

Chapter 1 THE GALILEAN TRANSFORMATION

1-1	The Speed of Light	1
1-2	The Galilean Transformation	3

Chapter 2 THE LORENTZ TRANSFORMATION

2-1	The Speed of Light	13
2-2	The Lorentz Transformation	16
2-3	The Relativistic Velocity Addition Theorem	22
2-4	Fizeau's Experiment	24

Chapter 3 TIME

3-1	The Nature of Time	27
3-2	The Relativistic Time Interval	27
3-3	Simultaneity	30
3-4	Self-Consistency of the Lorentz Transformation	37
3-5	Time Dilatation	38
3-6	Visual Appearance of a Moving Clock: the Doppler Effect	40
3-7	Cause and Effect	44
3-8	Past, Present, and Future	46

Chapter 4 SPACE

4-1	Length of a Moving Rod	50
4-2	The Paradox of the Pole Vaultler	55
4-3	Lifetime of the Pion	56
4-4	Visual Appearance of a Moving Rod: Aberration	58

Chapter 5 ACCELERATED FRAMES OF REFERENCE

5-1	The Inertial Reference Frame	63
5-2	Behavior of an Accelerated Clock	64
5-3	The Clock (or Twin) Paradox	65
5-4	The Møller Transformation	70
5-5	Application of the Møller Transformation to the Twin Paradox	74
5-6	Contraction of an Accelerated Rigid Rod	78
5-7	Expansion of an Accelerated Elastic Rod	80

Chapter 6 THE INVARIANT INTERVAL AND PROPER TIME

6-1	The Invariant Interval	84
6-2	Proper Time	86
6-3	The Null Interval	87
6-4	Space- and Timelike Intervals	87
6-5	The Principle of Maximum Proper Time; Newton's Law of Inertia	89
6-6	Lorentz Transformation for the Transverse Directions	91

Chapter 7 FOUR-VECTORS

7-1	Three-Dimensional Vectors	94
7-2	Vectors in a Four-Dimensional Space-Time	95
7-3	Proper Velocity and Coordinate Velocity	98
7-4	Proper Acceleration	102
7-5	The Uniformly Accelerated Rocket Ship	104
7-6	Coordinate Acceleration	107

Chapter 8 ENERGY AND MOMENTUM

8-1	The Concept of Mass	111
8-2	Relativistic and Rest Masses	112
8-3	Kinetic Energy, Rest Energy, and Total Energy	115
8-4	Conservation of Momentum	116
8-5	Conservation of Energy in Inelastic Collisions	119
8-6	Inelastic Collision of Identical Objects	124
8-7	Conservation of Energy in General Interactions	127
8-8	Relativistic Description of the Photon	130
8-9	Photons and Waves	133
8-10	The Relativistic Rocket Ship	135

Chapter 9 FORCE AND WORK

9-1	The Proper Force	145
9-2	The Coordinate Force	146
9-3	Work	148
9-4	Systems of Particles	148
9-5	The Paradox of the Right-Angle Lever	150
9-6	Conservation Laws and "Action-at-a-Distance."	152

Chapter 10 ELECTRICITY AND MAGNETISM

10-1	The Concept of the Field	156
10-2	An Electromagnetic Paradox	160
10-3	The Current Four-Vector	166
10-4	Transformation Properties of the Transverse Components of the Electromagnetic Field	168
10-5	Transformation Law for the Longitudinal Components of the Electromagnetic Field	170
10-6	Lorentz Diagrams for the Electromagnetic Field	173

10-7	The Relativistic Electromagnetic Force	174
10-8	Field of a Uniformly Moving Point Charge	175

Chapter 11 CURVED SPACE-TIME AND GRAVITATION

11-1	The Special and General Theories of Relativity	181
11-2	The Equivalence Principle	182
11-3	The Invariant Speed of Light	186
11-4	Behavior of Clocks in a Gravitational Field	186
11-5	Warped Space-Time Graphs	189
11-6	Curved Space-Time Surfaces	192
11-7	The Metric of Space-Time	193
11-8	Local Velocity	194
11-9	Equation of Motion for a Freely Falling Object	195
11-10	Velocity of a Freely Falling Object	198
11-11	Determination of the Metric from the Gravitational Potential	199
11-12	The Schwarzschild Singularity	200
11-13	Time-Independent Linear Gravitational Fields and Surfaces of Revolution	201
11-14	The Uniform Gravitational Field	202
11-15	Gravitational Fields and Curved Surfaces	208
