Chapter I. Basic Experimental Methods of Determining the Thermal Conductivity of	
Liquids and Gases	1
1.1 Definitions and Units of Measurement	1
1.2 Basic Principles and Methods of Measurement of Thermal Conductivity	2
1.3 Experimental Errors in Thermal Conductivity Measurements	12
1.4 Experimental Equipment for the Plane Horizontal Layer Method	24
1.5 Experimental Equipment for the Concentric Cylinder Method	34
1.6 Experimental Equipment for Hot Wire Method	40
1.7 Experimental Equipment for the Dilatometric Method	50
1.8 Experimental Equipment for the Regular Regime Method	55
1.9 The Burhorn Equipment for Nitrogen Plasma in a Temperature Range from 6000 to 13,000° K	60
 Chapter II Review of Thermal Conductivity Equations for Gases	 66
2.1 Kinetic Theory of Gases, Its Application for the Calculation of the Thermal Conductivity	66
2.2 Determination of the Coefficient λ from Experimental Values of Thermal Conductivity	79
2.3 Comparison of Thermal Conductivity of Gases Calculated from Kinetic Theory with Experimental Data	81
2.4 Comparison of Thermal Conductivity of Gases Calculated Using the Sonin Polynomial Expansion Series with Experimental Data	83
2.5 The Insufficiency of Theoretical Relationships for Thermal Conductivity in Dense Gases	87
 Chapter III Determination of the Temperature Dependence of Thermal Conductivity of	
Gases at Atmospheric Pressure	88
3.1 Temperature Dependence of Thermal Conductivity of Diatomic and Polyatomic Gases at Atmospheric Pressure	89
3.2 Generalized Correlations for Thermal Conductivity of Gases with Various Numbers of Atoms at Atmospheric Pressure	90
 Chapter IV. Calculation of the Thermal Conductivity of Gases Under Pressure and of	
Liquefied Gases	98
4.1 Methods of Data Analysis on Thermal Conductivity of Compressed Gases	98

4.2 Thermal Conductivity of a Substance in Gas and Liquid Phases	109
4.3 Experimental Values and Empirical Equations for Thermal Conductivity of Compressed Gases and Liquids	110
4.4 Determination of the Exponent in Thermal Conductivity Equations for Gases Under Pressure	140
4.5 Thermal Conductivity of Air	142
 Chapter V. Thermal Conductivity of Gas Mixtures	 144
5.1 Review of Thermal Conductivity Equations for Mixtures of Chemically Inert Gases at Atmospheric Pressure	145
5.2 Thermal Conductivity of Mixtures of Reactive Gases	164
5.3 Thermal Conductivity of Gas Mixtures at Elevated Pressures	165
 Chapter VI. Methods of Calculating the Thermal Conductivity of a Plasma	 166
6.1 Calculation of the Thermal Conductivity of Nitrogen Plasma at Temperatures up to 13,000° K	166
6.2 Calculation of Thermal Conductivity of Air Plasma at Temperatures up to 12,000° K and Pressures from 0.001 to 1,000 atm	173
 Chapter VII. Thermal Conductivity of Liquids at Atmospheric Pressure	 182
7.1 Empirical Equations for Calculation to Thermal Conductivity of Liquids at Atmospheric Pressure	184
7.2 Theoretical Calculations of Thermal Conductivity of Liquids	188
7.3 Experimental Values of Thermal Conductivity of Liquids as a Function of Temperature	198
 Chapter VIII. Thermal Conductivity of Liquids Under Pressure	 206
 Chapter IX. Thermal Conductivity of Liquid Solutions at Atmospheric Pressure	 211
9.1 Review of Equations for the Thermal Conductivity of Solutions	211
9.2 Composition of Solutions. Weight and Volume Fractions. Calculation Formulas	212
9.3 Limits of Applicability of the Additive Rule for Calculation of Thermal Conductivity of Liquid Solutions	213
 Chapter X. Thermal Conductivity of Aqueous Electrolyte Solutions	 223
 References	 234
