Preface 11

Editorial Foreword 13

List of Contributors 15

Part One 19

1 Why Teach Physics? 21

1.1 Sir Frederick Dainton 21

1.2 A. Babs Fafunwa 23

1.3 Denis G. Osborne 26

1.4 W. Schaffer 28

1.5 Gerald Holton 31

Part Two Conditions for Learning 41

2 Basic Conditions: The Nature of Learning 43

2.1 Why is science teaching difficult? 43

2.2 Teaching about science or scientific theory 47

2.3 When do we start teaching? 50

2.4 Creating optimum situations for learning 51

3 When to Teach Physics 54

3.1 The development of the child 54

3.2 Other factors 56

3.3 When to teach physics 57

4 Problems of Language in the Teaching of Physics 58

4.1 Language in advanced modes of thought 58

4.2 Generalized concepts 59

4.3 Scientific concepts and the language of science 60

4.4 The problem of certain languages in teaching science 62

4.5 The dilemma for a developing country 63

4.6 The need for closer links between language teaching and science teaching 66

Part Three Approaches to Content and Method 69

5 How to Teach Physics 71

- 5.1 Rate of cooling 71
- 5.2 Teaching physics 73
- 5.3 Learning physics 73
- 5.4 The role of mathematics 76
- 5.5 Techniques of teaching 77
- 5.6 Stages of understanding 79
- 5.7 The influence of objectives on how to teach 80

6 What to Teach: Some General Principles 85

- 6.1 Introductory remarks 85
- 6.2 Educational goals 86
- 6.3 The selection of subject matter 87
- 6.4 Mathematical content of a physics course 91
- 6.5 Laboratory work 94
- 6.6 Conclusion 95

7 What to Teach: The Problem in Developing Countries 96

- 7.1 A plea for an independent outlook 96
- 7.2 The real problem 98
- 7.3 The content of the physics course 99
- 7.4 Conclusion 105

Part Four Physics and the Secondary Curriculum 107

8 Integration 109

- 8.1 Integration and coordination 109
- 8.2 Reasons for integration 109
- 8.3 What makes physics relevant to life? 114
- 8.4 Types of integrated course 115
- 8.5 A sample integrated science course 116

9 The History of Science and its Place in a Physics Course 122

- 9.1 The need for change: the point of view of the professional scientist 122
- 9.2 The need for change: the point of view of the professional historian 123
- 9.3 The dangers 124
- 9.4 The present position 124
- 9.5 Educational merits of an historical approach 125
- 9.6 The use of biographies 126
- 9.7 Another danger warning 128
- 9.8 Implementation 130
- 9.9 Conclusion 133

- 10 Physics and Technology 134**
 - 10.1 Physics and engineering 134
 - 10.2 What industry needs 136
 - 10.3 A criticism of new physics-teaching programmes 137
 - 10.4 Motivation 139
 - 10.5 Incorporation of technology into school physics programmes 139
 - 10.6 Involvement of pupils 142
 - 10.7 Project technology 143
 - 10.8 Nuffield advanced-level physics 149
- 11 Physics and Mathematics 151**
 - 11.1 Introduction 151
 - 11.2 What the customer wants 153
 - 11.3 The need for collaboration in physics and mathematics teaching 154
 - 11.4 The structures of elementary mathematics 156
 - 11.5 The detailed points of association 157
- 12 Physics and Computer Education 161**
 - 12.1 Introduction 161
 - 12.2 Hardware: work with logic circuits 162
 - 12.3 Hardware: work with analog circuits 162
 - 12.4 Software: programming 164
 - 12.5 Software: applications and implications 167

Part Five Learning Resources 169

- 13 Physics Apparatus 171**
 - 13.1 Two notes of warning 171
 - 13.2 Cutting costs according to the cloth 173
 - 13.3 Apparatus for teaching physics 174
 - 13.4 Problems peculiar to developing countries 179
 - 13.5 Apparatus and curriculum development 181
 - 13.6 Local production of apparatus in developing countries 184
 - 13.7 Large-scale production 188
 - 13.8 Internal cooperation 190

- 14 Physics Laboratories 191**
- 14.1 Introduction 191
- 14.2 Laboratories in developing countries 200
- 14.3 The siting of laboratories 200
- 14.4 The structure of laboratories 201
- 14.5 Size, shape and function of laboratories 202
- 14.6 Ancillary rooms 203
- 14.7 Storage of apparatus 205
- 14.8 Services 207
- 14.9 Laboratory furniture 210
- 14.10 Lighting, ventilation and blackout 212
- 14.11 Laboratory organization 213

15 Audio-Visual Teaching Materials 214

- 15.1 Introduction 214
- 15.2 Books 216
- 15.3 Slides and film strips 217
- 15.4 The overhead projector 219
- 15.5 Films 220
- 15.6 Film loops in cassettes 224
- 15.7 Adding sound to visual techniques 225
- 15.8 Radio and television 226
- 15.9 Conclusion 230

Part Six Towards Curriculum Reform 231

16 Mechanisms for Curriculum Reform 233

- 16.1 Background 233
- 16.2 Initiation of reform 234
- 16.3 Local involvement 234
- 16.4 Provision of funds 236
- 16.5 Establishing a science-teaching programme 236
- 16.6 Plan of operation 238
- 16.7 Time factors 240
- 16.8 The kind of course 240
- 16.9 Examinations 241
- 16.10 Implementation 241
- 16.11 Involvement of teachers 242
- 16.12 One method of involving teachers 243
- 16.13 Summary 243

17 Evaluation and Examinations 244

- 17.1 Evaluation of a programme of training 244
- 17.2 Course evaluation 252
- 17.3 Examinations 262

- 18 Teacher Education 269**
- 18.1 Background to the problem: 1 269
- 18.2 Background to the problem: 2 271
- 18.3 Education of physics teachers 275
- 18.4 Pre-service training 276
- 18.5 In-service training 278
- 18.6 Postscript: What kind of teacher training? 280

Appendixes 283

A Case Histories 285

- A.1 East African secondary-school science project 285
- A.2 Integrated and coordinated science courses in New South Wales 292
- A.3 The Nuffield programmes in the United Kingdom 303
- A.4 PSSC and its adaptation for use in Scandinavia 309
- A.5 The Unesco Pilot Project: follow-up and adaptation in Argentina and Bolivia 316
- A.6 New Zealand adaptation of PSSC 323

B Details of Various Projects 328

- B.1 Engineering Concepts Curriculum Project: The Man-Made World 328
- B.2 Harvard Project Physics 333
- B.3 Introduction to Natural Science: The INS Project 337
- B.4 Novosibirsk Project 338
- B.5 Nuffield O-Level Physics Project 347
- B.6 Nuffield Combined Science Project 347
- B.7 Nuffield Secondary Science Project 351
- B.8 Nuffield Advanced Physics Project 354
- B.9 Nuffield Advanced Level Physical Science Project 362
- B.10 Physical Science for Nonscience Students: The PSNS Project 366
- B.11 Portland Integrated Science Project 369
- B.12 PSSC Physics 374
- B.13 Course Development Project in Quantitative Physical Science: the QPS Project 374
- B.14 Scottish Physics Course 376

C Comparative Studies 378

- C.1 The concept of energy 378
- C.2 Optics 387
- C.3 The special theory of relativity 398
