

CONTENTS

I BLACK BODY RADIATION 1

- 1.1 Derivation of the Electromagnetic Waves in a Cavity* 1
- 1.2 Number of Modes Having the Same Frequency* 5
- 1.3 The Radiation Energy Density* 7
- 1.4 Significant Mathematical Processes Used in the Derivation* 10

II FOURIER ANALYSIS 12

- 2.1 Fourier Series* 14
- 2.2 Fourier Transforms* 16
- 2.3 Relation Between the Width of a Function and its Transform* 19
- 2.4 Wave Packets* 21

III DIFFRACTION AND INTERFERENCE OF PHOTONS AND PARTICLES 26

- 3.1 The Photoelectric Effect* 27
- 3.2 The Compton Effect* 29

3.3	<i>Reconciliation of the Photon and Wave Theories of Light</i>	30
3.4	<i>Wave Characteristics of Particles</i>	33
3.5	<i>The Discreteness of Atomic Energy Levels</i>	34
3.6	<i>The Davisson-Germer Experiment</i>	36

IV THE FEYNMAN PATH INTEGRALS AND THE SCHRÖDINGER EQUATION 39

4.1	<i>Electron Diffraction</i>	39
4.2	<i>Diffraction of Light</i>	42
4.3	<i>Particle Probability Amplitudes</i>	44
4.4	<i>The Schrödinger Wave Equation</i>	48
4.5	<i>Particle Waves</i>	51

V USE OF THE WAVE FUNCTION TO OBTAIN PHYSICAL PROPERTIES OF A SYSTEM 54

5.1	<i>Observables</i>	54
5.2	<i>Commutation Relations</i>	58
5.3	<i>Particle Currents</i>	62
5.4	<i>Center of Mass Coordinates</i>	63

VI ONE-DIMENSIONAL PROBLEMS 66

6.1	<i>Particles Incident on a Square Barrier</i>	67
6.2	<i>Unbound and Bound Particles in a Square Well</i>	73
6.3	<i>The Linear Harmonic Oscillator</i>	79

VII THE WKB APPROXIMATION AND THE BOHR-SOMMERFELD QUANTUM CONDITIONS 83

7.1	<i>The Wentzel-Kramers-Brillouin Method</i>	84
7.2	<i>Connection Formulas</i>	87
7.3	<i>Penetration Through a Barrier</i>	90

VIII ELEMENTARY THREE-DIMENSIONAL WAVE FUNCTIONS IN SPHERICAL COORDINATES 94

8.1	<i>General Method for Spherically Symmetric Potentials</i>	95
8.2	<i>Angular Momentum</i>	97
8.3	<i>Angular Momentum Commutation Relations</i>	103
8.4	<i>The Rigid Rotator</i>	105
8.5	<i>The Square Well</i>	107
8.6	<i>The Hydrogen Atom</i>	110
8.7	<i>The Harmonic Oscillator</i>	114

IX PERTURBATION THEORY 117

9.1	<i>First-Order Perturbation Theory</i>	120
9.2	<i>The Helium Atom</i>	123
9.3	<i>Second-Order Perturbation Theory</i>	126
9.4	<i>Degenerate Levels</i>	128
9.5	<i>Dirac Bra and Ket Notation</i>	130
9.6	<i>Variational Method</i>	130

X TIME-DEPENDENT PERTURBATION THEORY 134

10.1	<i>First-Order Time-Dependent Transition Probability</i>	135
10.2	<i>Excitation of Atoms by Ion Bombardment</i>	138
10.3	<i>Absorption of Radiation</i>	140
10.4	<i>General Selection Rules for Spherical Harmonic Wave Functions</i>	141
10.5	<i>Selection Rules for the Harmonic Oscillator Radial Quantum Number</i>	144
10.6	<i>The Hydrogen Atom</i>	145
10.7	<i>Emission</i>	146
10.8	<i>Second-Order Time-Dependent Perturbation Theory</i>	148
10.9	<i>Transitions to or from Unbound Systems</i>	149

XI THE ONE-ELECTRON ATOM 153

11.1	<i>Energy Levels</i>	155
11.2	<i>Orbital Magnetic Moment</i>	157

11.3	<i>Precession in an External Magnetic Field</i>	160
11.4	<i>Force on a Dipole in a Non-Uniform Magnetic Field</i>	161
11.5	<i>Spin-Orbit Interaction</i>	163
11.6	<i>Relativistic Corrections</i>	169
11.7	<i>Spectroscopic Notation</i>	170
11.8	<i>Energy Level Diagrams</i>	171
11.9	<i>Zeeman and Paschen-Back Effects</i>	171
11.10	<i>Hyperfine Structure</i>	178

XII MULTI-ELECTRON ATOMS 183

12.1	<i>Identical Particles — Symmetry</i>	183
12.2	<i>Helium Atom</i>	188
12.3	<i>Complex Atoms</i>	192
12.4	<i>Periodic Table</i>	196
12.5	<i>Spectroscopic Notation — Equivalent Electrons</i>	198
12.6	<i>Energy Levels</i>	202
12.7	<i>J-J Coupling</i>	205
12.8	<i>X Rays</i>	207

XIII MOLECULAR STRUCTURE 212

13.1	<i>Ionic Binding</i>	212
13.2	<i>Covalent Binding — H_2^+ Molecule</i>	214
13.3	<i>The Hydrogen Molecule (Heitler–London Treatment)</i>	217
13.4	<i>Spatial Orientation of Chemical Bonds</i>	220
13.5	<i>Diatomic Molecules</i>	221
13.6	<i>Comparison with Experiment — HCl</i>	227
13.7	<i>Effects of Nuclear Spin</i>	228
13.8	<i>Thermal Distribution of Vibrational and Rotational Levels</i>	231
13.9	<i>Raman Spectra</i>	234

XIV FREE ELECTRON AND BAND THEORY OF METALS 236

14.1	<i>Free Electron Theory</i>	236
14.2	<i>Band Theory</i>	239
14.3	<i>Effective Mass</i>	243

XV ELASTIC SCATTERING THEORY	247
15.1 <i>The Path Integral Formulation of the Scattering Problem</i>	249
15.2 <i>General Formulation of Scattering Problems</i>	251
15.3 <i>The Born Approximation</i>	252
15.4 <i>Simple Applications of the Born Approximation</i>	256
15.5 <i>Qualitative Features of the Born Approximation</i>	258
15.6 <i>Atomic Scattering by the Born Approximation</i>	258
15.7 <i>Scattering by Identical Particles</i>	260
15.8 <i>The Method of Partial Waves</i>	261
15.9 <i>Scattering by Particle Waves of High Orbital Angular Momentum</i>	266
15.10 <i>Neutron-Proton Scattering</i>	269
15.11 <i>Effective Range Theory</i>	271
XVI NUCLEAR FORCES AND MODELS	276
16.1 <i>Nuclear Forces</i>	277
16.2 <i>The Individual Particle Model of the Nucleus</i>	282
16.3 <i>The Compound Nucleus</i>	288
16.4 <i>The Optical Model</i>	290
16.5 <i>The Collective or Unified Model</i>	293
16.6 <i>The Effective Mass of Nucleons Bound in a Potential</i>	300
APPENDIX A THE VIBRATING STRING	302
APPENDIX B MATRICES	305
APPENDIX C REDUCTION OF INFINITE SERIES IN HIGHER ORDER PERTURBATION THEORY	320
APPENDIX D PARITY	322
INDEX	327
