soap Solution (ii); Exp. 33. Surface Tension of Soap Solution from Pressure in Bubble; Exp. 34. Surface Tension of Liquid by Torsion Balance; Exp. 35. Viscosity of a Liquid; Additional Exercises—Mechanics and Properties of Matter . . . pp. 9-102

PART II

HEAT

THERMOMETRY; The Mercury Thermometer; Secular Rise of Zero; Temporary Depression of Zero; Exp. 36. Tests of Fixed Points on Mercury Thermometer; **LINEAR EXPANSION**; Exp. 37. Coefficient of Linear Expansion (i); Exp. 38. Coefficient of Linear Expansion (ii); Exp. 39. Coefficient of Linear Expansion (iii); **EXPANSION OF LIQUIDS**; Exp. 40. Coefficient of Dilatation of Liquid, Dilatometer Method; Exp. 41. Weight Thermometer Method; Exp. 42. Hydrostatic Balance Method; Exp. 43. Absolute Expansion, Method of Balancing Columns; Exp. 44. Correction for Emergent Column of Thermometer; **VARIATION OF VOLUME AND PRESSURE OF GASES WITH TEMPERATURE**; Exp. 45. Constant Pressure Air Thermometer (i); Exp. 46. Constant Pressure Air Thermometer (ii); Exp. 47. Constant Volume Air Thermometer; **CALORIMETRY**; Exp. 48. Specific Heat of a Metal, Method of Mixture—Water Equivalent of Thermometer—Water Equivalent of Calorimeter; Exp. 49. Specific Heat of Liquid, Method of Mixture; Exp. 50. Latent Heat of Fusion of Ice; Exp. 51. Latent Heat of Vaporization of Water; Exp. 52. Specific Heat of Bad Conductor; Exp. 53. Specific Heat of Liquid by Method of Cooling; Exp. 54. Newton's Law of Cooling; Exp. 55. Melting Point by Cooling Curve; Exp. 56. Variation of Boiling Point with Pressure; Exp. 57. Variation of Vapour Pressure with Temperature (ii); Exp. 58. Variation of Vapour Pressure with Temperature (iii); **HYGROMETRY**; Exp. 59. (a) Dines's Hygrometer; (b) Regnault's Hygrometer; (c) Wet and Dry Bulb Hygrometer; **THERMAL CONDUCTIVITY**; Exp. 60. Thermal Conductivity of Copper; Exp. 61. Thermal Conductivity of Indiarubber; Exp. 62. Thermal Conductivity of Ebonite; Exp. 63. Mechanical Equivalent of Heat; Additional Exercises—Heat
pp. 103–169

PART III

LIGHT

INTRODUCTORY; Laws of Reflexion and Refraction; Methods of Finding Position of Image; Exp. 64. Illustrations of Laws of Reflexion—Pin Experiments; (a) Law of Reflexion; (b) Position of Image by Reflexion at Plane Surface; (c) Position of Image by Reflexion at Plane Surface; Exp. 65. Illustrations of Laws of Refraction—Pin Experiments; (a) Path of Ray through Rectangular Block; (b) Caustic Curve by Refraction; (c) Construction of Wave Front after Refraction; (d) Position of Image by Refraction at Plane Surface; (e) Refraction through Prism; Exp. 66. Optical Léver; (a) Measurement of Thickness; (b) Measurement of Curvature; Exp. 67. Refractive Index of Glass Block by Microscope; Exp. 68 (a)–(c). Refractive Index of Liquid by Microscope; Exp. 69. Refractive Index of Liquid by Total Reflexion; Exp. 70 (a), (b). Refractive Index of Liquid by Wollaston's Method; **SPHERICAL MIRRORS**; Exp. 71. Radius of Curvature of Concave Mirror (i); Exp. 72 (a), (b). Radius of Curvature of Concave Mirror (ii); Graphical Methods of showing Results; Exp. 73. Radius of Curvature of Convex Mirror (i) by Plane Mirror Method; Exp. 74. Radius of Curvature of Convex Mirror (ii) by Convex Lens Method; Exp. 75. Radius of Curvature of Convex Mirror (iii) by Telescope and Scale Method; **FOCAL LINES BY REFLEXION AT SPHERICAL SURFACE**; Exp. 76 (a), (b). Focal Lines

by Reflexion at Concave Surface; THIN LENSES; Exp. 77. Focal Length of Convex Lens (i) using Distant Object; Exp. 78 (a), (b). Focal Length of Convex Lens (ii) from Distances of Image and Object; Exp. 79 (a), (b). Focal Length of Convex Lens (iii) Plane Mirror Methods; Exp. 80. Focal Length of Convex Lens (iv) from Measurements of l and a ; Exp. 81. Focal Length of Convex Lens (v) from $pq=f^2$; Exp. 82. Focal Length of Concave Lens (i) by Plane Mirror Method; Exp. 83. Focal Length of Concave Lens (ii) by Combination with Convex Lens in contact; Exp. 84. Focal Length of Concave Lens (iii) by Combination with Convex Lens not in contact; Exp. 85. Focal Length of Concave Lens (iv) by Convex Lens and Plane Mirror Method; Exp. 86. Focal Length of Concave Lens (v) by Concave Mirror Method; Exp. 87. Radii of Curvature of Faces of Lens—Boys's Method; Refractive Index of Glass of Lens; Exp. 88. Secondary Focus for Lens; Exp. 89. Refractive Index of Liquid—Concave Mirror Method; Exp. 90 (a), (b). Refractive Index of Liquid—Lens and Plate Method; MAGNIFYING POWERS OF TELESCOPES AND MICROSCOPES; Exp. 91. Magnifying Power of Telescope for Different Distances of Object—Deduction of Magnifying Power for Infinity; Exp. 92. Magnifying Power of Telescope in Normal Adjustment, by Micrometer Eyepiece Method; Exp. 93. Magnifying Power of Telescope in Normal Adjustment, by Goniometer Method; Example; Exp. 94. Magnifying Power of Microscope; Exp. 95. Simple Spectrometer; THE SPECTROMETER; Exp. 96. Angle of Prism and Refractive Index of Glass by Spectrometer; Curvature of Image; Alternative Methods of Focusing and Levelling; Schuster's Method of Focusing; Exp. 97 (a)–(e). Experiments with Thin Prism of Small Angle; Exp. 98 (a)–(c). Critical Angle for Glass of Prism; INTERFERENCE; Exp. 99. Fresnel's Biprism; Exp. 100. Lloyd's Mirror; Exp. 101. Newton's Rings; Exp. 102. Diffraction Grating: (a) Normal Incidence; (b) Minimum Deviation; (c), (d) Divergent and Convergent Light; PHOTOMETRY; Exp. 103. (a) Rumford's Shadow Photometer; (b) Bunsen's Grease-Spot Photometer; (c) Joly's Paraffin Block Photometer; (d) Ritchie's Wedge Photometer; (e) Lummer-Brodhun Photometer; (f) Flicker Photometer; Additional Exercises—Light

pp. 170–266

PART IV

SOUND

Exp. 104. Siren; THE RESONANCE TUBE; Exp. 105 (a), (b). Wave Length of Note and Velocity of Sound in Air by Resonance Tube; Exp. 106. Kundt's Tube; Exp. 107. Transverse Waves along Stretched String; LAWS OF TRANSVERSE VIBRATION OF STRINGS; Exp. 108 (a)–(d). The Monochord; THE RESONATOR; Exp. 109. Variation of Pitch of Resonator with Volume; Exp. 110. Resonator with Variable Neck; Exp. 111. Resonator with Thin Plate Opening; Exp. 112. Resonator with Multiple Openings; Additional Exercises—Sound pp. 267–284

PART V

MAGNETISM AND ELECTRICITY

MAGNETISM—INTRODUCTORY; Composition of Magnetic Moments; Magnetic Force due to Magnet; Correction for Length of Magnet; Ball-ended Magnets; Magnetic Force in Iron; Exp. 113. Magnetic Axis of Disk;

Exp. 114; Magnetometer Test of Inverse Square Law; Exp. 115. Mapping Lines of Magnetic Force; Exp. 116 (a), (b). Force between two Magnetized Needles; Exp. 117. Robison Magnetometer; Exp. 118. M and H; MIRROR MAGNETOMETER; Lamp and Scale Method of Measuring Deflexions; Telescope and Scale Method of Measuring Deflexions; Deduction of Functions of Angle of Deflexion; Exp. 119. Gauss's Verification of Inverse Square Law; Exp. 120. Vibration Magnetometer; Exp. 121. Comparison of Magnetic Moments of Magnets; (a) Deflexion Magnetometer Method; (b) Vibration Magnetometer Method; (c) Sum and Difference Method; Graphically by Parallelogram Law; (d) Torsion Balance Method; Exp. 122. Magnetism induced by Earth's Field pp. 285-321

ELECTRICITY—INTRODUCTORY; Ohm's Law; Kirchhoff's Laws; Electrolysis; International Electric Standards; ELECTRICAL APPARATUS—BATTERIES; Lec anche, Daniell, Accumulator, Clark, Weston Cadmium Cells; GALVANOMETERS; Tangent Galvanometer; Suspended Needle Mirror Galvanometer; Suspended Coil Galvanometer; Astatic Galvanometers; SHUNTS; Universal Shunts; AMMETERS AND VOLTMETERS; Moving Coil Ammeters; Moving Coil Voltmeters; RESISTANCE BOXES; RHEOSTATS; REVERSING KEYS; Exp. 123. Magnetic Force due to Current in Long Straight Wire; Exp. 124. Absolute Measurement of Current and Determination of Electrochemical Equivalent of Copper; The Copper Voltmeter; Exp. 125. Comparison of Electrochemical Equivalents; Exp. 126. Joule's Law—Determination of J; Exp. 127. Comparison of Resistances by Tangent Galvanometer; THEORY OF THE WHEATSTONE BRIDGE; Galvanometer Resistance—Thomson's Method; Battery Resistance—Mance's Method; Exp. 128. Wire Bridge; Specific Resistance of Material of a Wire; Exp. 129. Wheatstone Bridge Box; Exp. 130. Galvanometer Resistance—Thomson's Method; Exp. 131. Battery Resistance—Mance's Method; Exp. 132. Carey Foster's Bridge; (a) Comparison of Two nearly equal Coils; (b) Comparison of Coil of nearly 10 ohms with 1-ohm Standard; Exp. 133. Specific Resistance of Electrolyte; Exp. 134. Variation of Specific Resistance of Electrolyte with Temperature; Exp. 135. The Potentiometer—Comparison of E.M.F.'s of Cells; Exp. 136. Resistance of Battery by Potentiometer; Exp. 137. Comparison of E.M.F.'s by Lumsden's Method; Exp. 138. Comparison of Low Resistances by Potentiometer; Exp. 139. E.M.F. of Thermoelectric Couple—Method I—Method II; Exp. 140. Sensitiveness of Galvanometer—Method I—Method II; Exp. 141. Susceptibility of Iron by Magnetometer Method; Exp. 142. Hysteresis; BALLISTIC GALVANOMETERS; Suspended Needle Ballistic Galvanometer; Moving Coil Ballistic Galvanometer; Correction for Damping—Logarithmic Decrement; Approximate Correction for Damping; THE CAPACITIES OF CONDENSERS; Exp. 143. Comparison of Capacities—Method I; Exp. 144. Comparison of Capacities—Method II, de Sauty's Method; Exp. 145. Absolute Measurement of Capacity; Exp. 146. Measurement of High Resistance, Condenser Method; Exp. 147. Laws of Electromagnetic Induction—Damping Circuit; Exp. 148. Permeability of Iron, Ballistic Method; Demagnetization by Reversals; Exp. 149. Cyclic Test of Iron—Ballistic Method; Exp. 150. Standardization of Earth Inductor; Exp. 151. Experiments with an Earth Inductor; (a) Determination of Dip; (b) Determination of Magnetic Meridian; (c) Determination of V and H; Additional Exercises—Magnetism and Electricity
pp. 322-420
