PREFACE	ix
How to Use this Book	xiii
<i>Cross-references and formulae</i>	xiii
<i>Heading Markings</i>	xiii
<i>Bullets</i>	xiii
<i>Exercises and problems</i>	xiii
<i>Proofs</i>	xiv
<i>Notation</i>	xiv
<i>Warning. Asterisks</i>	xiv
1. Revision of Quantum Mechanics	1
1. <i>Basic experimental facts</i>	1
2. <i>Heisenberg's uncertainty principle</i>	2
3. <i>The state function</i>	4
4. <i>Stationary states</i>	8
5. <i>Normalization</i>	8
6. <i>Operators and eigenvalue equations</i>	9
7. <i>The operator \mathbf{p}</i>	12
8. <i>The operator \mathbf{x}</i>	14
9. <i>The Hamiltonian and the Schrödinger equation</i>	15
10. <i>Boundary conditions: quantization</i>	16
11. <i>Degeneracy</i>	17
12. <i>Commuting operators</i>	18
13. <i>Physical meaning of degeneracy</i>	20
14. <i>Exercise: electron in a box</i>	21
15. <i>Time dependence</i>	23
16. <i>Wave and group velocities</i>	24
17. <i>Mean values</i>	28
18. <i>The variational method</i>	29
19. <i>Exercises: the hermitian property. Orthogonality</i>	33
2. Free-electron Theory of Metals	37
1. <i>The one-particle approximation</i>	37
2. <i>Core and metal electrons. Pauli principle</i>	41
3. <i>The free-electron model</i>	44
4. <i>Periodic (Born-von Kármán) boundary conditions</i>	44

5. <i>The wave function: normalization</i>	46
6. <i>The eigenfunctions in three dimensions</i>	48
7. <i>Degeneracy of the levels</i>	49
8. <i>The Fermi energy</i>	52
9. <i>The density of states</i>	54
10. <i>Soft X-rays</i>	57
11. <i>Heat capacities</i>	60
3. The Effect of the Crystal Field in One Dimension:	
	Bloch Functions
	62
1. <i>The use of translational symmetry</i>	62
1. <i>Symmetry operations</i>	63
2. <i>Symmetry operators</i>	64
3. <i>The eigenfunctions of the symmetry operators are eigenfunctions of the hamiltonian</i>	65
4. <i>S-degeneracy</i>	66
5. <i>The importance of continuity</i>	68
2. <i>S-degeneracy of the eigenfunctions of the translations</i>	68
3. <i>Symmetry operations of the linear chain: translations and inversion</i>	71
4. <i>The eigenfunctions of the translations</i>	74
1. <i>Bloch functions</i>	74
2. <i>Continuity: bands</i>	76
5. <i>Quantization of k</i>	77
6. <i>Physical considerations</i>	77
1. <i>The weak-field limit</i>	78
2. <i>The free-atoms limit</i>	78
3. <i>Energy gaps</i>	81
7. <i>The number of eigenfunctions</i>	82
1. <i>The number of different eigenvalues is N</i>	82
2. <i>Periodicity in k</i>	83
3. <i>The number of Bloch functions is N</i>	84
8. <i>The effect of the inversion</i>	85
1. <i>The inversion changes k into $-k$: proof</i>	85
2. <i>The role of the Bloch functions</i>	86
9. <i>Degeneracy of the Bloch functions</i>	86
10. <i>Periodicity of the energy</i>	88
11. <i>Change of interval</i>	89
12. <i>Further properties of the $E(k)$ curve</i>	90
13. <i>Extended and reduced band schemes: Brillouin zones</i>	92
14. <i>Band crossings</i>	97
15. <i>Filling in of the energy states</i>	98
16. <i>Propagation of an electron in the lattice: the periodically repeated scheme</i>	100
17. <i>Bragg reflections</i>	104
18. <i>Conductors and insulators</i>	105
19. <i>Effective mass. Holes</i>	107
20. <i>The wave functions</i>	108
21. <i>Lattice with basis</i>	113

22. Exercise: the energy gap	115
1. Method	115
1. Trial wave function	115
2. Elements of the secular determinant	115
3. The secular determinant	116
4. The wave functions	116
5. The case $H_{12} = 0$	117
6. $H_{12} = 0$ for all $k \neq \frac{1}{2}K_m$	117
7. Results	119
2. Remarks	120
23. The nearly free-electron approximation	121
24. Fourier coefficients of the potential	123
1. Fourier expansion of the potential	124
2. The matrix elements of the potential	125
4. Bloch Functions and Brillouin Zones in Three Dimensions	128
1. Crystal periodicity	128
1. Primitive and unit cells	130
2. Bloch functions in three dimensions	130
3. Scalar product and reciprocal vectors	132
4. Reciprocal lattice	136
5. The Bloch functions in vector notation	141
6. The wave vector	143
7. Symmetry in the reciprocal space	144
8. $E(\mathbf{k}) = E(-\mathbf{k})$: complex conjugation	147
1. Complex conjugation	148
9. The first Brillouin zone	150
10. Brillouin zones of higher order	152
11. Number of states in the Brillouin zone	155
12. Conditions for the faces of the Brillouin zones	156
13. Symmetry elements and the faces of the Brillouin zone	160
14. Energy contours, filling-in of zones, and Fermi surfaces	162
15. Bands, overlaps, conductors, and insulators	170
16. Velocity	173
17. The Brillouin zone for cubic lattices	174
1. Properties of the faces of the f.c.c. Brillouin zone	176
18. Hexagonal close-packed lattice. Jones zones	181
19. Sticking together of bands in the h.c.p. lattice	184
20. Fourier series in three dimensions	189
1. The orthonormal functions	189
2. Expansion of the periodic functions	191
21. Lattice with basis. Structure factor	191
22. The nearly free-electron approximation	193
1. The basic expansion	193
2. Condition for the matrix elements	194
3. Form of the expansion	195
4. The energy gaps	196
5. The structure factor and energy gaps	197

5. Some Applications of Brillouin Zone Theory	200
1. <i>The Jones theory of the Hume-Rothery rules</i>	200
2. <i>Further theories of phase stability</i>	204
3. <i>Peaks in the density of states curves</i>	206
4. <i>Effect of the Fermi energy on lattice parameters</i>	209
6. The Calculation of Band Structures and Fermi Surfaces	211
1. <i>The problem and the basic equations</i>	211
2. <i>The tight-binding method</i>	213
1. <i>The Bloch sums</i>	213
1. <i>Remark</i>	215
2. <i>The energy eigenvalues</i>	216
1. <i>The secular determinant</i>	216
3. <i>Exercise: tight-binding treatment of a linear chain</i>	217
1. <i>Formulae</i>	217
2. <i>The Bloch sums</i>	218
3. <i>Computation of the energy</i>	219
4. <i>s and d bands</i>	222
3. <i>The nearly free-electron and orthogonalized plane waves method</i>	223
4. <i>The cellular method</i>	225
1. <i>The potential. Muffin tins</i>	228
5. <i>The augmented plane wave method (APW)</i>	230
6. <i>Density of states and Fermi surfaces</i>	231
7. <i>Comparison with experiment: heat capacities and de Haas-van Alphen effect</i>	232
1. <i>Density of states and heat capacity</i>	232
2. <i>The de Haas-van Alphen effect</i>	234
8. <i>The band structure and Fermi surface of copper</i>	235
1. <i>The band structure</i>	236
2. <i>The density of states</i>	238
3. <i>The Fermi surface and comparison with de Haas-van Alphen results</i>	239
GENERAL REFERENCES	244
