

CONTENTS

INTRODUCTION	xiii
CHAPTER 1. <i>Galilean Relativity</i>	1
1.1 Introductory Remarks	1
1.2 Principle of Galilean Relativity	2
1.3 Mathematical Formulation of Galilean Relativity	5
1.4 Transformation Formulas	6
SUMMARY: <i>Galilean Relativity</i>	7
CHAPTER 2. <i>Optical Experiments, Constancy of the Velocity of Light</i>	9
2.1 Michelson-Morley Experiment and the Ether Hypothesis	9
2.2 Elastic Corpuscular Hypothesis and Double Stars	11
2.3 Ether Drag Hypothesis and Aberration	12
2.4 Einstein's Postulate	13
SUMMARY: <i>Optical Experiments</i>	16
CHAPTER 3. <i>Lorentz Transformations</i>	17
3.1 The Two Principles of Spectral Relativity	17
3.2 Lorentz Transformations	18
3.3 A Different Derivation of the Lorentz Transformation	20
3.4 Transformations of Differential Operators	22
SUMMARY: <i>Lorentz Transformations</i>	23
CHAPTER 4. <i>The Meaning of the Lorentz Transformation</i>	24
4.1 Relativity of Colocality; Time Dilatation	25
4.2 Relativity of Simultaneity; Lorentz Contraction	26
4.3 Distribution and Synchronization of Clocks	26
4.4 Transformations of Velocities	29
4.5 Transformation of Angles and Frequencies	31
SUMMARY: <i>Consequences of the Lorentz Transformations</i>	33

CHAPTER 5.	<i>Minkowski Space</i>	34
5.1	Time As a Fourth Dimension	34
5.2	Space–Time Continuum; ds^2 As an Invariant	35
5.3	The Clock–Paradox of Minkowski Space	37
5.4	The Complete Lorentz Transformations, Lorentz Group	38
5.5	The Cobalt Experiment	39
	SUMMARY: <i>Minkowski Space</i>	41
CHAPTER 6.	<i>Mathematical Aids and Notation</i>	42
CHAPTER 7.	<i>Particle Dynamics in Minkowski Space</i>	50
7.1	Conservation Principles	50
7.2	Fields and Particles	50
7.3	Introduction of Mass and Momentum	52
7.4	Equations of Motion of a Particle	53
7.5	Mass–Energy Relation	54
7.6	The Action Integral for an Isolated Particle	55
7.7	Interacting Particles in Minkowski Space	56
	SUMMARY: <i>Particle Dynamics in Minkowski Space</i>	60
CHAPTER 8.	<i>The Field Concept</i>	62
8.1	The Field Concept	62
8.2	The Stress–Energy Tensor of the Scalar Field	63
8.3	Equations of Motion of Particles in a Field	64
8.4	Solutions of the Wave Equation	65
8.5	Green’s Function Representation of the Solutions	68
8.6	The Principle of Causality	69
8.7	Motion of the Field Energy	71
	SUMMARY: <i>The Scalar Field</i>	73
CHAPTER 9.	<i>Consequences of the Field Concept</i>	74
9.1	Interference and Diffraction	74
9.2	The Uncertainty Relations	78
9.3	Formulation of Radiation	79
9.4	Motion in a Static Field	80
9.5	Coulomb Scattering	86
	SUMMARY: <i>Consequences of the Field Concept</i>	87
CHAPTER 10.	<i>The Electromagnetic Field</i>	88
10.1	The Basic Equations of the Electromagnetic Field	88
10.2	Energy–Momentum and Angular Momentum	90

	10.3	Equations of Motion of Charged Particles	92
	10.4	Polarization of Light	95
	10.5	The Intrinsic Angular Momentum of Light	96
	10.6	Solutions of the Field Equations	97
	10.7	Radiation and Scattering	98
	10.8	Scattering of Electromagnetic Waves	99
	10.9	Radiation Reaction	100
		SUMMARY: <i>Electromagnetic Field</i>	101
CHAPTER	11.	<i>Spinor Fields</i>	103
	11.1	Representation of the Lorentz Group	103
	11.2	Spinor Field Equation	104
	11.3	Relativistic Invariance	106
	11.4	Energy–Momentum and Angular Momentum	108
	11.5	The Charge–Current Vector	109
	11.6	Solutions of the Spinor Wave Equation	109
	11.7	Interaction of a Spinor Field with the Electromagnetic Field	112
	11.8	Particles and Antiparticles. The Positron.	113
	11.9	The Neutrino Field	114
		SUMMARY: <i>Spinor Fields</i>	116
CHAPTER	12.	<i>The Action Principle</i>	117
	12.1	The Lagrangian Method	117
	12.2	Field Equations	118
	12.3	Conservation Laws	119
	12.4	Interaction Lagrangian	121
		SUMMARY: <i>The Action Principle</i>	122
CHAPTER	13.	<i>Relativity and Quantum Field Theory</i>	123
	13.1	Introduction	123
	13.2	Operator Nature of Observation	123
	13.3	Identification of Observables	124
	13.4	Schwinger’s Action Principle	125
	13.5	Probability Interpretation	127
	13.6	Experimental Justification: Free Fields	128
	13.7	Interacting Fields	134
		SUMMARY: <i>Relativity and Quantum Field Theory</i>	136
CHAPTER	14.	<i>Mathematical Aids for General Relativity</i>	138
	14.1	Geometry and its Forms	138
	14.2	Tensor Analysis	143

CHAPTER 15.	<i>Principle of General Covariance</i>	146
15.1	The Shortcomings of Special Relativity	146
15.2	The Curved Space Concept	147
15.3	The Principle of General Covariance	149
15.4	Laws of Nature in a "Given" Space	149
	SUMMARY: <i>Principle of General Covariance</i>	152
CHAPTER 16.	<i>Principle of Equivalence</i>	153
16.1	The Principle of Equivalence	153
16.2	Immediate Consequences of the Principle of Equivalence	155
16.3	Gravitation of Energy	156
16.4	Identification of g as a Gravitational Field; Geodesic Equation of Motion	158
	SUMMARY: <i>Principle of Equivalence</i>	161
CHAPTER 17.	<i>Field Equations and the Three Experimental Tests</i>	162
17.1	Formulation of Field Equations	162
17.2	Solution of the Field Equations	163
17.3	Planetary Motion	166
17.4	The Bending of Light Rays	168
17.5	Gravitational Red Shift	170
17.6	Further Predictions	171
17.7	The Question of Isotropy in Space	173
	SUMMARY	174
CHAPTER 18.	<i>Selected Topics in General Relativity</i>	175
18.1	Geodesic Postulate Versus Field Equations	175
18.2	The Possibility of a Scalar Field Theory of Gravitation	175
18.3	Stress–Energy Tensoroid	177
18.4	Cosmological Theories	178
18.5	Geometrodynamics	180
	APPENDIX A. <i>The Green's Function</i>	183
	APPENDIX B. <i>Matrices and Operators</i>	186
	PROBLEMS	190
	SOLUTIONS TO PROBLEMS	197
	INDEX	213
